NEW QUESTION: 1

What needs to be created in BCSD to link multiple SRDF/A sessions?

- A. Composite Group
- B. Consistency Group
- C. Logical relationship
- D. MSC logical relationship

Answer: B (LEAVE A REPLY)

NEW QUESTION: 2

How do Copy mode linked targets and NoCopy mode linked targets behave when a SnapVX unlink operation disassociates the linked target?

A. Once the copy completes, Copy mode linked targets do not contain a full and usable copy of the source devices.

Behavior of NoCopy mode linked targets depends on the operating system running on the array. PowerMaxOS 5978 and HYPERMAX OS 5977.810.184 and later allow access to unlinked targets.

B. Once the copy completes, Copy mode linked targets will contain a full and usable copy of the source devices.NoCopy mode linked targets will not allow access to unlinked targets.

C. Once the copy completes, Copy mode linked targets contain a full and usable copy of the source devices.

Behavior of NoCopy mode linked targets depends on the operating system running on the array. PowerMaxOS 5978 and HYPERMAX OS 5977.596.583 and later allow access to unlinked targets.

D. Once the copy completes, Copy mode linked targets contain a full and usable copy of the source devices.

Behavior of NoCopy mode linked targets depends on the operating system running on the array. PowerMaxOS 5978 and HYPERMAX OS 5977.810.184 and later allow access to unlinked targets.

NEW QUESTION: 6

The SecurityAdmin for Unisphere wants to create a new user that will perform all management (active or control) operations on a storage system and be able to modify GNS group definitions in addition to all Monitor operations. The user will not be able to create or delete user accounts. What role needs to be assigned to the new user?

- A.** Device Management
- B.** Admin
- C.** SecurityAdmin

D. StorageAdmin

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 7

A storage architect is evaluating the performance of a PowerMax array during business hours. They want to know how much extra load the PowerMax can handle without significant performance degradation. The Workload Planner is used to identify the hot spots during the recurring backup windows.

Between 9:30 PM and 1:30 AM and between 3:15 AM and 5:30 AM, backups are causing the PowerMax to exceed the best practice recommendation. The Recurring System Data Exclusion Periods chart is used to filter out these hot spots. After running this workload planning for a few weeks, they notice that the selection of records they previously made are showing different numbers than when they started viewing the report, several weeks ago.

What is the explanation for this behavior?

- A. After two weeks the 84 data points are filled up and the report resets to default
- B. After two weeks the data of each time slot is refreshed with new data
- C. The average of the viewed window has dropped below the best practice
- D. After a week the data of each time slot is refreshed with new data

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 8

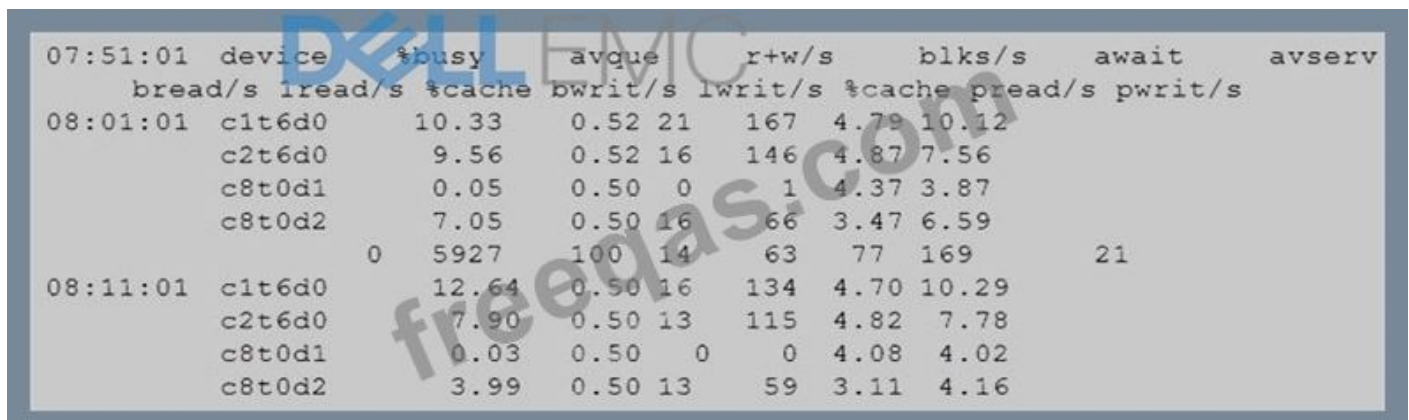

Which storage object must be created in Unisphere for PowerMax so that vCenter can automatically provision datastores to ESXi hosts?

- A. Storage Groups
- B. Host Groups
- C. Storage Volumes
- D. Masking View
