NEW QUESTION: 1

Which of the following measures can help solve the problem of ping-pong switching in the same-frequency LTE cell? (Multiple Choice)

- A. Add Timetotriggger
- B. Add eventA3Offset
- C. Increase the filter factor
- D. Decrease Hysteresis

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 2

What are the indicators for switching to premature problem analysis? (Multiple choice)

- A. Switching out premature times between two specific cells
- B. The number of execution successes is switched by the same frequency in the eNodeB of the re-established returning source cell.
- C. The number of execution successes is switched by the same frequency between the eNodeBs of the re-established returning source cell.
- D. The inter-cell handover between the eNodeBs that are rebuilt back to the non-source cell is successful.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 3

Antenna feed adjustment refers to the adjustment of antenna azimuth and downtilt angle. The most commonly used method is to eliminate cross-area coverage, weak coverage, and PCI mode 3 conflicting cells.

- A. True
- B. False

Answer: ([**SHOW ANSWER**](#)**)**

NEW QUESTION: 4

Which of the following identifiers is used to temporarily identify a user in the EPC network?

- A. M-TMSI
- B. GUMMEI
- C. IMSI
- D. GUTI

Answer: D ([**LEAVE A REPLY**](#)**)**

NEW QUESTION: 5

The PDSCH carries DL-SC and PCH information.

- A. False
- B. True

Answer: B ([**LEAVE A REPLY**](#)**)**

NEW QUESTION: 6

Which control signaling can the uplink PUCCH send back? (Multiple Choice)

- A. PMI
- B. RI
- C. CQI
- D. QoS

Answer: ([**SHOW ANSWER**](#)**)**

NEW QUESTION: 7

When does FTP download start recording LOG?

- A. When you start downloading
- B. When the download is almost over
- C. No requirement
- D. When the download rate is stable

Answer: D ([**LEAVE A REPLY**](#)**)**

NEW QUESTION: 8

Regarding the re-election of the community, which of the following statements are correct? (Multiple choice)

- A. The serving cell and the inter-frequency system neighboring cell reselection priority are sent to the UE through the system message in the cell broadcast.
- B. The priority of the inter-frequency neighboring area must be different from the serving cell
- C. Same frequency neighbors have the same priority

D. The larger the neighboring cell offset value CellQoffset, the harder it is to reselect the cell.

Answer: A,C,D ([LEAVE A REPLY](#))

NEW QUESTION: 9

Regarding the re-election of the community, which of the following statements is wrong?

A. Same frequency neighbors have the same priority

B. The serving cell and the inter-frequency system neighboring cell reselection priority are sent to the UE through the system message in the cell broadcast.

C. The larger the neighboring cell offset value CellQoffset, the harder it is to reselect the cell.

D. The priority of the inter-frequency neighboring area must be different from the serving cell

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 10

In LTE system, what is the length of the wireless subframe?

A. 10ms

B. 0.5ms

C. 7ms

D. 1ms

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 11

Which of the following indicators does the calculation of the call rate of the data service depend on?

A. Paging success rate

B. Dedicated bearer establishment success rate

C. RRC connection establishment success rate

D. E-RAB assignment establishment success rate

Answer: A,C,D ([LEAVE A REPLY](#))

NEW QUESTION: 12

The period in which the UE sends the SRI to the eNodeB is called an SRI period, and the parameter can be configured to fix or adapt the SRI period.

A. True

B. False

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 13

Which of the following scenarios will release the NAS signaling connection after the TAU is completed?

- A. TAU initiated in the IDLE state, Active flag=0
- B. TAU initiated in IDLE state, Active flag=1
- C. TAU initiated under CONNECTED, Active flag=0
- D. TAU initiated under CONNECTED, Active flag=1

Answer: [\(SHOW ANSWER\)](#)

NEW QUESTION: 14

Unlike the 2/3G network, the concept of reselection priority is introduced in the LTE system. Which of the following is correct? (Multiple choice)

- A. In the LTE system, the network can configure the priorities of different frequency points or frequency groups and provide broadcasts to inform the UE in the system message that the corresponding parameter is CellReselectionPriority, and the value is (0....7).
- B. By configuring the priority of each frequency point, the network can more easily guide the terminal to re-elect to the high-priority cell to achieve balanced network load: improve resource utilization, ensure UE signal quality, etc.
- C. The priority configuration unit is the frequency point, so different cells in the same carrier frequency have the same priority.

Answer: A,B,C [\(LEAVE A REPLY\)](#)

NEW QUESTION: 15

If you use an extended CP, how many symbols are there every 1 millisecond, which of the following is correct?

- A. 14
- B. 12
- C. 6
- D. 7

Answer: D [\(LEAVE A REPLY\)](#)

NEW QUESTION: 16

Which of the MIMO system gains listed below are obtained using the relative independence of spatial channel fading? (Multiple choice)

- A. Diversity gain
- B. Array gain
- C. Interference suppression gain
- D. Spatial multiplexing gain

Answer: A,D [\(LEAVE A REPLY\)](#)

Valid H35-561-ENU Dumps shared by PrepPdf.com for Helping Passing H35-561-ENU Exam! PrepPdf.com now offer the **newest H35-561-ENU exam dumps**, the PrepPdf.com H35-561-ENU exam **questions have been updated** and **answers have been corrected** get the **newest** PrepPdf.com H35-561-ENU dumps with Test Engine here: <https://www.preppdf.com/Huawei/H35-561-ENU-prepaway-exam-dumps.html> (62 Q&As Dumps, **40%OFF** Special Discount: **Exam-Tests**)

NEW QUESTION: 17

What information does the UE regain after a successful service request?

- A. Reconstructed SGs
- B. Updated TAL
- C. Authentication code
- D. Rebuilt S1-C

Answer: (SHOW ANSWER)

NEW QUESTION: 18

The test found a rate, but the rate is much lower than the theoretical value, which is the reason for the impossible?

- A. PCIMod3 interference
- B. The user walks around
- C. Only uniflow in the downlink direction
- D. the order of antenna and RRU feeder is wrong

Answer: B (LEAVE A REPLY)

NEW QUESTION: 19

Which of the description of the drop rate indicator in the LTE drive test indicator is incorrect?

- A. Dropping means that when the mobile phone does not send Disconnect signaling or does not receive the Disconnect/Release signaling, the mobile phone returns to the idle state, and it is regarded as a dropped call.
- B. Drop refers to: Abnormal interruption of data transmission during normal data transmission of the terminal, including RRC connection abnormal interruption: or data rate is reduced to 0 for 5 seconds.
- C. Drop rate = number of dropped lines/successful completion of connection establishment
- D. The drop rate refers to the probability of a business interruption in the business process, that is, the ratio of the number of abnormal interruptions to the total number of business operations.

Answer: A (LEAVE A REPLY)

NEW QUESTION: 20

Which of the following modules does the AAU function module include? (Multiple Choice)

- A. CU
- B. RU
- C. Power Module
- D. AU

Answer: B,C,D ([LEAVE A REPLY](#))

NEW QUESTION: 21

Among the several randomly access preambles of LTE, which format is suitable for a wide coverage area with a radius of 80 km?

- A. Format 2
- B. Format 1
- C. Format 0
- D. Format 3

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 22

In the downlink middle layer mapping, the number of layers is less than or equal to the number of antenna ports.

- A. True
- B. False

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 23

How many subcarriers does PSS (Primary Synchronization Signal) occupy in the frequency domain?

- A. 10
- B. 6
- C. 108
- D. 72

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 24

Regarding blind handover, which of following description are in? (Multiple Choice)

- A. According to the A4 measurement report, the blind handover will select the highest RSRP cell for handover
- B. Blind handover can greatly improve the handover success rate
- C. Blind handover can be used regardless of co-frequency or inter-frequency handover
- D. In the coverage-based inter-frequency handover feature, eNodeB can support the delivery of blind handover event A2

Answer: A,B,C ([LEAVE A REPLY](#))

NEW QUESTION: 25

Which of the following radio bearers can carry NAS messages? (Multiple Choice)

- A. SRB1
- B. SRB0
- C. SRB2
- D. SRB3

Answer: [\(SHOW ANSWER\)](#)

NEW QUESTION: 26

Which network element does the UE-AMBR perform the speed limit?

- A. UE
- B. MME
- C. SGW
- D. ENODEB

Answer: D [\(LEAVE A REPLY\)](#)

NEW QUESTION: 27

Regarding random access, which of the following situations may be used for non-competitive random access?

- A. When the UE performs handover, the UE initiates random access in the target cell.
- B. When the UE is in the connected state, the uplink data arrives for some reason (the UE thinks that its uplink is out of step) and needs random access.
- C. Because the wireless link conditions are not good (failure), the RRC connection is reestablished, and the UE initiates random access.
- D. Initial RRC connection establishment, when the UE transits from the idle state to the connected state, the UE initiates random access.
- E. When the UE is in the connected state, the downlink data arrives for some reason (the ENB thinks that the UE is out of step) requires random access.

Answer: A,E [\(LEAVE A REPLY\)](#)

NEW QUESTION: 28

Assuming that the UE-ID is 515, the paging period is 256 frames, and Nb is 1T, which of the following frames may be the PF paging frame of the UE? (Multiple choice)

- A. 3
- B. 131
- C. 259
- D. 646
- E. 262

Answer: B,E [\(LEAVE A REPLY\)](#)

NEW QUESTION: 29

Which of the following descriptions are wrong? (Multiple choice)

- A. In order to support VOLTE in an LTE network, IMS and PCRF network elements need to be configured.
- B. EPS bearer is a LTE network QoS basic management unit, if necessary in LTE network to provide different QoS service, it is necessary to establish different EPS bearers
- C. In a network that supports LTE VoIP, if dual AP configuration is used, only one default EPS bearer will be established each time the power is registered.
- D. eSRVCC optimizes the near-end session update process, and the media switch point is changed to the called side network element, which shortens the switch duration.

Answer: C,D (LEAVE A REPLY)

NEW QUESTION: 30

At present, it is recommended to share the APN with voice and data, and the data adopts the default bearer. The signaling and media of VoLTE adopt a proprietary bearer and have higher QoS guarantee.

- A. True
- B. False

Answer: B (LEAVE A REPLY)

NEW QUESTION: 31

E-UTRAN to GERAN different system switching has five switching strategies: PS HO, CCO/NACC, SRVCC, redirection and fast redirection.

- A. Yes
- B. False

Answer: A (LEAVE A REPLY)

Valid H35-561-ENU Dumps shared by PrepPdf.com for Helping Passing H35-561-ENU Exam! PrepPdf.com now offer the **newest H35-561-ENU exam dumps**, the PrepPdf.com H35-561-ENU exam **questions have been updated** and **answers have been corrected** get the **newest** PrepPdf.com H35-561-ENU dumps with Test Engine here: <https://www.preppdf.com/Huawei/H35-561-ENU-prepaway-exam-dumps.html> (62 Q&As Dumps, **40%OFF** Special Discount: **Exam-Tests**)

NEW QUESTION: 32

In the LTE synchronization process, what signal is achieved by frame synchronization and time synchronization respectively?

- A. PSS
- B. SSS

- C. RS
- D. PBCH

Answer: A,B ([LEAVE A REPLY](#))

NEW QUESTION: 33

Which of the following carries PUSCH scheduling information?

- A. DCI format 0
- B. DCI format 1B
- C. DCI format 1
- D. DCI format 1A

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 34

The air interface paging message includes a field (CS or PS) indicating the source of the paging, an E flag, and a location-dependent TA.

- A. True
- B. False

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 35

The resource block of the PUCCH channel is in the middle of the uplink frequency band.

- A. True
- B. False

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 36

The PUCCH channel can carry uplink control information, and the PUSCH channel can carry uplink data. A user can use these two channels at the same time.

- A. wrong
- B. True

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 37

Which of the following descriptions is correct?

- A. The attach type initiated by the VoLTE user is EPS-attach, and the attach type initiated by the CSFB user is combined attach.
- B. If the user's default APN is signed as the IMS APN in the HSS, the data APN is non-default, which will cause the user to activate the first default bearer with IMSIPN in all scenarios.
- C. There are default bearers and dedicated bearers in LTE. Voices for VoIP must use dedicated bearers.

D. In the Attach request, the UE will report the LTE voice capability (whether CSFB or VoIP is supported) to the MME.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 38

What are the deployment methods of NB-IoT?

- A.** Protection belt deployment
- B.** In-band deployment
- C.** TDD system deployment
- D.** Independent deployment

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 39

What are the effects of improper adjustment of the mechanical downturn of the antenna?
(Multiple Choice)

- A.** Excessive mechanical downtilt angle will cause the antenna to filter back and back, which will damage the antenna for a long time.
- B.** Excessive mechanical downtilt angle can also cause beam distortion to generate new interference
- C.** The mechanical downturn will cause the back flap of the antenna to be upturned, causing interference to the neighboring area, causing the mobile phone of the lower layer of the neighboring area to drop the call.
- D.** The mechanical downturn will cause the back flap of the antenna to be upturned, causing interference to the neighboring area, causing the mobile phone of the higher layer of the neighboring area to drop the call.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 40

Which protocol layer does the eNodeB side handle on the S1 interface control plane data?

- A.** RRC
- B.** S1AP/SCTP
- C.** GTPU/UDP
- D.** SCTP/IP

Answer: **B** ([LEAVE A REPLY](#))

NEW QUESTION: 41

In LTE system, how many codewords can a TTI pass up to?

- A.** 4
- B.** 1
- C.** 2
- D.** 3

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 42

Which of the following services of the M2000 server resolves the packets reported by the NE to a unified structure, and the performance service stores the data required by the user into the performance database?

- A. Adaptation
- B. Application
- C. Physics
- D. IP

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 43

Which of the following are methods that can be used to solve a weak coverage problem? (Multiple choice)

- A. Reduce the signal strength of the non-primary coverage cell and improve the SINR of the primary coverage cell signal
- B. Adjust the weight of the sector beam of the primary coverage cell to make the energy more concentrated
- C. If the power of the primary coverage cell does not reach the rated maximum, the power of the primary coverage cell is appropriately increased.
- D. Adjust the antenna tilt and azimuth of the main coverage area

Answer: A,C,D ([LEAVE A REPLY](#))

NEW QUESTION: 44

Which process does the UE need to initiate if the network capability (security capability) of the UE changes?

- A. Random-access
- B. Paging
- C. Detach
- D. TAU

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 45

For LTE system messages, which of the following statements are correct? (multiple choice)

- A. SIB1 and all SI messages are transmitted on BCCH → DL-SCH → PDSCH.
- B. The transmission of SIB1 is completed through PDCCH scheduling carrying SI-RNTI (SI-RNTI is the same for each cell).
- C. Except for SIB1, SIB2-SIB13 are all carried by SI (System Information), and SIB2 must be mapped in the first SI message.

D. The Scheduling InfoList in SIB2 carries the scheduling information of all SIs. After receiving SIB2, other SI messages can be received.

Answer: A,B,C (LEAVE A REPLY)

NEW QUESTION: 46

Which sub-functions are the RF subsystem functions included in the following? (Multiple Choice)

- A. Provide interface of base station and antenna system
- B. Provide interface of base station and the external clock source
- C. Complete uplink and downlink baseband data processing functions
- D. Complete the send and receive processing functions of the wireless signal

Answer: (SHOW ANSWER)

Valid H35-561-ENU Dumps shared by PrepPdf.com for Helping Passing H35-561-ENU Exam! PrepPdf.com now offer the **newest H35-561-ENU exam dumps**, the PrepPdf.com H35-561-ENU exam **questions have been updated** and **answers have been corrected** get the **newest** PrepPdf.com H35-561-ENU dumps with Test Engine here: <https://www.preppdf.com/Huawei/H35-561-ENU-prepaway-exam-dumps.html> (62 Q&As Dumps, **40%OFF** Special Discount: **Exam-Tests**)

NEW QUESTION: 47

In the RRC Connection Reestablishment Request message, what are the reasons for re-establishment? (Multiple choice)

- A. Other failures
- B. Load balancing TAU requirements
- C. Switching failed
- D. Reconfiguration failed

Answer: A,C,D (LEAVE A REPLY)

NEW QUESTION: 48

Which descriptions are correct about the 0.5TTI characteristics? (Multiple Choice)

- A. Improve end-to-end transmission delay
- B. Increase the number of residential users
- C. Improve the business capacity of small packages
- D. Shorten the port delay

Answer: (SHOW ANSWER)

NEW QUESTION: 49

Which of the following parameters is modified to affect the capacity of the cell PRACH channel?

- A. Preamble format
- B. ZC root sequence cyclic shift (Ncs)
- C. PRACH configuration index
- D. Root sequence index

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 50

Which system carries the cell reselection control parameters of the 2G network in the LTE system?

- A. SIB6
- B. SIB8
- C. SIB7
- D. SIB5

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 51

Regarding the switching indicator statistics, which of the following descriptions is wrong?

- A. Switching into the indicator statistics point on the target side
- B. Different system switching between TDD and FDD cells
- C. The UE reconstruction success of the handover failure is successful.
- D. Switching out the indicator statistics point in the source cell

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 52

Which of the following are the steps of the Layer 1 random access process? (Multiple Choice)

- A. Using the selected preamble sequence, using the transmit power for a preamble transmission on the indicated PRACH resource
- B. The upper layer requests the preamble to trigger the physical layer process.
- C. The base station determines the power of each RE in the downlink
- D. Select the leading sequence in the set of preamble sequences using the leading sequence number

Answer: A,B,D ([LEAVE A REPLY](#))

NEW QUESTION: 53

In the LTE system, the radio interface includes layer 1, layer 2, and layer 3, wherein layer 1 is a physical layer; layer 2 includes MAC layer, an RLC layer, and PDCP layer, wherein the MAC layer performs ARQ functions.

- A. True

B. False

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 54

The transmission of ACK/NACK and CQI will continue for one subframe, and if the coverage requirement cannot be reached, the transmission may be repeated in consecutive subframes.

A. True

B. False

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 55

What are the raster map formats supported by Assistant? (multiple choice)

A. .gst

B. .gif

C. .jpg

D. .bmp

Answer: B,C,D ([LEAVE A REPLY](#))

NEW QUESTION: 56

A cell has 2 channels and 2 antenna ports, and the RS power on the single antenna port is 15.2dBm. After the total power is kept unchanged, the 8 channels and 2 antenna ports are configured. How much power is the single channel?

A. 9.2dBm

B. 6.2dBm

C. 7.2dBm

D. 8.2dBm

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 57

Regarding indoor distribution antennas and components, which of the following statement is wrong?

A. Power splitter: Split one signal into two or more channels (three-way, four-way) output

B. Try to use "high power, less antenna" for indoor antenna layout

C. The leaky cable can be regarded as a kind of slot antenna, suitable for coverage in tunnels, subways, etc.

D. Attenuator: consuming the excessive energy of RF signal, mainly used to reduce signal level and avoid the influence of overflow

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 58

Which of the following is not included in the survey station preparation information?

- A. Existing network conditions
- B. Engineering Parameter Table
- C. Background information
- D. Project documents
- E. The latest network planning base station survey table

Answer: E ([LEAVE A REPLY](#))

NEW QUESTION: 59

Which is the eNodeB of MAC between sub-layer SAP?

- A. Radio bearer
- B. Transmission channel
- C. Physical channel
- D. Logical channel

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 60

Probe is an air interface test tool, mainly used to collect LTE network air interface test data.

- A. False
- B. True

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 61

Which protocol provides a framework for authentication, authorization, and accounting (AAA) for the IMS network?

- A. DIAMETER
- B. SIP
- C. H.248
- D. SDP

Answer: B ([LEAVE A REPLY](#))
