NEW QUESTION: 6

For the lobe width, which of the following descriptions is correct is (). (Select 3 Answers)

- A. The pattern usually has two or more lobes
- B. The narrower the lobe width, the better the directivity, the longer the radiation distance, the stronger the anti-interference ability
- C. Only within the coverage of the half power angle, the terminal can receive the signal
- D. Within the range of the main lobe, the power density relative to the maximum radiation direction is reduced by half (3dB) Angle

Answer: A,B,D ([LEAVE A REPLY](#))

NEW QUESTION: 7

For the polarization of electromagnetic waves, which of the following descriptions is correct is (). (Select 3 Answers)

- A. The polarization of the antenna refers to the direction of the magnetic field strength formed when the antenna radiates
, The direction of the electric field changes according to a certain rule
- B. If the electric field direction of the electric wave is perpendicular to the ground, we call it a vertically polarized wave
- C. The antenna radiates electromagnetic waves to the surrounding space
- D. If the transmitting antenna is circularly polarized, the receiving antenna must also be circularly polarized, and the polarization direction of the two must be the same.

Answer: B,C,D ([LEAVE A REPLY](#))

NEW QUESTION: 8

If connected to the same SSID Of wireless clients want to start from a AP Roam to another AP, Then two AP The area where the signal overlaps between. What is the general range ()?

- A. 100%
- B. 10%-15%
- C. No need to overlap
- D. 50%

Answer: B ([LEAVE A REPLY](#))
