NEW QUESTION: 1

Which JDBC exception in AEM Forms is thrown when a connection to the database server cannot be established or is lost because of configuration issues?

- A. JDBCDatabaseException
- B. JDBCConnectionException
- C. JDBCConfigurationException

Answer: B (LEAVE A REPLY)

This is a JDBC exception in AEM Forms that is thrown when a connection to the database server cannot be established or is lost because of configuration issues². It indicates that there is a problem with the connection URL, the credentials, the network, or the database server itself.

NEW QUESTION: 2

An AEM Forms developer wants to integrate AEM Forms with Adobe Sign to enable e-signature workflows for adaptive forms.

What is a required prerequisite the AEM Forms developer needs to have before configuring the integration?

- A. Client ID and Client Secret of Adobe Sign API application
- B. An AEM Forms server with disabled SSL
- C. Client ID and API Key of Adobe Sign API application

Answer: (SHOW ANSWER)

This is a required prerequisite that an AEM Forms developer needs to have before configuring the integration of AEM Forms with Adobe Sign. The Client ID and Client Secret are credentials that are used to authenticate the AEM Forms server with the Adobe Sign API. They can be obtained by creating an API application on the Adobe Sign web portal.

NEW QUESTION: 3

An AEM Forms developer is creating Adaptive Form fragments during the process of creating an AEM form.

- A.** Which best practice should the developer follow when completing this task?
- B.** Realize that an adaptive form fragment which is inserted by reference can be edited from within an adaptive form.
- C.** Understand that a Fragment Model Root appears only in XSD-based adaptive forms.
- D.** In an XSD-based adaptive form, save the panel as a fragment that includes another XSD fragment, so the resulting fragment will automatically be bound to the child XSD fragment.

Answer: C (LEAVE A REPLY)

This is a best practice that a form developer should follow when creating adaptive form fragments³. It helps to avoid manual binding of the fragment to the schema and ensures that the fragment inherits the properties of the parent schema.

NEW QUESTION: 4

Which console in the Navigation panel of AEM allows users to manage products, product catalogs, and orders related to a site?

- A.** Commerce
- B.** Assets
- C.** Communities

Answer: (SHOW ANSWER)

This is the console in the Navigation panel of AEM that allows users to manage products, product catalogs, and orders related to a site. The Commerce console provides features such as creating and editing product categories, importing product data from external sources, managing product variants and prices, and viewing order details and statistics.

NEW QUESTION: 5

An AEM Forms developer is working on AEM Forms workflow and needs to create an end-to-end procedure to create, run, and monitor a Forms-centric workflow on OSGi.

What are the correct steps to complete this task?

- A.** Create a workflow model > Launch a workflow > Audit or use a workflow
- B.** Launch a workflow > Create a workflow model > Audit or use a workflow
- C.** Create a workflow model > Audit or use a workflow > Launch a workflow

Answer: (SHOW ANSWER)

These are the correct steps to create, run, and monitor a Forms-centric workflow on OSGi¹. A workflow model defines the sequence of steps and actions that are executed when a workflow is launched. A workflow can be launched manually or automatically based on certain triggers. A workflow can be audited or used by accessing the AEM Inbox, which shows the tasks assigned to a user or a group.

NEW QUESTION: 6

An AEM Forms developer wants to use an API service to process files of a Watched Folder. The developer decides to use an API to return an immutable map of type Map that contains the configuration parameters of a Watched Folder.

Which API is the developer using?

- A. getWatchFolderId
- B. getConfigParameters
- C. getInputMap

Answer: B (LEAVE A REPLY)

This is an API service that can be used to process files of a Watched Folder. It returns an immutable map of type Map that contains the configuration parameters of a Watched Folder. The configuration parameters include input location, output location, failure location, and other custom parameters.

NEW QUESTION: 7

An AEM Forms developer wants to temporarily store attachments while working on the development of Adaptive Forms and decides to use a temporary location to create backend storage.

Which temporary location is the developer using?

- A. [AEM_Installation_Directory]\crx-quickstart\temp\datamanager\ASM folder
- B. [AEM_Transmission_Directory]\crx-quickstart\temp\datamanager\BIN folder
- C. [AEM_Recovery_Directory]\crx-quickstart\temp\datamanager\USI folder

Answer: A (LEAVE A REPLY)

This is the default temporary location for storing form attachments in AEM Forms1. The key is the adaptive form field and the value is the temporary location of the attachment. In a servlet, the attachment can be extracted and stored in a new location in the AEM repository and the FileMap can be updated with the new location.

NEW QUESTION: 8

An AEM Forms developer is creating a workflow model for review and approval and wants to introduce conditional processing paths in the workflow. The developer decides to split the workflow to meet this goal.

Which component is required to take this action?

- A. AND Split
- B. ECMA Split
- C. OR Split

Answer: B (LEAVE A REPLY)

This is a component that is required to introduce conditional processing paths in the workflow3. It allows the developer to define a condition using ECMA script that determines which path to follow based on the evaluation of the condition.

NEW QUESTION: 9

How does a XFA script behave in an XDP file, based on the XFA script event "validationState"?

- A. It is mapped to the Validation expression in adaptive form.
- B. The script is executed at runtime and cannot be overridden in adaptive form.
- C. It is mapped to the Allows multiple selection property in adaptive form.

Answer: A (LEAVE A REPLY)

This is how a XFA script behaves in an XDP file, based on the XFA script event "validationState"¹. The validationState event occurs when a field value changes and the field needs to be validated. The script in this event can be used to check the validity of the field value and set the validation message accordingly. In adaptive forms, this script is mapped to the Validation expression property of the field, which can be used to define a custom validation rule using JavaScript.

NEW QUESTION: 10

Which node type is used by an AEM Forms developer to create a custom logger using the CRXDE Lite tool?

- A. sling:OsgiConfig
- B. sling:UgmiControl
- C. sling:NewAccess

Answer: A (LEAVE A REPLY)

This is the node type that an AEM Forms developer needs to use to create a custom logger using the CRXDE Lite tool. The sling:OsgiConfig node type represents an OSGi configuration that can be used to configure various services and components in AEM. To create a custom logger, the developer needs to create a sling:OsgiConfig node under /apps/system/config with properties such as log.level, log.file, and log.pattern.

NEW QUESTION: 11

Which two key features are part of service packs in AEM Forms? (Choose two.)

- A. Multiple accessibility enhancements
- B. External repository (Maven 6.5)
- C. Ability to restore deleted pages and tree
- D. GraphQL API for Content Fragments

Answer: (SHOW ANSWER)

These are two key features that are part of service packs in AEM Forms¹. Multiple accessibility enhancements improve the user experience and compliance of adaptive forms and interactive communications with various accessibility standards. Ability to restore deleted pages and tree allows users to recover the pages and content trees that they have accidentally deleted.

NEW QUESTION: 12

Which user group can create and preview adaptive forms or interactive communications templates for AEM Forms on OSGi?

- A. template-authors
- B. fdm-authors
- C. forms-submission-reviewers

Answer: A ([LEAVE A REPLY](#))

This is the user group that can create and preview adaptive forms or interactive communications templates for AEM Forms on OSGi3. The template-authors group has permissions to access and use the template editor and preview features.

NEW QUESTION: 13

Which scheduler service gets invoked in watched folders endpoint to process the files or folders after a job scan interval completes?

- A. Watched Folder service
- B. provider.file.write.results.service
- C. provider.file.scan.service

Answer: ([SHOW ANSWER](#))

This is the scheduler service that gets invoked in watched folders endpoint to process the files or folders after a job scan interval completes³. The provider.file.scan.service scans the input folder for new files or folders and initiates the processing of them according to the watched folder configuration.

NEW QUESTION: 14

Which two out-of-the-box events are tracked in an analytics enabled AEM Adaptive Forms? (Choose two.)

- A. save
- B. abandon
- C. cancel
- D. reject

Answer: ([SHOW ANSWER](#))

These are two out-of-the-box events that are tracked in an analytics enabled AEM Adaptive Forms. The save event is tracked when a user saves a form as draft. The abandon event is tracked when a user closes a form without submitting it.

NEW QUESTION: 15

An AEM Forms developer wants to create an Interactive Communication.

What is a required action the AEM Forms developer needs to perform before it can be created?

- A. Setting up Tags
- B. Configure Watched Folder
- C. Setting up a Form Data Model

Answer: (SHOW ANSWER)

This is a required action that an AEM Forms developer needs to perform before creating an Interactive Communication2. A Form Data Model is a data source that provides data for prefilling and submitting an Interactive Communication. It can be based on a RESTful web service, a SOAP-based web service, a relational database, or an OData service.

NEW QUESTION: 16

Which URL pattern can be cached on a dispatcher used to configure Adaptive Forms?

- A. /content/dam/formsanddocument/[folder-name]/<form-name>/jcr:content
- B. /content/forms/[folder-structure]/[form-name).html
- C. /content/forms/[folder-structure]/[form-name)

Answer: B (LEAVE A REPLY)

This is the URL pattern that can be cached on a dispatcher used to configure Adaptive Forms. It represents the path of an adaptive form with an HTML extension. The dispatcher can cache this URL pattern and serve it from its cache instead of requesting it from the publisher every time.

NEW QUESTION: 17

An AEM Forms developer wants to assemble multiple PDF documents into a single PDF document using the Assembler service. The developer needs to invoke a certain method on the com.adobe.livecycle.assembler.client.AssemblerOptionSpec object to instruct the Assembler service to continue processing a job when an error occurs.

Which option shows the correct way of using the needed method to accomplish the goal?

- A. setFailOnError(true)
- B. setValidateOnly(false)
- C. setFailOnError(false)

Answer: C (LEAVE A REPLY)

This is the method that an AEM Forms developer needs to invoke on the com.adobe.livecycle.assembler.client.AssemblerOptionSpec object to instruct the Assembler service to continue processing a job when an error occurs. It sets the failOnError property to false, which means that the Assembler service will ignore any errors and try to complete the job as much as possible.

NEW QUESTION: 18

An AEM Forms developer is configuring Watched Folder properties for schedule of Asynchronous batch processes. By default, the waitTime property is configured as 3,600,000 milliseconds, and the file was created one minute earlier.

After how many minutes will the file be picked up from the scanned folder?

- A. After 29 minutes
- B. After 59 minutes
- C. After 79 minutes

Answer: (SHOW ANSWER)

This is the time after which the file will be picked up from the scanned folder. The waitTime property specifies the time interval in milliseconds between two consecutive scans of the input folder. The default value is 3,600,000 milliseconds, which is equivalent to 60 minutes. If the file was created one minute earlier, it will be picked up after 59 minutes.
