NEW QUESTION: 1
For ECS and RDS instances under different Alibaba Cloud accounts but in the same region, which of the following statements is NOT correct for migrating self-built MySQL databases (running on ECS) to RDS?
A. The data can be imported via the Intranet
B. The data cannot be migrated.
C. The data can be imported by running mysqldump.
D. The data can be imported via the public network.
Answer: C (LEAVE A REPLY)

NEW QUESTION: 2
The Alibaba Cloud CDN can directly accelerate access to the files stored in OSS and reduce OSS traffic costs.
A. False
B. True
Answer: (SHOW ANSWER)

NEW QUESTION: 3
After stopping an Alibaba Cloud Elastic Compute Service (ECS) instance, since the ECS instance is stopped, you will not be charged for anything related to that ECS instance until you start the instance again regardless of which region the instance is located in.
A. False
B. True
Answer: B (LEAVE A REPLY)

NEW QUESTION: 4

You would like to deploy your applications on Alibaba Cloud to meet requirements including cost reduction, improving service availability, fast deployment- and redundant backup Alibaba Cloud_____products can help meet these requirements (Number of correct
answers 3)
A. Elastic Compute Service (ECS) image achieve efficient and convenient deployment.
B. Utilizing Server Load Balancer (SLB) and ECS instances can improve data reliability.
C. Elastic Compute Service (ECS) snapshot satisfies the needs of rapid recovery of applications and data.
D. Utilizing Content Delivery Network (CDN) can meet the demands for redundant backup.
E. Reasonable selection of Regions/Zones meets the location needs of application deployment as well as the demands for redundantly backup critical business applications and data.
Answer: A,B,E (LEAVE A REPLY)

NEW QUESTION: 5
All RDS for MySQL backups are full backups.
A. False
B. True
Answer: (SHOW ANSWER)

NEW QUESTION: 6
The difference between public and private Server Load Balancers (SLBs) is that private SLBs connect to their backend ECS instances using the private network (Intranet) while public SLBs connect to their backend ECS instances using the public network (Internet).
A. False
B. True
Answer: A (LEAVE A REPLY)

NEW QUESTION: 7
Object Storage Service (OSS) supports access logging. A bucket owner can activate access logging for their buckets in the OSS management console. When access logging is activated for bucket A, OSS automatically accesses the request logs for this bucket (in hours) and generates and writes an object to the user-specified bucket B according to certain naming rules. Which of the following statements is true for OSS logging?
A. Buckets A and B can be separate buckets (or a single bucket) but they must belong to the same user
B. Buckets A and B must be the same bucket.
C. Buckets A and B must be different buckets.
D. Buckets A and B can belong to different users.
Answer: A (LEAVE A REPLY)

NEW QUESTION: 8
Alibaba Cloud Elastic Compute Service (ECS) instances in different Security Groups will definitely have no way to communicate with each other.
A. True
B. False
Answer: A (LEAVE A REPLY)

NEW QUESTION: 9
To meet business requirements, a user requires that the backend server of an SLB instance include a primary ECS instance and a secondary ECS instance. When the primary instance is working properly, the traffic is only forwarded to the primary ECS, when the primary instance is down, traffic is switched to the standby instance. In this case, you can create an active/standby server group on the backend of the SLB instance Which kind of listener supports this feature? (Number of correct answers: 2)
A. HTTP
B. UDP
C. HTTPS
D. TCP
Answer: (SHOW ANSWER)

NEW QUESTION: 10
Which of the following privilege is required to manually install Alibaba Clod Security Center on the server?
A. Database Access privilege
B. System administrator privilege
C. FTP service privilege
D. Common user privilege
Answer: D (LEAVE A REPLY)

NEW QUESTION: 11
By using ApsaraDB for RDS to implement read/write splitting, which of the following can be achieved? (Number of correct answers 2)
A. Write requests are distributed to multiple instances.
B. Read requests are distributed to multiple instances.
C. Read/write requests to the database are separated.
D. Both read and write requests are distributed to multiple instance
Answer: A,D (LEAVE A REPLY)

NEW QUESTION: 12
Different Alibaba Cloud VPCs are completely isolated from each other.

By default, the VPCs cannot communicate with each other over Intranet, but you can establish VPN connections via the Internet to achieve interconnection between VPCs.
A. True
B. False
Answer: (SHOW ANSWER)

NEW QUESTION: 13
Many websites have suffered DDoS attacks of different volumes. Therefore, accurate understanding of DDoS attacks is critical to website security protection. Which of the following statements about DDoS attacks is the MOST accurate?
A. The purpose of a DDoS attack is to steal confidential information.
B. A DDoS attacks crack the server's logon password by means of a massive number of attempts.
C. DDoS attacks primarily target databases.
D. The main purpose of a DDoS attack is to prevent the target server from providing normal services. Currently, the DDoS attack is one of the strongest and most indefensible website attacks.
Answer: (SHOW ANSWER)

NEW QUESTION: 14
Alibaba Cloud SLB can distribute user requests to backend ECS instances. These ECS instances must have the same specification (CPU, Memory)
A. False
B. True
Answer: B (LEAVE A REPLY)

NEW QUESTION: 15
Auto Scaling is a management service that can automatically adjust elastic computing resources based on your business needs and policies It supports adding an existing ECS instance into the scaling group but imposes certain requirements on instance region In this case, which of the following statements is true?
A. The instance and the scaling group can be in different regions and zones.
B. Each scaling group can span up to two regions. After adding the ECS instance, the number of regions of all the ECS instances in the scaling group must be no greater than two.
C. The instance and the scaling group must be in the same region and zone.
D. The instance and the scaling group must be in the same region but not necessarily the same zone.
Answer: D (LEAVE A REPLY)

NEW QUESTION: 16

Alibaba Cloud Object Storage Service (OSS) provides multiple file uploading modes for different scenarios, which are_____.
(Number of correct answers: 2)
A. Directly copying to/from OSS using portable disks
B. Upload using the SDK
C. Uploading using the API
D. Direct upload from the OSS management console no matter how large the file is
Answer: A,D (LEAVE A REPLY)

NEW QUESTION: 17
When you create an Alibaba Cloud VPC. a VRouter and a route table will be created automatically. Which of the following statements is NOT correct about the route table?
A. This route table cannot be deleted
B. Each VRouter may have multiple route tables.
C. The routing entries of the route table can not be modified manually.
D. When a VPC is deleted, the corresponding route table is also deleted.
Answer: (SHOW ANSWER)

NEW QUESTION: 18
You have created two Alibaba Cloud VPCs in two different regions To establish communication between these two VPCs via the Intranet, you can_____.
A. Use CEN to establish communication between VPCs
B. Use the VRouter to create a new route table to enable the communication
C. No operation is needed, as VPCs under the same account are connected through the Intranet by default
D. Create a new access rule through the Security Group to enable the communication
Answer: A (LEAVE A REPLY)

NEW QUESTION: 19
Many cloud computing service providers support users to activate/create a cloud service through Open API. Which of the following protocols is most not likely to be supported by these Open API?

A. HTTP
B. Restful
C. PPPoE
D. Web Service
Answer: C (LEAVE A REPLY)

NEW QUESTION: 20
A large enterprise wants to migrate the entire business system to Alibaba Cloud to save the overall IT procurement and O&M costs From the security aspect, the company requires that
1. Must support secured remote O&M because the administrator often takes business trips.
2. Networks between subsystems should be isolated because subsystems are independently used by different departments Which of the followings should be used together to meet the company's requirements? (Number of correct answers: 3)
A. Use the security group function of the ECS instance, and respectively deploy ECS instances running different subsystems to independent security groups.
B. Build an independent ECS instance as the bastion host or remote logon and O&M, and authorize the bastion host to access ECS instances running other subsystems.
C. Enable the VPN on the bastion host (or directly use the VPN image on Alibaba Cloud Marketplace). The administrator uses VPN encrypted communication during O&M.
D. Create multiple ECS instances in the VPC to install subsystems of different departments- Allocate only Intranet IP addresses to all ECS instances, and deploy them in the same security groups.
Answer: B,C,D (LEAVE A REPLY)

NEW QUESTION: 21
The backend server pool of an Alibaba Cloud SLB contains multiple ECS instances, which may have different service capacities. To exploit the different service capacities of backend ECS instances, which of the following statements is correct?
A. Choose Round-Robin model and ECS instances with higher capacities will surely be assigned with more requests.
B. Choose Weighted Least-Connection mode, and ECS instances with higher capacities will surely be assigned with more requests.
C. SLB cannot assign more requests to certain ECS instances.
D. Choose Weighted Round Robin mode to set higher weights to ECS instances with higher capacities The higher the weight of the backend ECS instance the higher chance that the instance will receive requests.
Answer: D (LEAVE A REPLY)

NEW QUESTION: 22

A popular worldwide forum stores static resources in OSS and accelerates access using CON Users find that the speed of downloading files from the forum has been greatly improved, but uploading files is slow due to the long data transmission distance, resulting in a bad access experience In order to improve the speed of uploading files for users in this forum, so that users in different regions can have a good access experience, we recommend that the forum can_____.

A. Enable OSS static website hosting

B. Activate OSS in different regions as file storage, and synchronize data between OSS in different regions through cross-region replication

C. Enable the transmission acceleration service for O: Enable OSS

D. Activate the PCDN service

Answer: B (LEAVE A REPLY)

NEW QUESTION: 23

Alibaba Cloud Server Load Balancer (SLB) provides services for distributing traffic among multiple ECS instances SLB can expand the application system's service capacity through traffic distribution, and improve the system's availability by eliminating SPoFs (Single Points of Failure). Which of the following statements are correct? (Number of correct answers; 2)

A. When recreating an SLB instance that has an Internet IP address, a new Internet IP address will be assigned to the SLB instance.

B. SLB provides a function to automatically synchronize data among backend ECS instances using rsync remote synchronization.

C. One of SLB's features is the Health Check. If some of the backend ECS instances are down, whereas other backend ECS instances can still provide services, then the system can continue to work normally.

D. Before using SLB to provide external services, make sure that you have installed and correctly configured the SLB agent on all of the backend ECS instances.

Answer: (SHOW ANSWER)

NEW QUESTION: 24

When creating an ECS instance in your Alibaba Cloud VPC, you must specify a VSwitch for that instance at the same time. Otherwise, you will not be able to create this ECS instance.

A. False

B. True

Answer: B (LEAVE A REPLY)

NEW QUESTION: 25

Alibaba Cloud Content Delivery Network (CDN) performs content acceleration with the support of intelligent DNS resolution The following function_____is NOT included in intelligent DNS resolution.
A. If a user activates mirror sites in different IDCs, intelligent DNS resolution can achieve load balancing by guiding customers in different places to different mirror sites.
B. The intelligent DNS resolution can parse the same domain name into different IP addresses based on the IP of different visitors.
C. The intelligent DNS resolution supports web page content caching. A user will receive data from the origin site at first-time access, and then will be reading data from cache in subsequent requests
D. A user request is directed to the server nearest to the customer based on location information of the pre-configured IP section.
Answer: A (LEAVE A REPLY)

NEW QUESTION: 26
If you need to accelerate a certain domain name (such as abc.com) via Alibaba Cloud Content Delivery Network (CDN), you must add it to "CDN Domain Name List" in the CDN service. After added successfully, you will get a CNAME address A Next, you need to modify domain name resolution and direct the domain name (such as abc.com) to CNAME address A.
Which of the following is a NOT correct description of modifying domain name resolution?
A. The DNS service provider used by the domain name (such as abc.com) can be companies other than Alibaba Cloud.
B. The DNS service provider used by the domain name (such as abc.com) must support intelligent resolution.
C. If your domain name (such as abc.com) is transferred to Alibaba Cloud in advance, and managed by the same Alibaba Cloud account, you can perform one-step resolution modification.
D. The CNAME address allocated to the domain name (such as abc.com) will point to an IP address. This IP address resolving mechanism is intelligently managed by Alibaba Cloud CDN system.
Answer: (SHOW ANSWER)

NEW QUESTION: 27
Alibaba Cloud provides comprehensive security protection covering networks, hosts, applications, databases, and content for on-cloud clients. Users using Alibaba Cloud services only need to focus on their own services, without the need to pay any attention to security protection issues.
A. False
B. True
Answer: A (LEAVE A REPLY)
