- B. tier recommendation
- C. VM node inventory
- D. capacity usage

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 11

A customer is looking to improve their AI and Analytics ability by creating a search bar with more advanced search pane to help users quickly find subsets of records. They need to control who has access to which records and need a solution that provides role-based access control.

Which solution from IBM can address the customer's needs?

- A. IBM Spectrum Protect Plus

- B. IBM Spectrum Control
- C. IBM Spectrum Discover
- D. IBM Spectrum Scale

Answer: C ([LEAVE A REPLY](#))

Explanation

IBM Spectrum Discover provides both a search bar and a more advanced search pane to help users quickly find subsets of records that are indexed. Search results are displayed in a columnar table that contains information that is correlated to search criteria. What a user can see or not see is determined by using role-based access control (RBAC). All these features enable a strong decision-making capability around the management of the data by using the metadata about the data or data from the content files in a simple searchable format.
