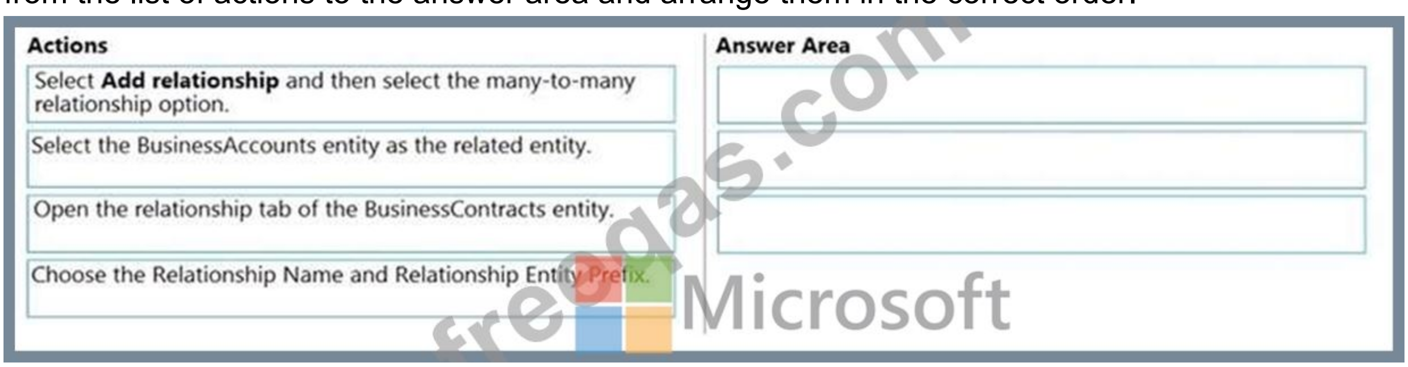
NEW QUESTION: 1

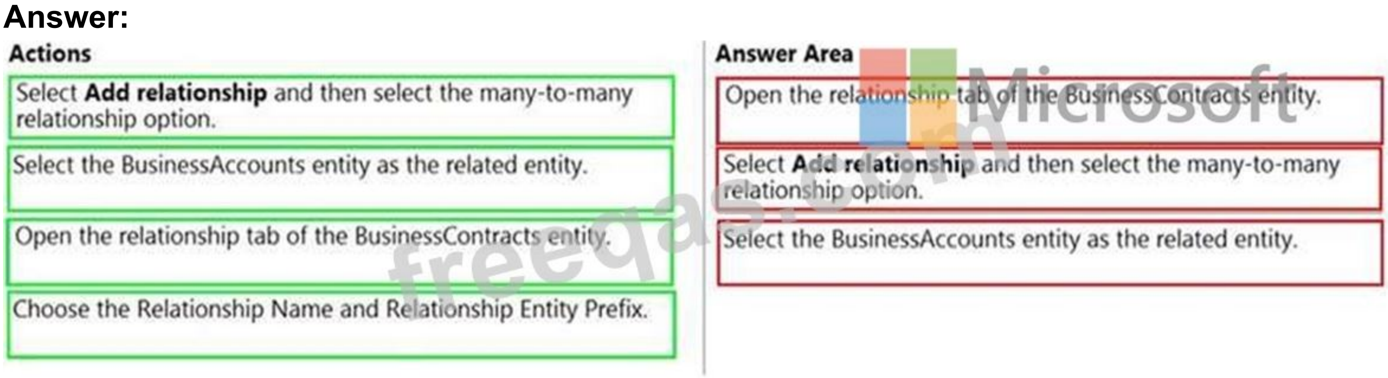
You have the following Common Data Service entities: BusinessContracts and BusinessAccounts.

You need to configure an N:N relationship between the two entities.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.



Answer:



Explanation:

Step 1: Open the relationship tab of the BusinessContracts entity.

View entity relationships

From the Power Apps portal, select either Model-driven or Canvas design mode.

Select Data > Entities and select the entity that has the relationships you want to view.

With the Relationships tab selected, you can select the following views:

Step 2: Select Add relationship..
Create relationships
While viewing entity relationships, in the command bar, select Add relationship and choose Many-to-many.
Step 3: Select the BusinessAccounts entity as the related entity.
Reference:
https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/create-edit-nn-relationships-portal

NEW QUESTION: 2
You have a Power Platform solution that uses Common Data Service.
You need to secure all fields that support field-level security.
Which field can you secure?
A. createdon
B. accountid
C. owninguser
D. description
Answer: D (LEAVE A REPLY)
Which fields can be secured?
Although most attributes can be secured, there are system attributes, such as IDs, timestamps, and record tracking attributes, that can't. Below are a few examples of attributes that can't be enabled for field security.
ownerid, processid, stageid, accountid, contactid
createdby, modifiedby, OwningTeam, OwningUser
createdon, EntityImage_Timestamp, modifiedon, OnHoldTime, overriddencreatedon statecode, statuscode Reference:
https://docs.microsoft.com/en-us/power-platform/admin/field-level-security

NEW QUESTION: 3
A company is onboarding new workers to the Microsoft Power Platform.
A user reports an access issue with a Power Apps app. The user provides no additional information about the access issue.
You need to troubleshoot the app and data security configurations for the user.
Which tool should you use?
A. Azure AD Security review
B. User information page
C. Accessibility checker
D. Run diagnostics
Answer: D (LEAVE A REPLY)
User access diagnostic tool in the Power Platform admin center:

Several factors influence user access in a Microsoft Dataverse environment. To help administrators with diagnosing user access to an environment and reasons for access or no access, the new "Run diagnostics" feature in the Power Platform admin center provides basic access diagnostics for individual users in the environment. The feature helps to detect potential causes to user sign-in and other issues and suggests potential mitigations.
Reference:
https://docs.microsoft.com/en-us/power-platform/admin/troubleshooting-user-needs-read-write-access-organization
Topic 1, Contoso, Ltd
Current environment
Overview
Operations for the company are managed very informally. Only a small number of long-term employees are aware of all manufacturing processes.
Accounting system and purchasing
The company has a cloud-based ERP/accounting system and uses the General Ledger, Accounts Receivable, and Accounts Payable modules. The current system does not have any modules that handle shop floor or manufacturing planning functionality.
Employee information is maintained only within the accounting system. Access to the information is strictly controlled due to privacy regulations and company policies.
All purchasing of raw materials is performed based on bills of material (BOMs) generated by the engineering department when engineering prints are created.
The corporate office uses Dynamics 365 Finance. The operations manager reports that Dynamics 365 Finance will not be implemented for the manufacturing plants for at least five years.
Manufacturing and planning
The plant that Contoso, Ltd. acquires uses Microsoft Excel workbooks and Microsoft Word documents to track the sales pipeline, requests for quote responses, and work estimates. The documents are stored on shared network drives.
Printed engineering drawings are sometimes accidently used across orders. This results in rework, cost over runs, and missed deliveries.
The company uses Job Traveler documents to detail the operations that need to be performed and the materials needed for a given job number.
Sales
Requests for quotes are currently stored in a Sales Log workbook. The workbook includes the following information:
Customer request number
Customer name
Description
Estimated value of the sale
Status of the Request for Quote (RFQ) with the values of Won, Lost, No Bid, and Cancelled
Names of the sales manager, salesperson, and estimator Name of the product line Date the quote was sent to the customer Approximate start and finish dates of the project Date the order

was received, if won Job number, which is assigned if won The company has a formal process in place for managing estimates. Some sales quotes lack required supporting documentation including estimates for labor and materials even though a formal process is in place. The company wants to incorporate the formal process as part of an app.
Salespeople often do not set status of RFQs in the Sales Log to Won when a sale is closed and the customer purchase order is received.
An accurate sales pipeline and win/loss information cannot currently be reported because the close probability field in the Sales Log is being set to 100% when a sale is closed and 0% when a sale is lost.
Setting up a folder system on the network drive by a customer had not improved the hand-off of the current version of the sales quote to manufacturing.
Requirements
Solution
You plan to create a solution that uses Microsoft Teams and Power Platform.
You must convert the Sales Log workbook to a Common Data Service database.
Each department will have a separate Teams channel. Employees must only be able to access the channel for their department. All employees and management will have read access to a general company channel. The Teams site must include the following channels:
Sales
The Sales dashboard must reside in the Sales channel and must include information about active quotes, sales pipeline, and year-to-date sales KPIs for sales quotas by region.
All Sales-related documents must be stored in folders in the files location for this channel.
Document versioning will be enabled. You must store the 10 most recent versions of a document.
Manufacturing
A dashboard that shows a capacity Heat map by month as well as expected sales that are likely to close for the next month.
A sortable listing of all in-process jobs from the Job Setup table, by customer, start date, and product.
Printed paper drawings must no longer be used. The drawings must be stored in folders in the files location for the manufacturing channel.
General
You must create the following apps:
Time Tracking
You must create a canvas app to track time for each employee on mobile devices. The app must include the following:
a Sign-in screen
a screen to list the week's time entries for the employee
a screen to edit current time entries for the employee
The app must meet the following requirements:
The app must store its data in the existing on-premises Microsoft SQL Server instance.
Employees must only be able to access their own time tracking records from the app.

Employees must record all time spent in the fabrication of each customer job.
Employees must only be able to modify time records for the current and previous day.
Employees must be able to scan their badges to check in and out of work. Each badge contains the employee name and a current picture.
A QR code must be added to all employee badges. The code must include the employee's number.
Job Traveler documents must be printed as PDF documents and must include UPC E barcodes for the job number and task number. The barcodes will be used with the time tracking application.
Sales
The Sales app must meet the following requirements:
Provide a central location for all sales pipeline and quote information that is easily accessible and maintains all of the versions of the estimate, quote, and engineering documents.
Include a dashboard that shows all currently active quotes, their status in the sales cycle, the probability of closing, and estimated manufacturing and installation dates, by customer, product division, status, and salesperson.
The Sales Log app must enforce process standards related to the completion of estimates and supporting materials needed during the sales lifecycle.
Automatically perform the following actions immediately when a sale is won:
Generate a sequential job number.
Copy key sales information to the Job Setup entity used by manufacturing.
If the sale is lost, the Status field must be set to Lost and the reason for the loss must be entered into a provided text field. The reason must be added to the end of the description field.
Ensure that employees can easily update the Sales Log even if they are at a customer site.
Manufacturing and planning
The app must meet the following requirements:
Provides features to plan and predict capacity resource requirements for current and upcoming orders in the pipeline.
Replace paper timesheets and track check-in, check-out, breaks, and the time spent on each job task.
Record time elapsed while performing work and for viewing of engineering drawings.
The Job Setup entity must store its data in the existing on-premises SQL Server instance.
Job Traveler documents must be generated as a PDF document and printed from the Job Setup entity.
Issues
Uses report that the customer request number is difficult to interpret. They request that you change the number to a system generated sequential number.
The operations manager reports that users often incorrectly sign in to the time tracking app. The operations manager asks that the time tracking app display the employee's photo once they have scanned their badge.
Users want to be able to see their weekly total time entered from all screens.

Testers report that they can see time entries in the Time Tracker app, not just their own. Additionally, they can also edit any existing time entries.

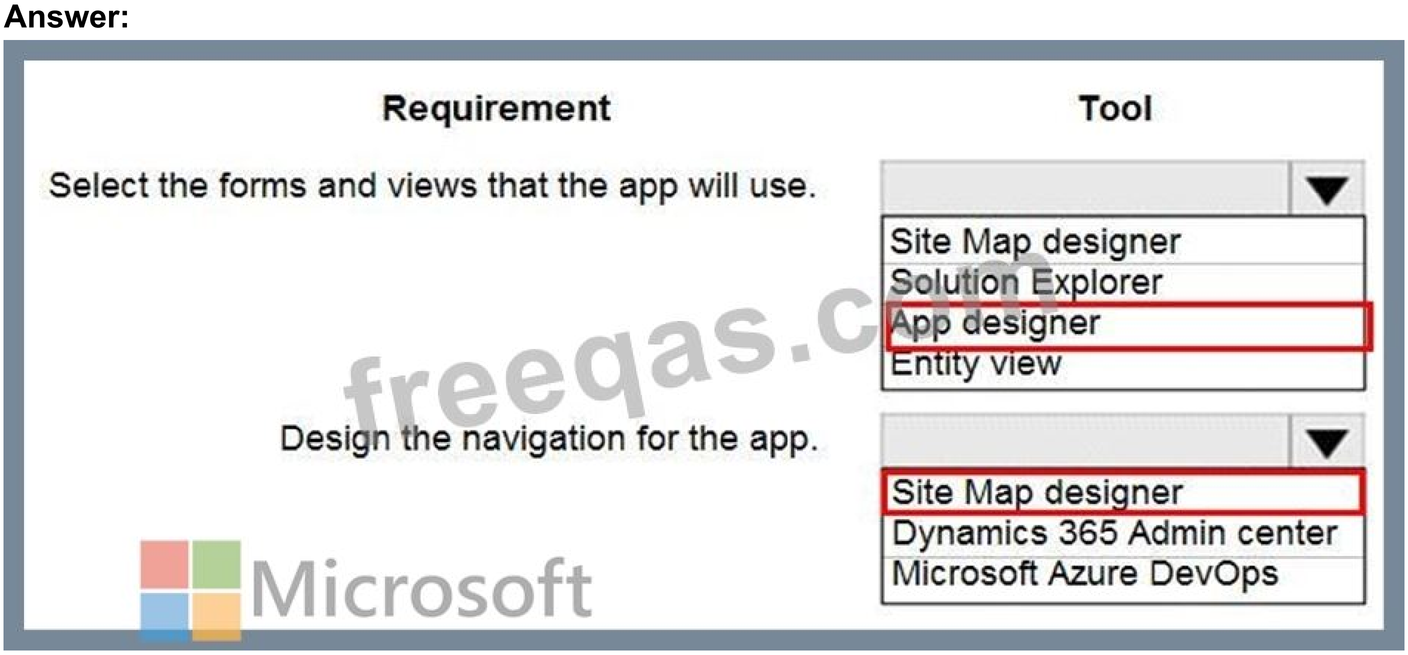
NEW QUESTION: 4

You need to create a model-driven app without using code.

Which tools should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:



Reference:

https://docs.microsoft.com/en-us/powerapps/maker/model-driven-apps/create-edit-views-app-designer

https://docs.microsoft.com/en-us/powerapps/maker/model-driven-apps/create-site-map-app

NEW QUESTION: 5

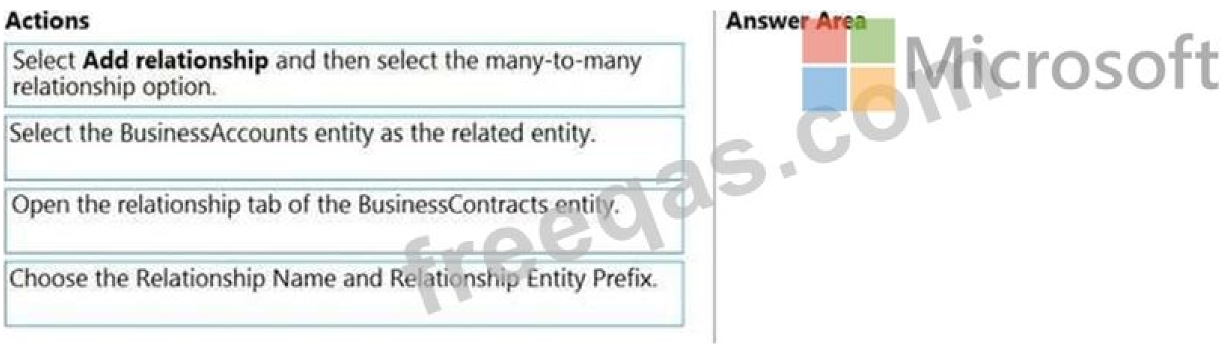
You need to modify the entity form to resolve the customer request number issue.

What should you do?
A. Use a calculated field
B. Change the data type of the customer request number field to Lookup
C. Change the data type of the customer request number field to Autonumber
Answer: C (LEAVE A REPLY)
Scenario: Users report that the customer request number is difficult to interpret. They request that you change the number to a system generated sequential number.
Autonumber columns are columns that automatically generate alphanumeric strings whenever they are created.
Reference:
https://docs.microsoft.com/en-us/powerapps/maker/data-platform/autonumber-fields

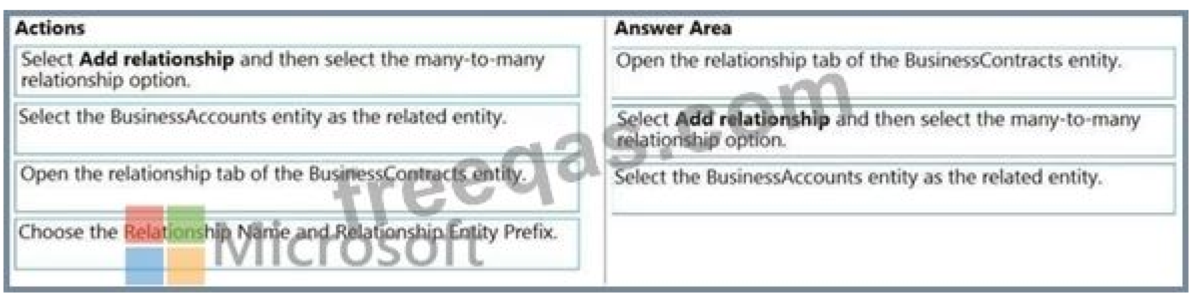
NEW QUESTION: 6
You are creating an app for a company.
You need to evaluate the default solution.
Which two behaviors should you expect from the default solution? Each correct answer presents a complete solution.
NOTE: Each correct selection is worth one point.
A. You can change the prefix of the publisher of the default solution
B. If you create a Power Automate flow in a solution, the flow uses the prefix defined in the publisher
C. If you create an environment variable in a solution, the variable uses the prefix defined in the publisher
D. You can change the version number of the default solution
Answer: B,D (LEAVE A REPLY)
The default solution in Power Apps is the Common Data Service Default Solution, which is associated with the Microsoft Dataverse Default Publisher. The default publisher prefix will be randomly assigned for this publisher, for example it might be cr8a3. This means that the name of every new item of metadata created in the default solution will have this prepended to the names used to uniquely identify the items. If you create a new entity named Animal, the unique name used by Dataverse will be cr8a3_animal. The same is true for any new fields (attributes), relationships, or option-set options. If you'll be customizing this special solution, consider changing the publisher prefix.
Incorrect Answers:
A: You can only change the prefix of unmanaged solutions.
Reference:
https://docs.microsoft.com/en-us/power-platform/alm/use-solutions-for-your-customizations
https://docs.microsoft.com/en-us/powerapps/maker/data-platform/create-solution

NEW QUESTION: 7
DRAG DROP

You have the following Common Data Service entities: BusinessContracts and BusinessAccounts.
You need to configure an N:N relationship between the two entities.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.
Select and Place:

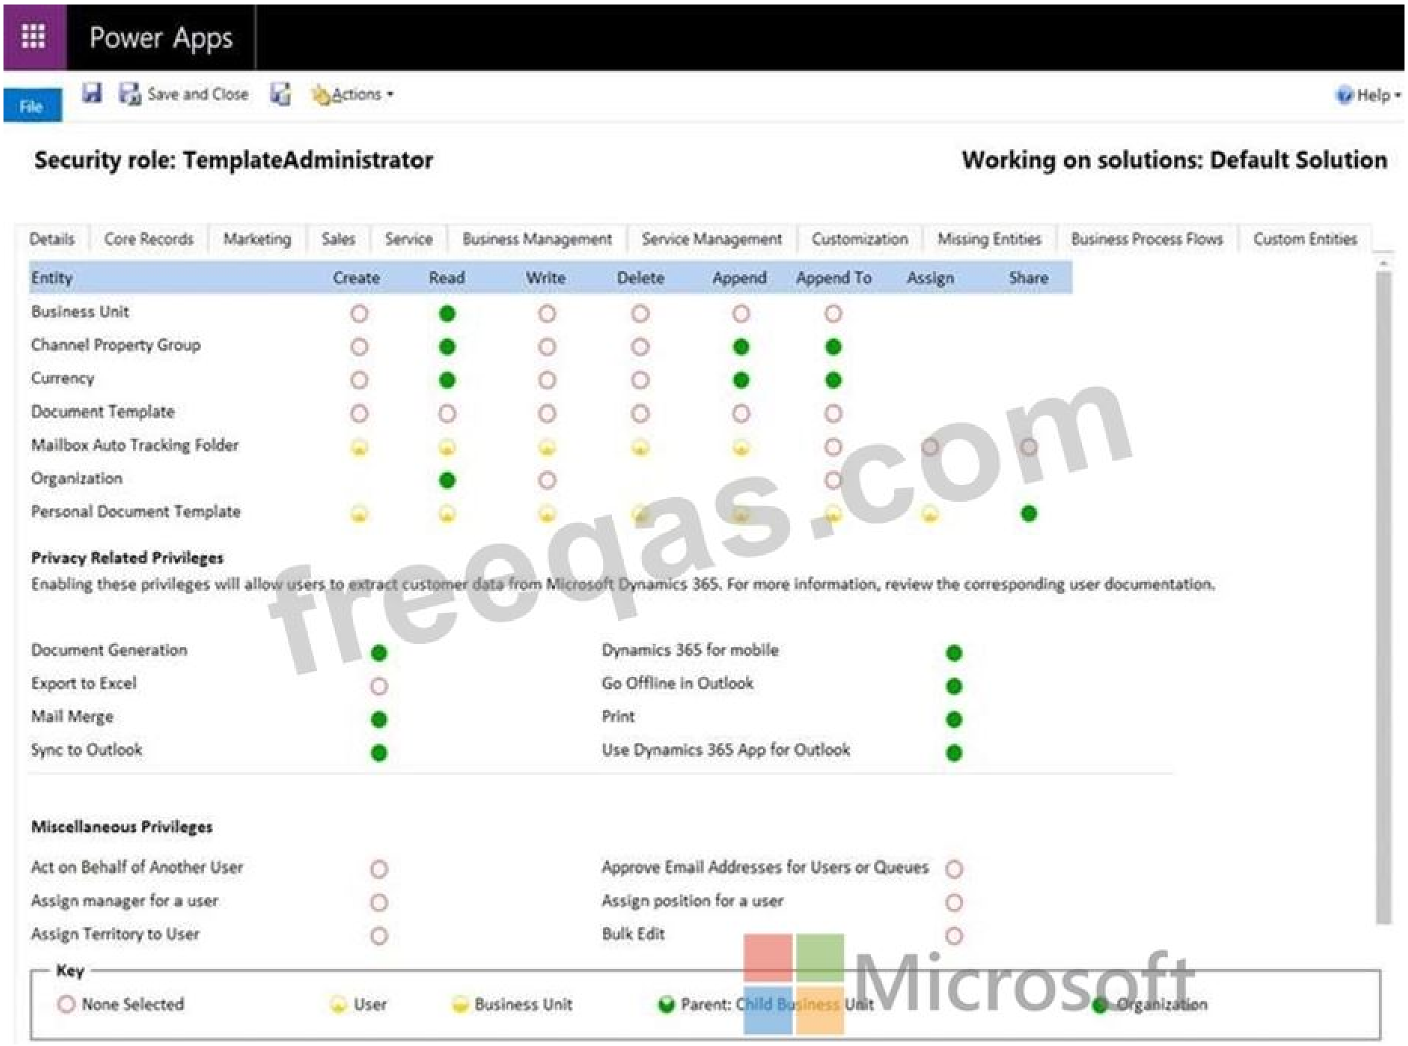


Answer:



Explanation:
Step 1: Open the relationship tab of the BusinessContracts entity.
View entity relationships
From the Power Apps portal, select either Model-driven or Canvas design mode.
Select Data > Entities and select the entity that has the relationships you want to view.
With the Relationships tab selected, you can select the following views:
Step 2: Select Add relationship..
Create relationships
While viewing entity relationships, in the command bar, select Add relationship and choose Many-to-many.
Step 3: Select the BusinessAccounts entity as the related entity.
Reference:
https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/create-edit-nn-relationships-portal

NEW QUESTION: 8
You are configuring security to enable users to analyze data by using Microsoft Excel templates. You create a security role named TemplateAdministrator and configure the role as shown below and assign the role to a user named User1.



Use the drop-down menus to select the answer choice that answers each question based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

You need to ensure that User1 can see the pre-configured example templates.
Which permission should you change?

- Bulk Edit
- Export to Excel
- Read on Document Template
- Read on Personal Document Template

You need to ensure that User1 can download the file to create an Excel template
Which permission should you change?

- Bulk Edit
- Export to Excel
- Read on Document Template
- Read on Personal Document Template

Answer:

You need to ensure that User1 can see the pre-configured example templates.
Which permission should you change?

- Bulk Edit
- Export to Excel
- Read on Document Template
- Read on Personal Document Template

You need to ensure that User1 can download the file to create an Excel template.
Which permission should you change?

- Bulk Edit
- Export to Excel
- Read on Document Template
- Read on Personal Document Template

NEW QUESTION: 9

You create a model-driven app for a company. The app will be used to manage events that the company organizes.

The Events entity ownership type is set to User or team. Members of the marketing team are assigned the MarketingTeam security role. All privileges for the role are set to User access.

All employees must be able to view event records. Only members of the marketing team are permitted to create or edit event records. You create a role named OtherEmployees.
You need to configure the MarketingTeam and OtherEmployees security roles.
Which three actions should you perform? Each correct selection presents a part of the solution.
NOTE: Each correct selection is worth one point.

A. Set the access level for the MarketingTeam security role to None Selected for the Create and White permission.

B. Set the access level for the OtherEmployees security role to None Selected for the Create and Write permission.

C. Set the access level for the MarketingTeam security role to None Selected for the Read permission.

D. Set the access level for the OtherEmployees security role to None Selected for the Read permission.

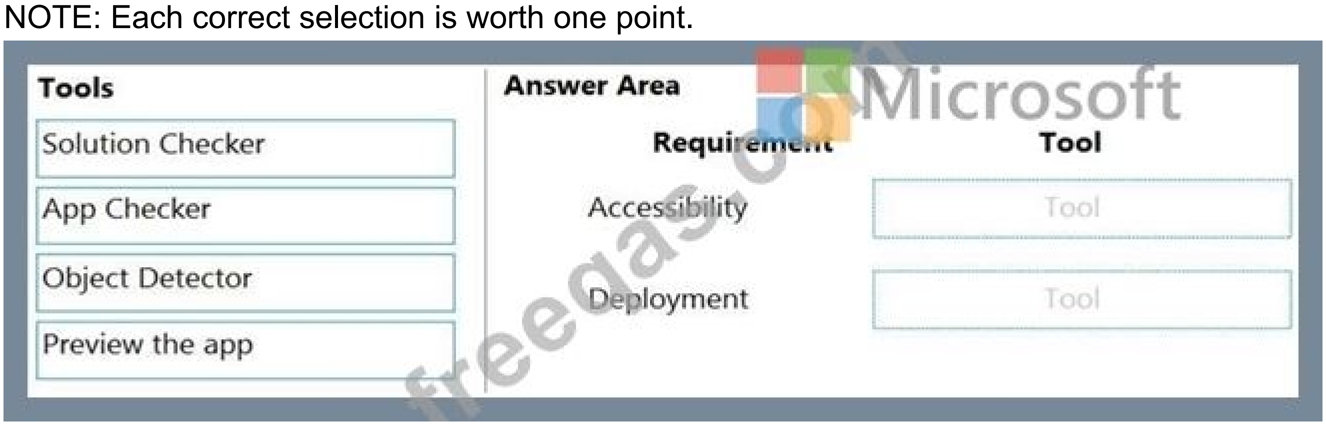
E. Set the access level for the OtherEmployees security role to Organization for the Read permission.

F. Set the access level for the MarketingTeam security role to Organization for the Read permission.

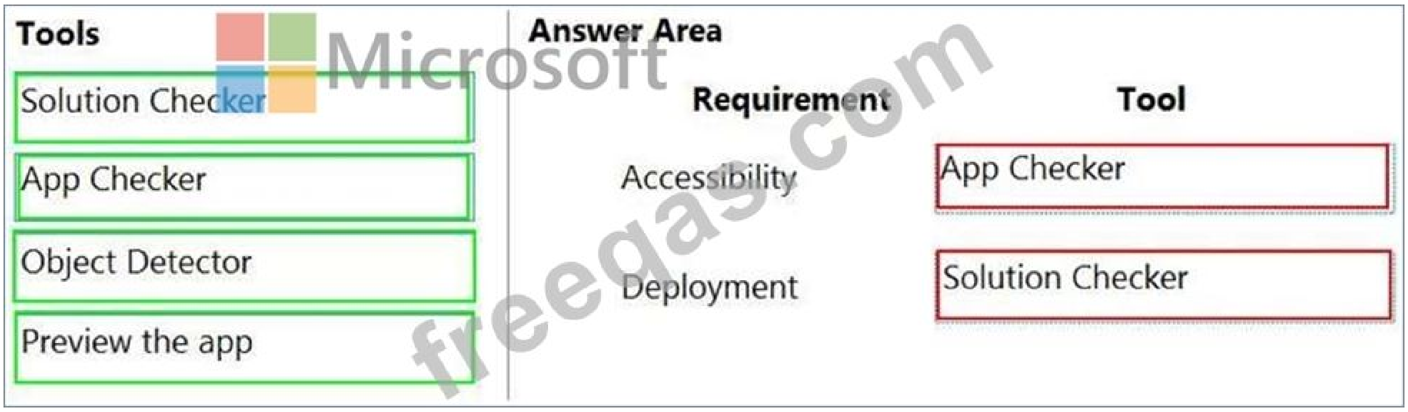
Answer: A,E,F (LEAVE A REPLY)

NEW QUESTION: 10

You need to ensure that the app can support the needs of User2 and User3, and meets the production deployment requirements.
Which tools should you use? To answer, select the appropriate tool in the answer area.
NOTE: Each correct selection is worth one point.



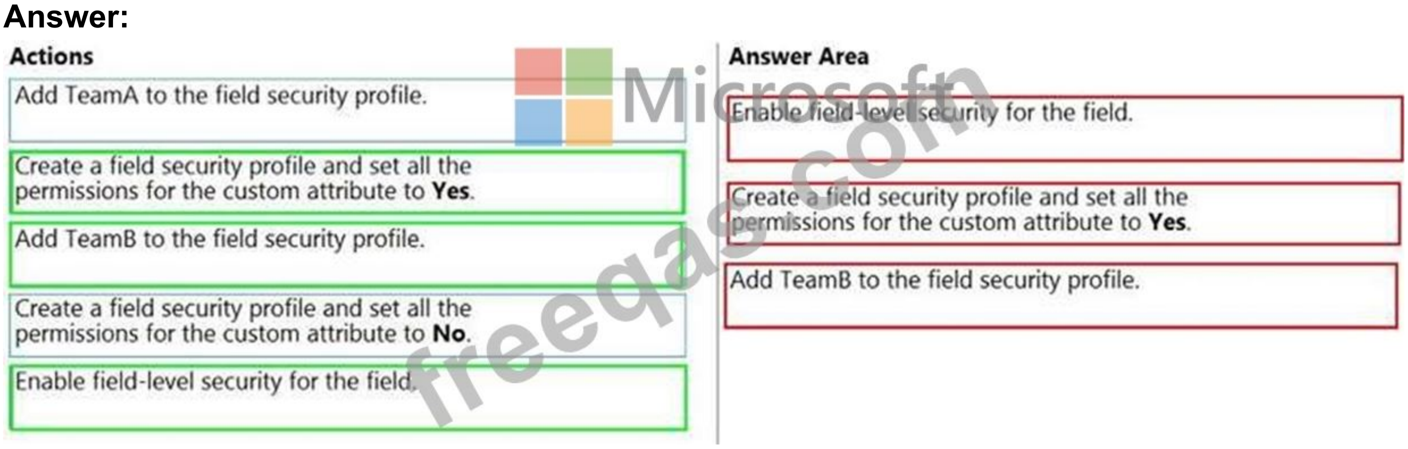
Answer:



Reference:
https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/accessibility-checker
https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/use-powerapps-checker

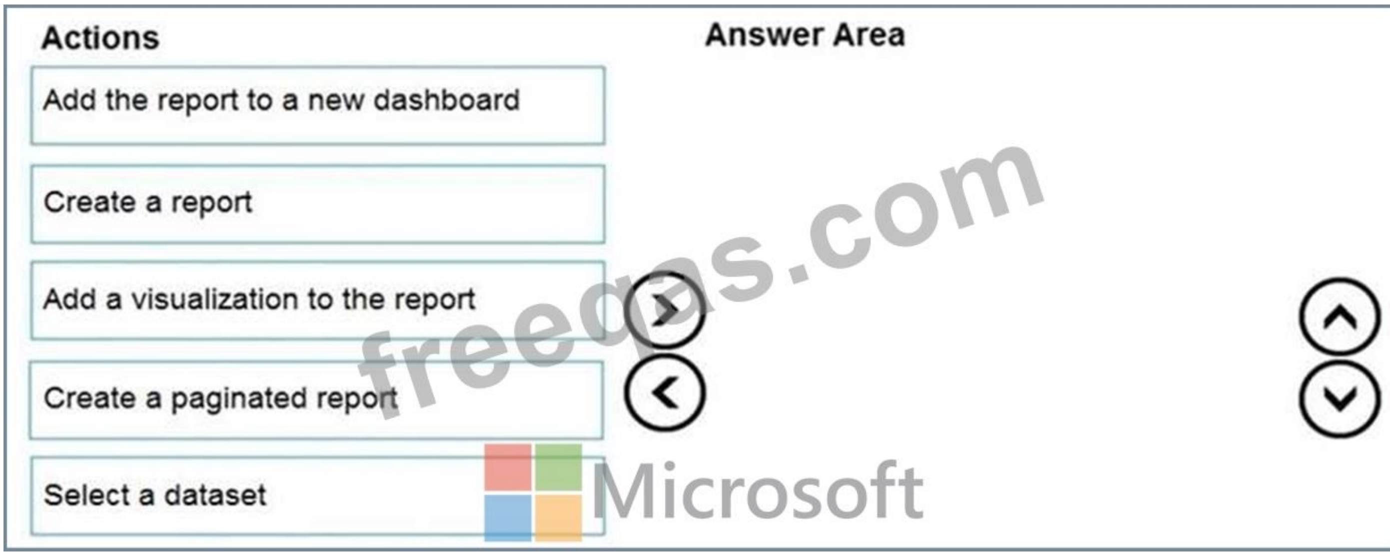
NEW QUESTION: 11
You create a custom field on the Account entity.
Members of TeamA must have full access to the field. Members of TeamB must have no access to the field.
You need to configure security.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

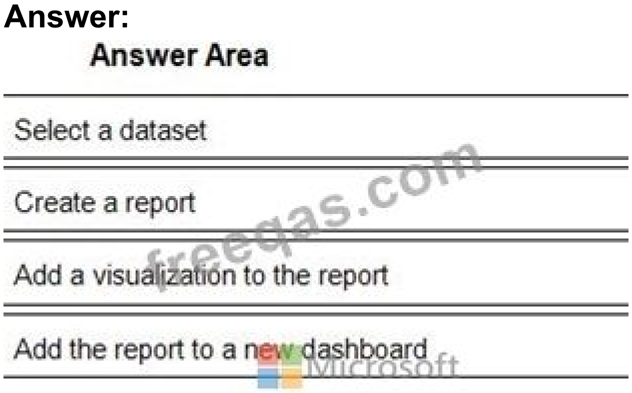


NEW QUESTION: 12
You are developing a Power BI report for a company.

The Power BI report must display company performance metrics in Power BI service. The report must include three fields in a visualization. The data for the report exists in a dataset.
The company will display the report on a large television screen during team meetings.
You need to create the report.
Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer and arrange them in the correct order.



Answer:



1 - Select a dataset
2 - Create a report
3 - Add a visualization to the report
4 - Add the report to a new dashboard
Reference:
https://docs.microsoft.com/en-us/power-bi/fundamentals/service-get-started
https://docs.microsoft.com/en-us/power-bi/visuals/power-bi-report-visualizations

NEW QUESTION: 13
A coworker creates a canvas app.
The canvas app contains the following formul
a. The formula is attached to the OnVisible property of the first screen that users see:

```
Collect(
Toolbox,
{
   Tool: "Hammer",
   Quantity: 1
},
{
   Tool: "Screwdriver",
   Quantity: 2
}
)
```

You are updating the canvas app.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area	Yes	No
The formula will update multiple records in a data source named Toolbox if the records exist.	○	○
A local collection is created to store data if a data source named Toolbox does not already exist.	○	○
If a collection named Toolbox exists the formula will clear any existing records before making any changes.	○	○

Answer:

Answer Area	Yes	No
The formula will update multiple records in a data source named Toolbox if the records exist.	○	$\boxed{\circ}$
A local collection is created to store data if a data source named Toolbox does not already exist.	$\boxed{\circ}$	○
If a collection named Toolbox exists the formula will clear any existing records before making any changes.	○	$\boxed{\circ}$

Reference:

https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/functions/function-clear-collect-clearcollect

NEW QUESTION: 14

You need to implement logic in the app for lost sales.

What should you do?

A. Create a business process flow.

B. Define a business rule for the Sales Log edit form.

C. Set the required field property of the Won/Lost field to Required.

D. Create a formula for the Description field that uses the Update function.

Answer: B (LEAVE A REPLY)

Scenario: Requests for quotes are currently stored in a Sales Log workbook. The workbook includes the following information:
* Status of the Request for Quote (RFQ) with the values of Won, Lost, No Bid, and Cancelled
Salespeople often do not set status of RFQs in the Sales Log to Won when a sale is closed and the customer purchase order is received.
You can create business rules and recommendations to apply logic and validations without writing code or creating plug-ins. Business rules provide a simple interface to implement and maintain fast-changing and commonly used rules.
Business rules defined for an entity apply to both canvas apps and model-driven apps if the entity is used in the app.
Reference:
https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/data-platform-create-business-rule Create solutions Testlet 3 This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.
To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.
At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.
To start the case study
To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. When you are ready to answer a question, click the Question button to return to the question.
Background
Current environment
Sales representatives submit weekly status reports to regional managers. There is no standardized format for these status reports. The process for managing status reports is challenging.
Wide World Importers has decided to use Microsoft 365, Microsoft Azure, and Power Platform for future app development. Both Wide World Importers and Tailwind Traders have identical Microsoft SharePoint and Azure configurations. Both companies use separate tenants.
Requirements
Application

You must create a mobile app to streamline the creation of status reports by sales representatives. You must make the same app available to Tailwind Traders. The mobile app must meet the following requirements:
* Minimize the use of code.
* Use formulas and expressions when necessary.
* Support a variety of visual layouts.
* Use a SharePoint list to store information about regional managers and sales representatives.
* Use Azure SQL Database to store other data.

Status reports
* Sales representatives must provide a weekly status report for all work processes each Monday.
* Representatives must enter the following information for each process:

Information type	Values
Category	Pipelines, Work/life balance, Coaching/Mentoring, or Communications
Status	At Risk, Acceptable, or Great
Notes	Notes as appropriate

* If a sales representative submits a status report and assigns the At Risk status to a process, the app must prompt the sales representative to enter a detailed description for the risk. This information must be emailed to the regional manager. If the category is Work/life balance, the information must be carbon copied to the human resources department.
* If a sales representative does not submit a weekly status report by an agreed upon deadline, the system must send an email to remind the sales representative.
* The app must be able to run both online and offline. If the mobile device on which the app runs is connected to the internet, the app must immediately submit the status report.
* You must display a visual indicator in the app so that sales representatives know whether the app is offline before submitting reports.

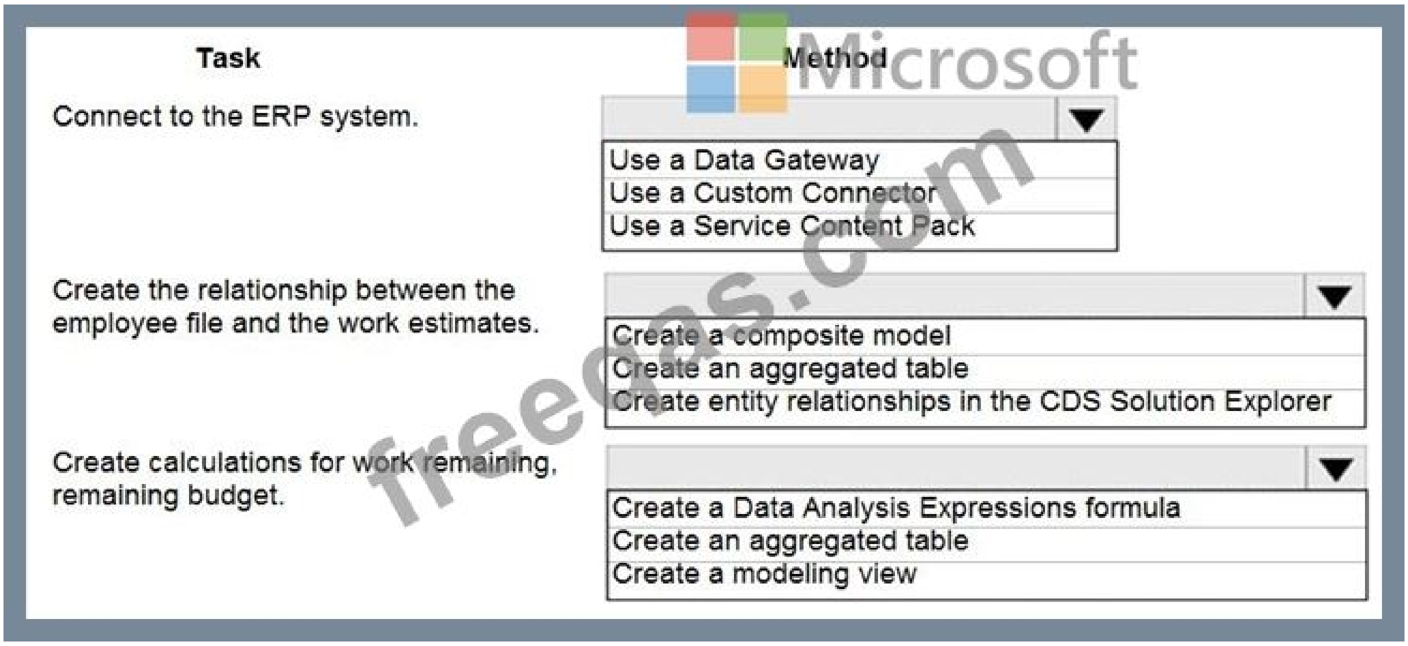
* When data is submitted offline, the data must be stored in the app until the app is back online.
Technical
Regardless of the UI layouts, the data recorded must be standardized in the Azure DB tables.
You must use global variables in the app.
Deployment
* Before deploying the app to production, you must ensure that the app conforms to Microsoft accessibility and performance guidelines.
* The completed app and all supporting components must be provided to Tailwind Traders.
* Tailwind Traders must not be able to make changes to any of the components.
* You must use the following version control numbering scheme:
* Major: The last two digits of the year the app is packaged
* Minor: Two digits that represent the month when the app is packaged
* Build: A number that is incremented to represent significant changes to the app
* Revision: The incremented revision for a package
* New versions of the application must completely replace previous versions of the app.
* When identifying versions of the app solution, all dependencies, entities, and user interfaces components must be identified to avoid any unintentional issues caused by reverting individual components to a previous version.
* Previous versions of the mobile app must be available for roll back purposes.
* All versions of software that have been used in production must be retained for five years.
Issues
The mobile app has been live for several months. Eight versions of the app have been released since the initial version of the app was deployed to sales representatives. You must revert the app to an earlier version and redesign some features.
User1 often works in a warehouse that does not have internet connectivity. User1 needs to edit an existing status report and submit a new status report.
Several sales representatives have accessibility restrictions. User2 is visually impaired and cannot see images.
User3 is unable to use a mouse.

NEW QUESTION: 15
You are creating a capacity planning dashboard with Power BI desktop.
The dashboard must be able to be used within a model-driven manufacturing planning app as well as be embedded within a Microsoft Teams channel.
The data sources are as follows:

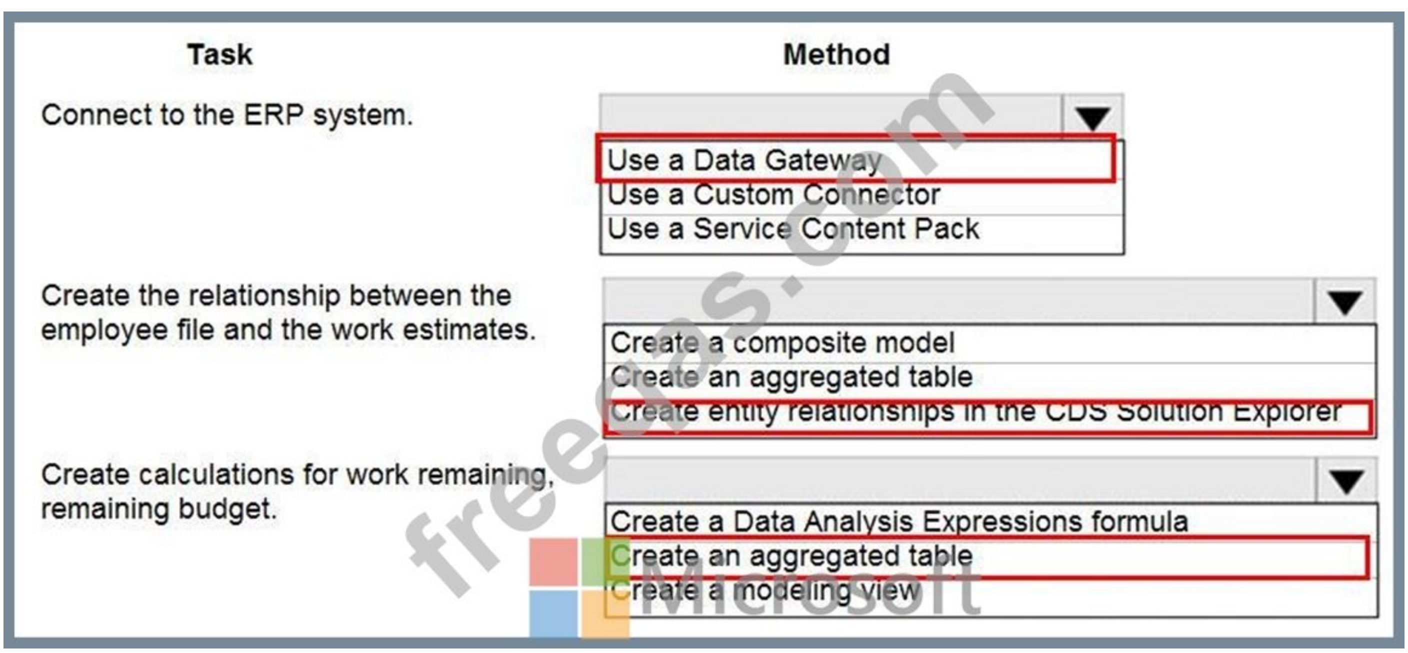
Type of data	Data source
Sales log that show pending sales by product	Microsoft Excel workbook
Work estimates, cost estimates, and start and ending dates for each job activity by employee	Common Data Service entity
Actual work values and associated costs of work to date by job activity and employee	On-premises Microsoft SQL Server-based ERP system
Employee information	On-premises Microsoft SQL Server-based ERP system

You need to determine the appropriate method for accomplishing each task.

Which methods should you use? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.



Answer:



Reference:
https://docs.microsoft.com/en-us/power-bi/connect-data/service-gateway-sql-tutorial
https://docs.microsoft.com/en-us/powerapps/maker/data-platform/create-edit-entity-relationships
https://docs.microsoft.com/en-us/powerapps/maker/data-platform/define-rollup-fields

NEW QUESTION: 16

DRAG DROP

You publish the first version of the app and solution on November 1, 2020.

You need to create the version numbers for the app and the solution.

Which version numbers should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.
Select and Place:

Answer:

Explanation:
Box 1: 1.0.0.0
When identifying versions of the app solution, all dependencies, entities, and user interfaces components must be identified to avoid any unintentional issues caused by reverting individual components to a previous version.
A solution's version has the following format: major.minor.build.revision. An update must have a higher major, minor, build or revision number than the parent solution. For example, for a base solution version
3.1.5.7, a small update could be a version 3.1.5.8 or a slightly more signficant update could have version
3.1.7.0. A substantially more significant update could be version 3.2.0.0.
Box 2: 20.11.1.1
Scenario:
* You must use the following version control numbering scheme:
- Major: The last two digits of the year the app is packaged
- Minor: Two digits that represent the month when the app is packaged

- Build: A number that is incremented to represent significant changes to the app
- Revision: The incremented revision for a package

New versions of the application must completely replace previous versions of the app.

Reference:

https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/update-solutions

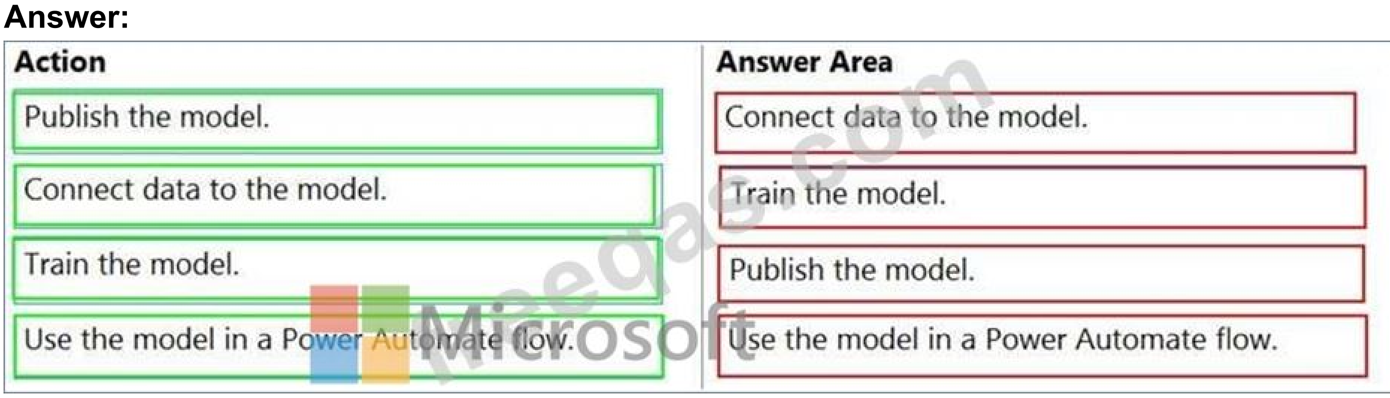
NEW QUESTION: 17

A company uses Power Automate and Power Apps to streamline business processes.

You need to use AI Builder to analyze customer reviews of the company's products.

In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

Answer:



Reference:

https://powerapps.microsoft.com/en-us/blog/introducing-simplified-ai-builder-experience-in-power-automate/

NEW QUESTION: 18

You are creating a canvas app.

You need to store and retrieve small amounts of data on a local device when the app is offline.
Which set of functions should you use?

A. SaveData, LoadData

B. Set, Patch

C. Patch, Collect

D. Set, Collect

Answer: (SHOW ANSWER)

LoadData and SaveData combine to form a simple mechanism to store small amounts of data on a local device. By using these functions, you can add simple offline capabilities to your app.

Reference:

https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/offline-apps

NEW QUESTION: 19

You are creating entities in a Common Data Service database to capture sales data.

You create an entity named Sales that includes the following fields:

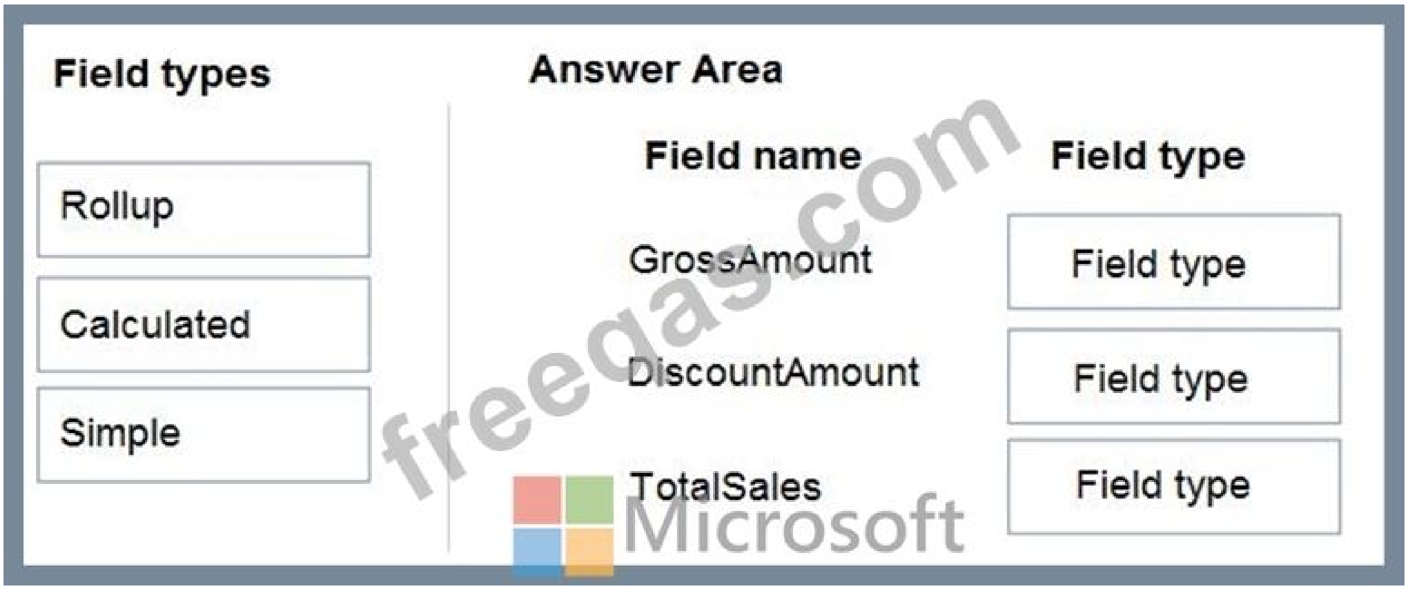
Field	Description
SalesPerson	The name of the salesperson who made the sale
Quantity	The number of units sold
Rate	The sale price per unit
GrossAmount	A value obtained by multiplaying the Quantity times the Rate. This value is for display purposes only
DiscountAmount	An amount that a salesperson enters into the app to discount a sale
NetAmount	A value obtained by subtracting the DiscountAmount from the GrossAmount

You create a new entity that includes a field named TotalSales. The field is used to capture the aggregated sales for each salesperson.

You need to configure the fields for the entities.

Which field types should you use? To answer, drag the appropriate field types to the correct field names. Each field type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.



Answer:

Reference:
https://docs.microsoft.com/en-us/powerapps/developer/data-platform/calculated-rollup-attributes

NEW QUESTION: 20

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You are developing a model-driven app that uses a Common Data Service database. App users will have a variety of different security roles.
Development and testing must be performed using production dat
a. Multiple testers must be used at each testing stage.
You need to provision and configure new environments for development and testing.
Solution:
Provision a trial environment named T1 and a sandbox environment named S1.
Copy the production environment to T1 and S1.
Use T1 for development and S1 for testing.
Does the solution meet the goal?

A. Yes

B. No

Answer: B (LEAVE A REPLY)

Using trial environments, companies and customers can try out new features and solutions.

Do not use a trial environment for development.

A sandbox environment is any non-production environment of Microsoft Dataverse. Isolated from production, a sandbox environment is the place to safely develop and test application changes with low risk.

Reference:

https://docs.microsoft.com/en-us/power-platform/admin/trial-environments

https://docs.microsoft.com/en-us/power-platform/admin/sandbox-environments

NEW QUESTION: 21

You need to create a model-driven app without using code.

Which tools should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Requirement	Tool
Select the forms and views that the app will use.	Site Map designer Solution Explorer App designer Entity view
Design the navigation for the app.	Site Map designer Dynamics 365 Admin center Microsoft Azure DevOps

Reference:
https://docs.microsoft.com/en-us/powerapps/maker/model-driven-apps/create-edit-views-app-designer
https://docs.microsoft.com/en-us/powerapps/maker/model-driven-apps/create-site-map-app

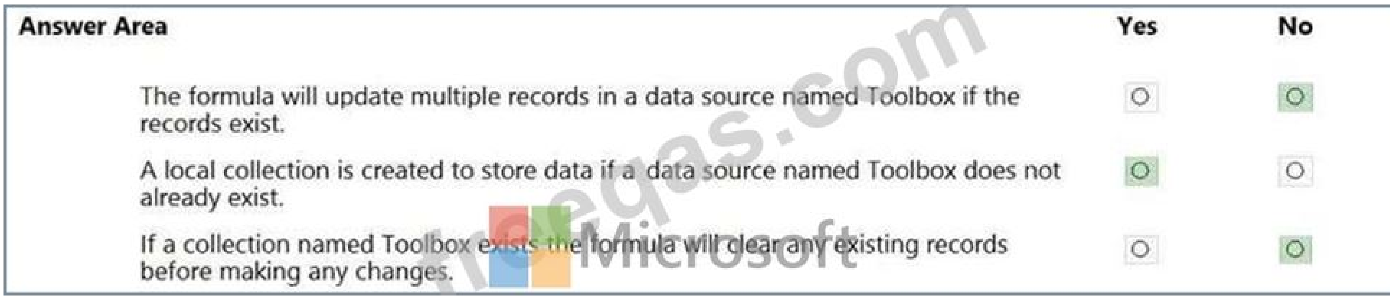
NEW QUESTION: 22
HOTSPOT
A coworker creates a canvas app.
The canvas app contains the following formula. The formula is attached to the OnVisible property of the first screen that users see:

```
Collect(
Toolbox,
{
   Tool: "Hammer",
   Quantity: 1
},
{
   Tool: "Screwdriver",
   Quantity: 2
}
)
```

You are updating the canvas app.
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.
Hot Area:

Answer Area	Yes	No
The formula will update multiple records in a data source named Toolbox if the records exist.	○	○
A local collection is created to store data if a data source named Toolbox does not already exist.	○	○
If a collection named Toolbox exists the formula will clear any existing records before making any changes.	○	○

Answer:



Explanation:

Box 1: No

Records are added, not updated.

Box 2: Yes

The Collect function adds records to a data source.

Syntax: Collect(DataSource, Item, ...)

DataSource - Required. The data source that you want to add data to. If it doesn't already exist, a new collection is created.

Item(s) - Required. One or more records or tables to add to the data source.

Box 3: No

No records are cleared.

Reference:

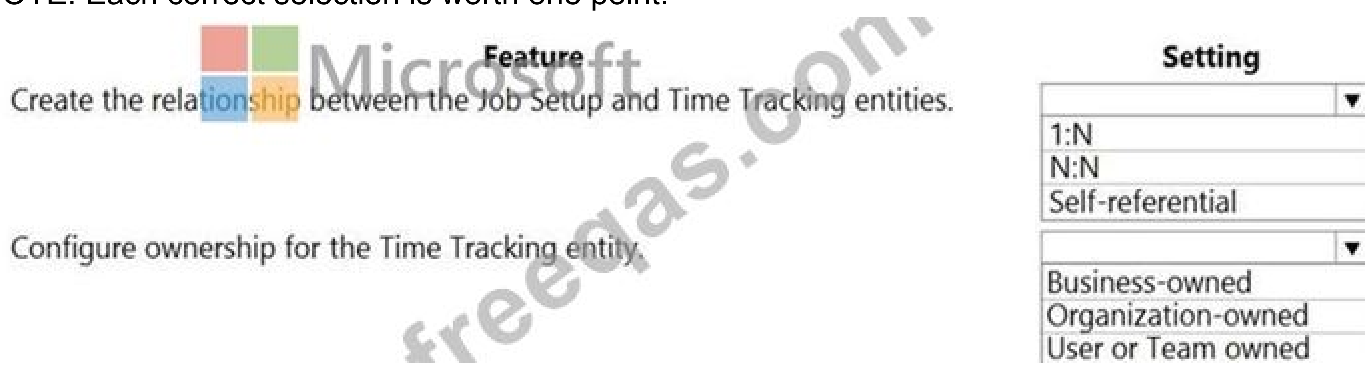
https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/functions/function-clear-collect-clearcollect

NEW QUESTION: 23

You need to configure the system to meet the requirements.

What should you use? To answer, select the appropriate options in the answer area.

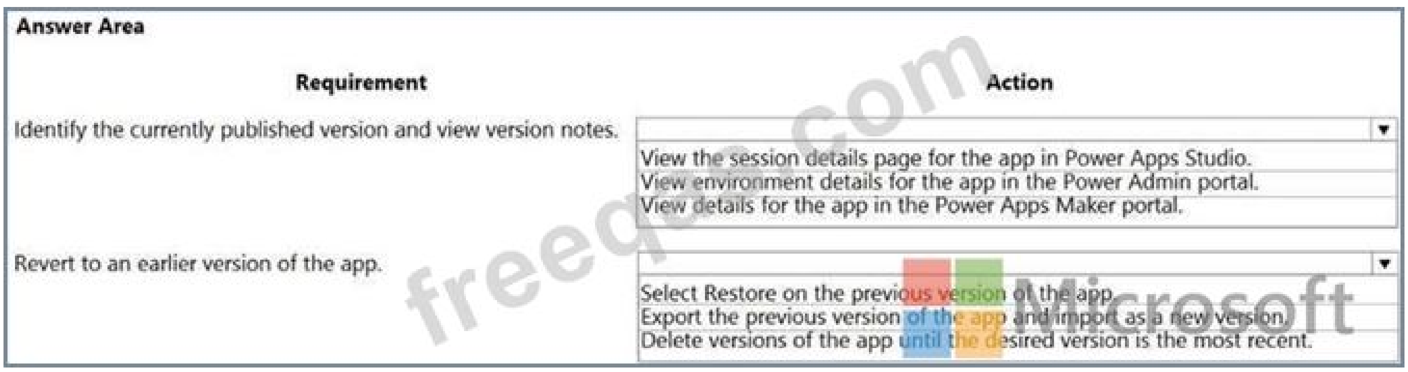
NOTE: Each correct selection is worth one point.



Answer:

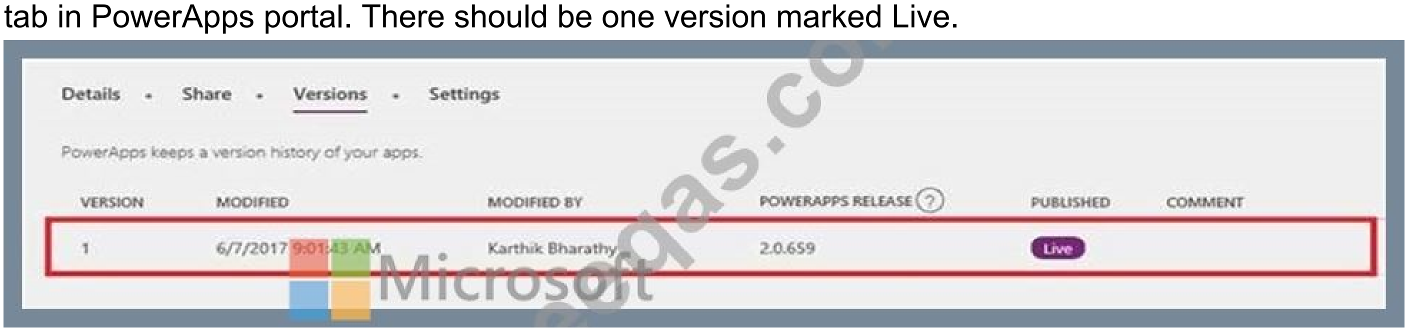
Reference:
https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/types-of-entities

NEW QUESTION: 24
HOTSPOT
You need to roll back the mobile app to an earlier version.
What should you do? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.
Hot Area:



Answer:

Explanation:
Box 1: View the sessions details page for the app in Power Apps Studio
Use PowerApps Studio, select the App, and choose and you will be directed to the app's Versions tab in PowerApps portal. There should be one version marked Live.



Box 2: Select Restore on the previous version of the app.
Restore an app from your account
1. Open powerapps.com, and then click or tap Apps in the left navigation bar.
2. Near the right edge, click or tap the info icon for the app that you want to restore.
3. Click or tap the Versions tab, and then click or tap Restore for the version that you want to restore.

Reference:

https://powerapps.microsoft.com/sk-sk/blog/saveandpublish/

https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/restore-an-app

NEW QUESTION: 25

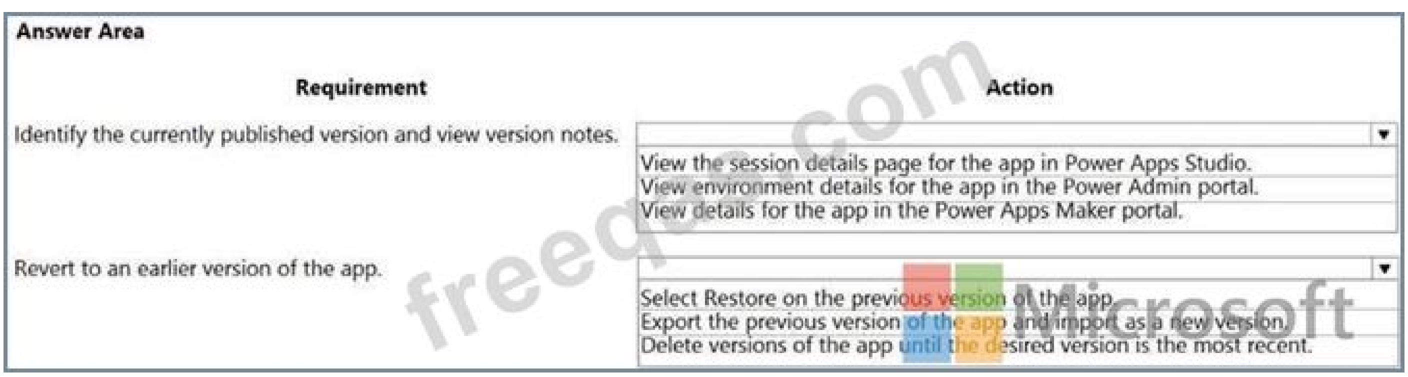
HOTSPOT

You need to roll back the mobile app to an earlier version.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:



Answer:

NEW QUESTION: 26

You create a canvas app for technicians at a computer store. You assign technicians cases to work on.
The technicians update cases at the end of customer site visit.
The manager wants the technicians to sell warranties to the customers. If a customer agrees to purchase a warranty, technicians use the canvas app to immediately alert the sales team, and then the technician records details about the warranty into the app.
You need to create a flow to alert the sales team.
Which type of trigger should you use?

A. Flow button for mobile
B. Power Apps
C. Office 365 Outlook
D. Common Data Service

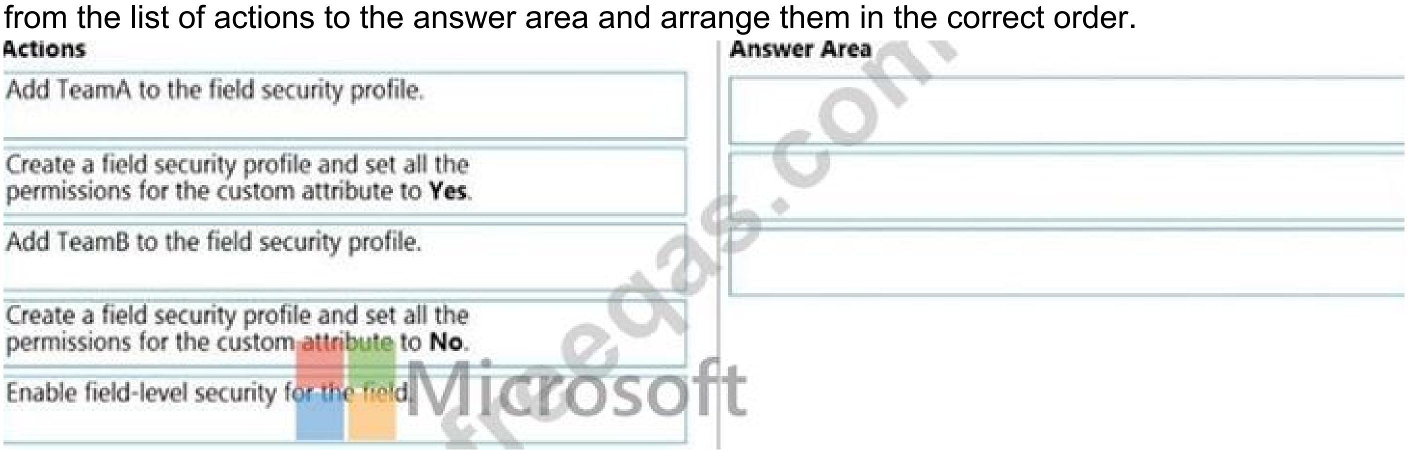
Answer: (SHOW ANSWER)

Create a button flow to run routine tasks by simply tapping a button. Customize your flow by allowing the user to provide specific details that will be used when the flow runs.

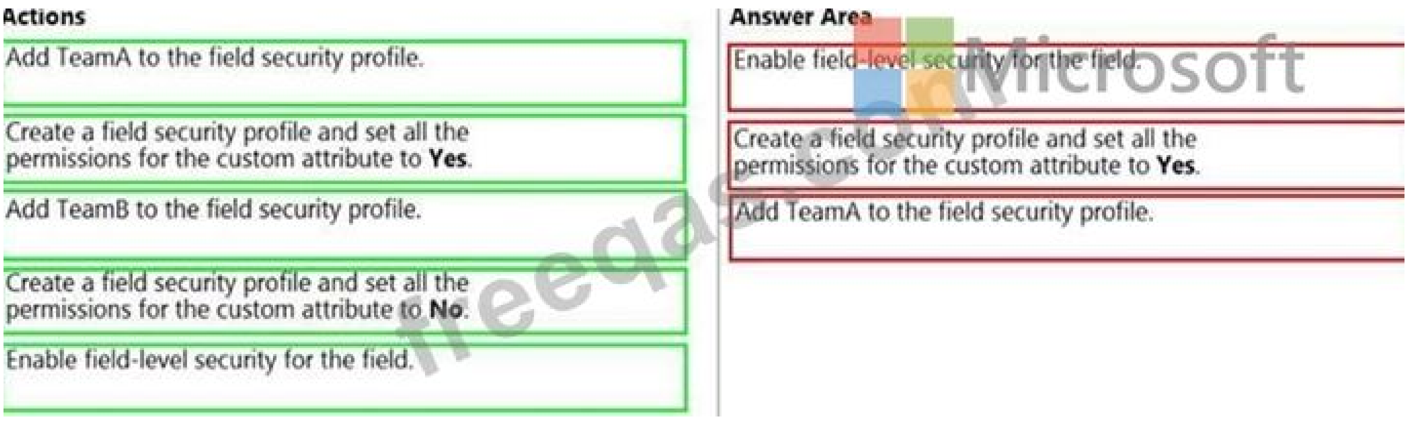
Note: There are many repetitive tasks that we all wish we could run with just a tap of a button. For example, you may need to quickly email your team to remind them to join the daily team sync, or you may want to start a new Visual Studio Codespaces build of your code base after you've been notified that there are no more checkins planned for the day. Button flows allow you to accomplish these and many other tasks simply by tapping a button on your mobile device.
Reference:
https://docs.microsoft.com/en-us/power-automate/button-flow-with-user-input-tokens

NEW QUESTION: 27
You create a canvas app within a Power Platform environment.
You need to identify potential accessibility issues for the canvas app before making the app available to other users.
Which tool should you use?
A. Solution Checker
B. App Checker
C. Portal Checker
Answer: B (LEAVE A REPLY)

NEW QUESTION: 28
You create a custom field on the Account entity.
Members of TeamA must have full access to the field. Members of TeamB must have no access to the field.
You need to configure security.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.



Answer:



Explanation:
Step 1: Enable field security for the field
Step 2: Create a field security profile and set all the permissions for the custom attribute to Yes.
Step 3: Add TeamA to the field security profile.
Note: Field-level security is available for the default fields on most out-of-box entities, custom fields, and custom fields on custom entities. Field-level security is managed by the security profiles. To implement field-level security, a system administrator performs the following tasks.
* Enable field security on one or more fields for a given entity.
* Associate one more existing security profiles, or create one or more new security profiles to grant the appropriate access to specific users or teams.

NEW QUESTION: 29
You create a canvas app for technicians at a computer store. You assign technicians cases to work on. The technicians update cases at the end of customer site visit.
The manager wants the technicians to sell warranties to the customers. If a customer agrees to purchase a warranty, technicians use the canvas app to immediately alert the sales team, and then the technician records details about the warranty into the app.
You need to create a flow to alert the sales team.
Which type of trigger should you use?
A. Flow button for mobile
B. Power Apps
C. Office 365 Outlook
D. Common Data Service
Answer: (SHOW ANSWER)
Create a button flow to run routine tasks by simply tapping a button. Customize your flow by allowing the user to provide specific details that will be used when the flow runs.
Note: There are many repetitive tasks that we all wish we could run with just a tap of a button. For example, you may need to quickly email your team to remind them to join the daily team sync, or you may want to start a new Visual Studio Codespaces build of your code base after you've been notified that there are no more checkins planned for the day. NEW QUESTION: 30

You need to meet the requirements for sales representative that submit status reports.

How should you configure the flow?

A. Add a parallel branch that uses the value of a dynamic content variable

B. Add a number functions action that evaluates the risk value by using a static variable to determine if an email is required

C. Add a condition that evaluates the risk value by using a dynamic content variable

D. Add a data operation action that evaluates a dynamic content variable

Answer: C (LEAVE A REPLY)

Salespeople often do not set status of RFQs in the Sales Log to Won when a sale is closed and the customer purchase order is received.

Include a dashboard that shows all currently active quotes, their status in the sales cycle, the probability of closing, and estimated manufacturing and installation dates, by customer, product division, status, and salesperson.

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. When you are ready to answer a question, click the Question button to return to the question.

Background

Current environment

Overview

Operations for the company are managed very informally. Only a small number of long-term employees are aware of all manufacturing processes.

NEW QUESTION: 31

You are creating a Power Automate flow.

You have an array that contains items with different color attributes. You plan to filter the array by using the following filter expression within the flow:
@or(equals(item()?['color'], 'red'),contains(item()?['color'],'blue'))
The filter returns results only when the expression resolves to true.
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Statements	Yes	No
The filter expression yields a result if the array contains the color **orange**	○	○
The filter expression yields a result if the array contains the color **red**	○	○
The filter expression yields a result if the array contains the color **sky blue**	○	○

Answer:

Statements	Yes	No
The filter expression yields a result if the array contains the color **orange**	○	$\boxed{\circ}$
The filter expression yields a result if the array contains the color **red**	$\boxed{\circ}$	○
The filter expression yields a result if the array contains the color **sky blue**	$\boxed{\circ}$	○

NEW QUESTION: 32
You are designing a canvas app that will be used by all users including users who have vision impairments.
Which outcome is achieved by each action? To answer, drag the appropriate outcomes to the correct actions. Each outcome may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

Answer:

Reference:

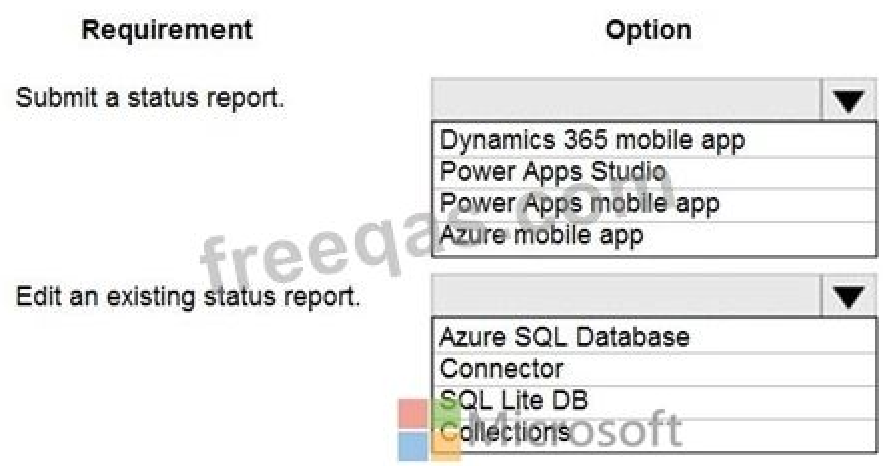
https://docs.microsoft.com/sv-se/powerapps/maker/canvas-apps/accessible-apps

NEW QUESTION: 33

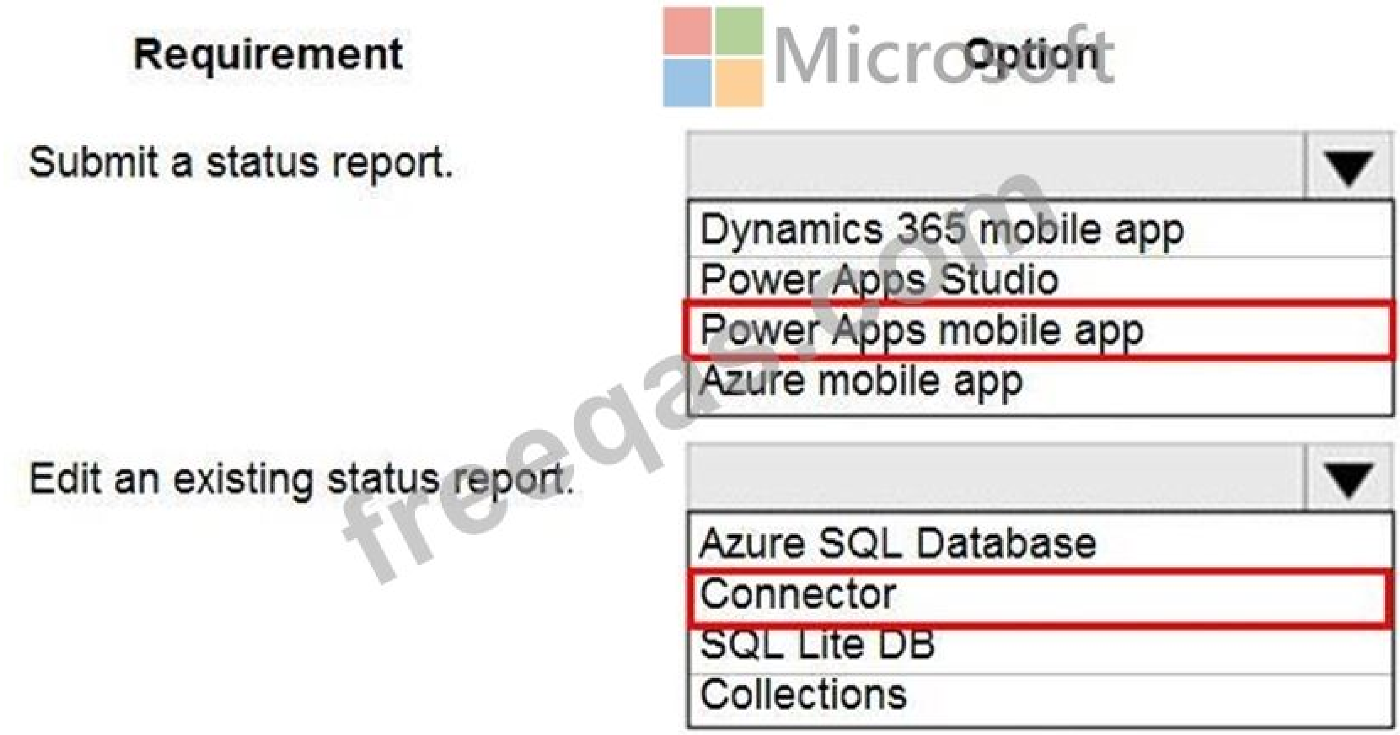
You need to resolve the issue for User1.

What should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

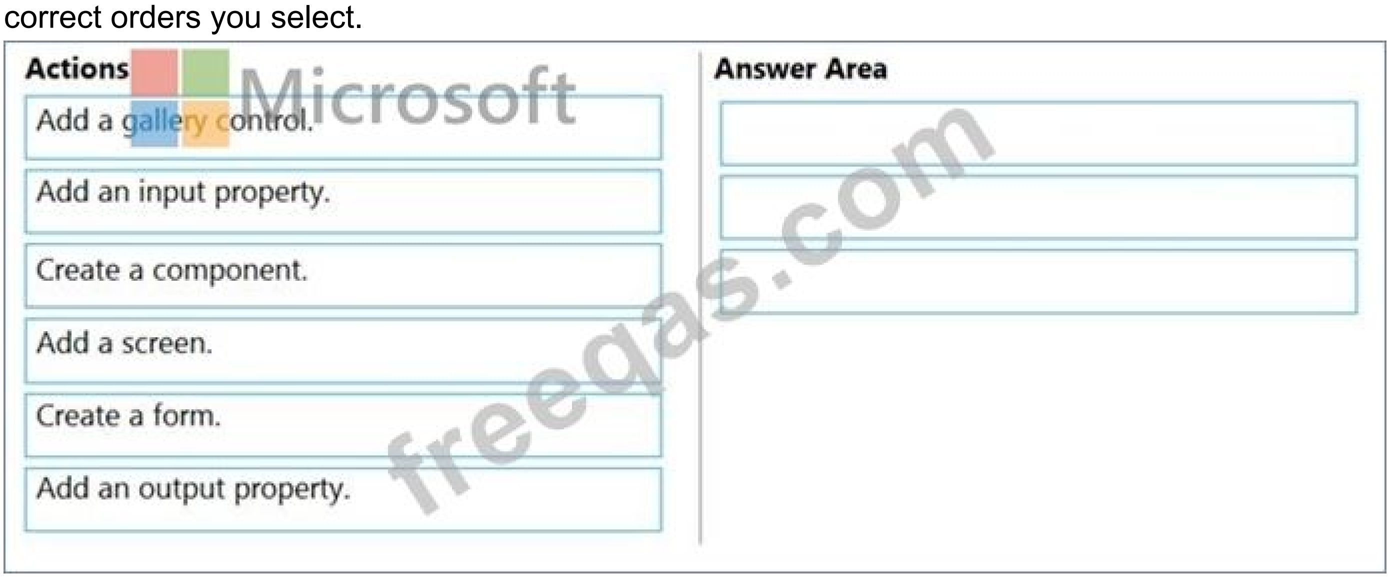


Answer:

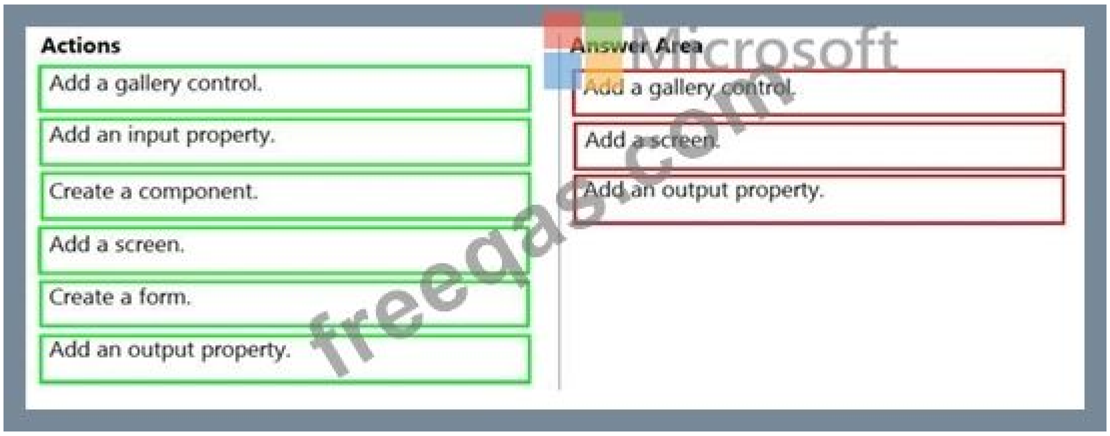


Reference:
https://powerapps.microsoft.com/en-us/blog/implementing-offline-capability-in-your-app/

NEW QUESTION: 34
You create an app with multiple screens.
Test users report that the size and type of gallery displayed on each screen are different. You must improve the consistency for the app screens.
You need to create a reusable gallery that displays information based on the current record.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.
NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.



Answer:



Explanation:

Step 1: Add a gallery control

Add a gallery to a blank screen

1. On the Insert tab, select Gallery, and then select Vertical.

2. On the Properties tab of the right-hand pane, open the Items list, and then select your Gallery

Step 2: Add a screen Add a gallery in a screen

1. On the Home tab, select New screen > List screen.

A screen that contains a Gallery control and other controls, such as a search bar, appears.

Step 3: Add an input property

Input property is how a component receives data to be used in the component.

Incorrect Answers:

Output property is used to emit data or component state. For example, the Selected property on a Gallery control is an output property.

Reference:

https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/add-gallery

https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/create-component

NEW QUESTION: 35

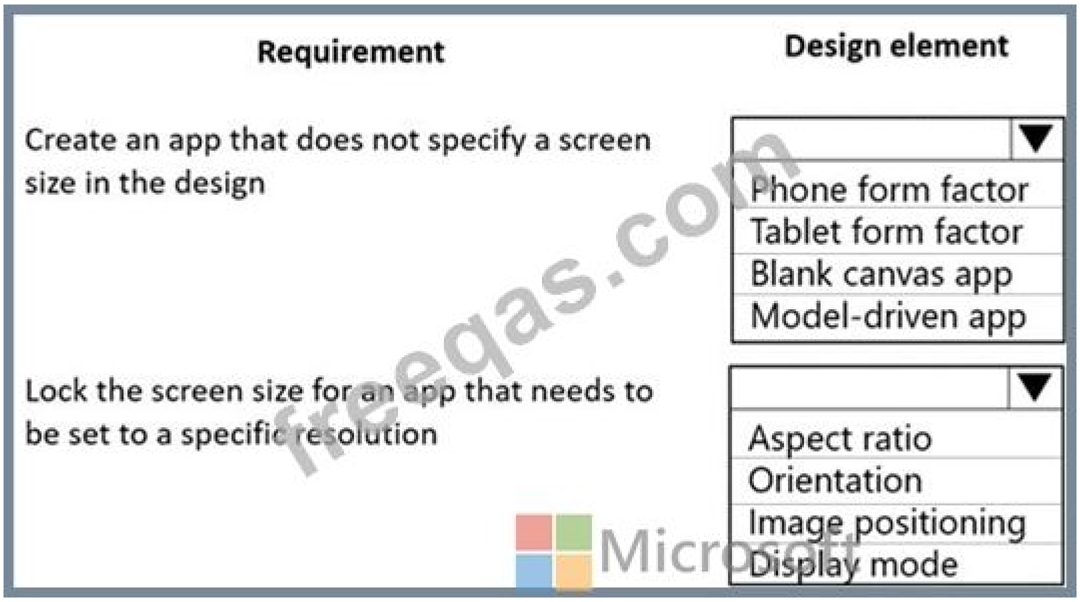
A company is creating new app for use by technicians.

Previous versions of the app do not render properly on tablets and phones.

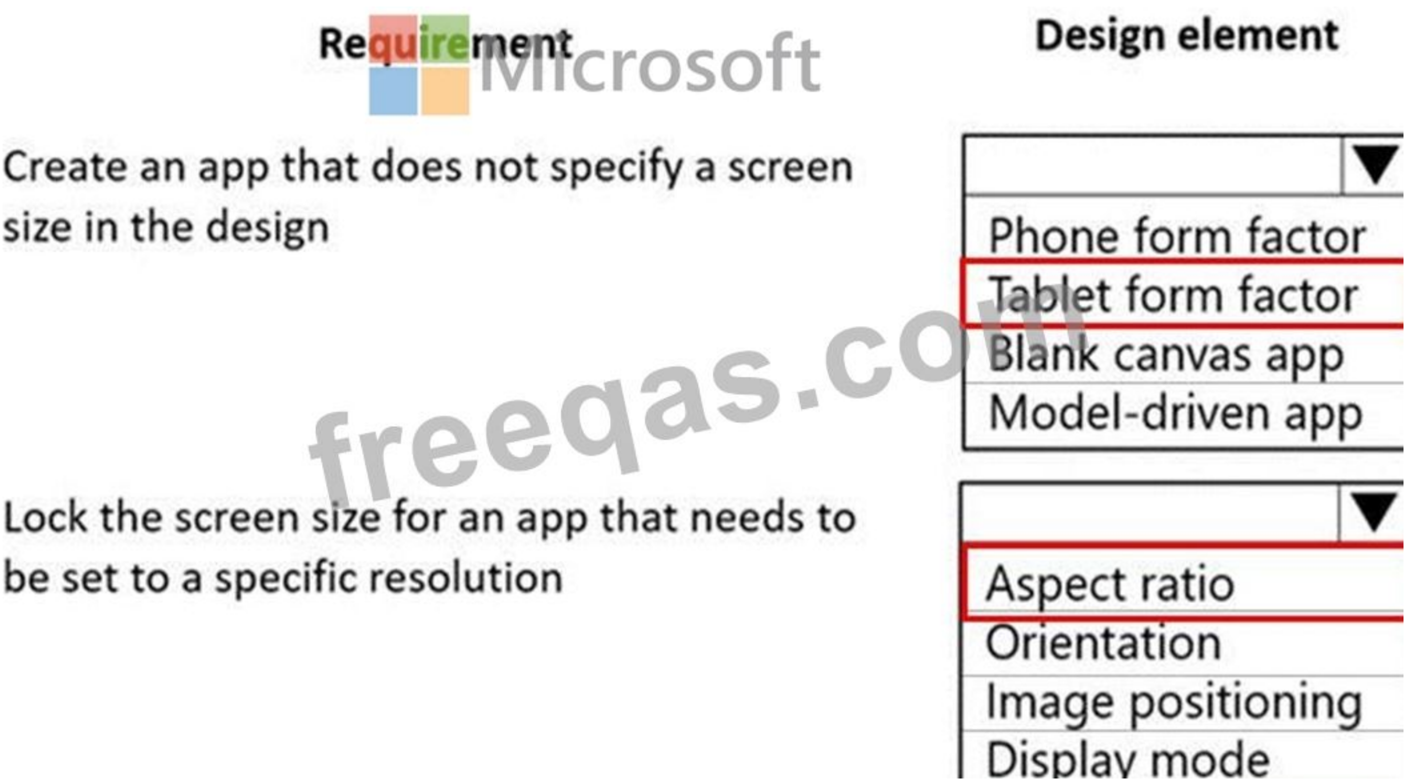
You need to ensure that the new app renders properly on all devices.

Which design element should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.



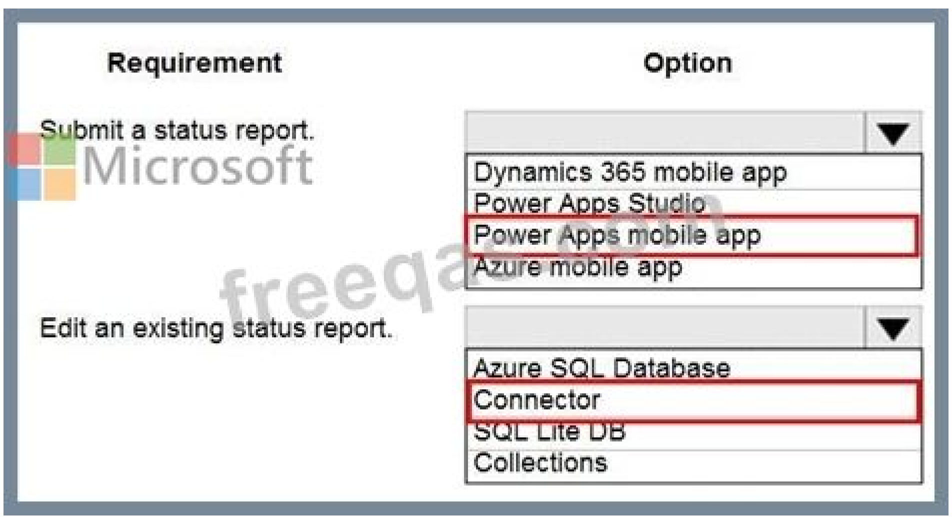
Answer:



Reference:
https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/set-aspect-ratio-portrait-landscape

NEW QUESTION: 36
You need to resolve the issue for User1.
What should you use? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:



Reference:
https://powerapps.microsoft.com/en-us/blog/implementing-offline-capability-in-your-app/

NEW QUESTION: 37

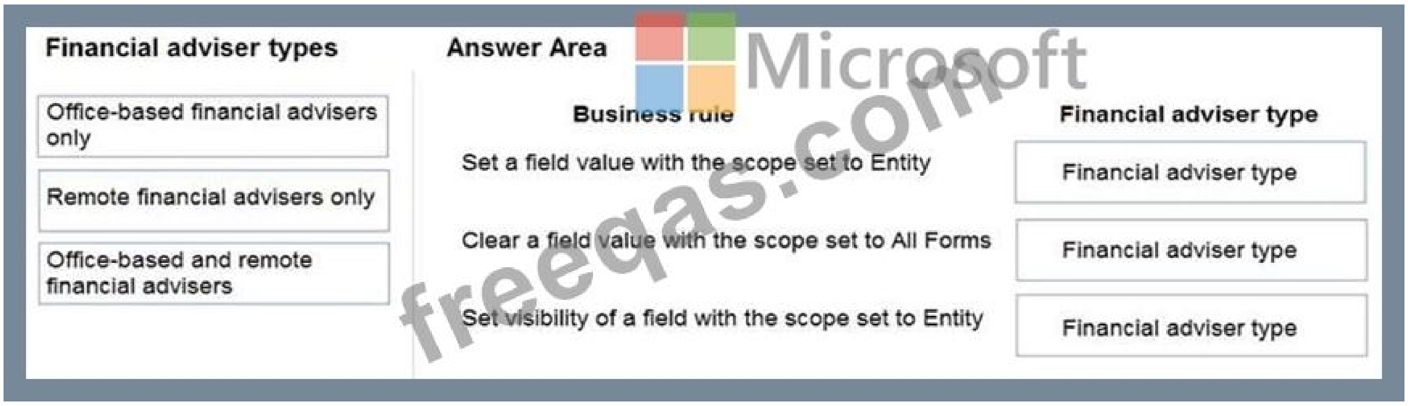
You create the following apps for a company that provides financial guidance services: a model-driven app for financial advisers that work in the company's offices and a canvas app for remote financial advisers.

You need to create business rules for a custom counselling entity used by all financial advisers.

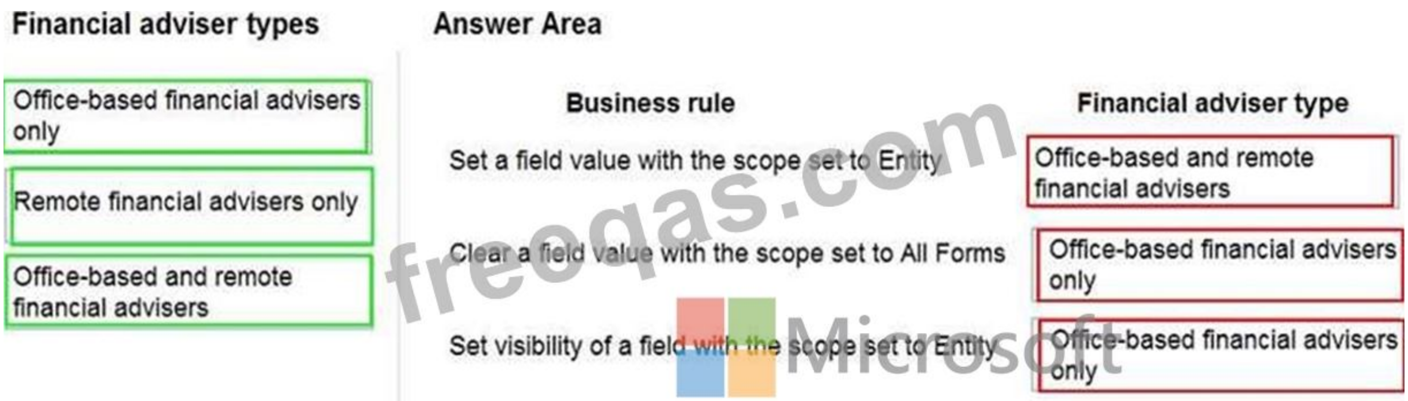
Who will be affected by the business rules?

To answer, drag the appropriate financial adviser types to the correct business rules. Each financial adviser type may be used once, more than once, or not at all. You may need to drag the split bat between panes or scroll to view content.

NOTE: Each correct selection is worth one point.



Answer:



Reference:
https://docs.microsoft.com/en-us/powerapps/maker/data-platform/data-platform-create-business-rule

NEW QUESTION: 38

A company uses several forms for biannual performance evaluations. The company conducts the evaluations by using a pen and paper process. The evaluations contain several performance areas that have a score of 1-10. A paragraph explains the score.

The company must scan completed performance evaluations into a Common Data Service entity by using a Power Apps app. The information in the documents must automatically map to entities and convert into quantifiable information.

If any key phrases in the scored topics cause concern, the company must follow a series of actions to prepare for a follow up.

You need to extract the information and perform the actions when the evaluations are scanned.

Which component should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement	Component
Convert the evaluations from images to data	AI Builder Power BI Dataflows Business rules
Convert a form processing variable to an integer	Initialize variable Add dynamic content Append to string variable Extract entities and their types from text
Use the flow action to convert a form processing variable to an integer	Scope Do until Condition Apply to each

Answer:

Requirement	Component
Convert the evaluations from images to data	AI Builder
Convert a form processing variable to an integer	Extract entities and their types from text
Use the flow action to convert a form processing variable to an integer	Scope

Reference:
https://docs.microsoft.com/en-us/ai-builder/object-detector-component-in-powerapps
https://powerapps.microsoft.com/en-us/blog/new-ai-builder-models-are-now-generally-available/

NEW QUESTION: 39

You have a Power Apps solution that includes three model-driven apps, a business process flow, and a scheduled flow. The solution is deployed to a datacentre in the United States.

You plan to deploy the solution to Canada.
You need to identify applicable government regulations for all components of the solution.
Which three actions should you perform? Each correct answer presents part of the solution.
NOTE: Each correct selection is worth one point.

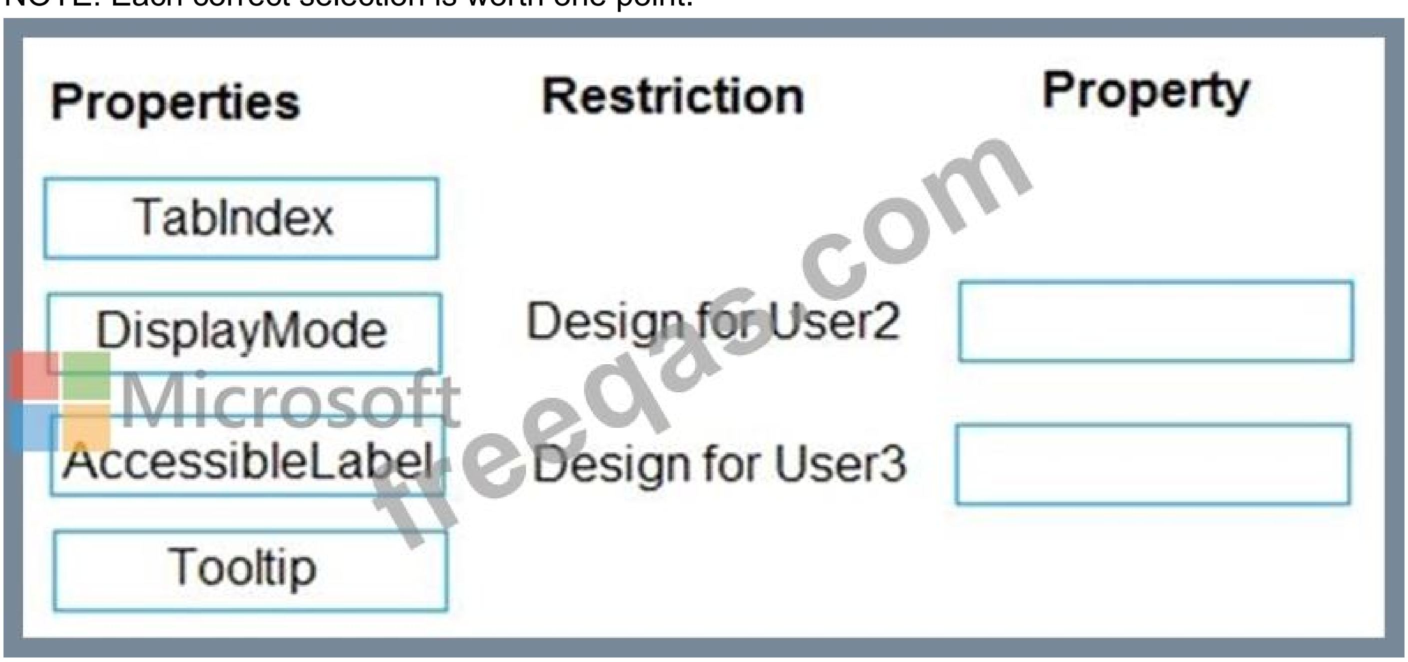
A. View results in the Service Trust portal.
B. Check the results of the Solution checker.
C. Identify regulations for the region where the tenant resides.
D. Identify all regulations for the region where the Common Data Service database resides.
E. Configure data loss prevention (DLP) policies in the Power Platform Admin center.

Answer: A,D,E (LEAVE A REPLY)

A: The Microsoft Service Trust Portal provides a variety of content, tools, and other resources about Microsoft security, privacy, and compliance practices.
D: The Service Trust Portal contains details about Microsoft's implementation of controls and processes that protect our cloud services and the customer data therein.
Reference:
https://docs.microsoft.com/en-us/microsoft-365/compliance/get-started-with-service-trust-portal

NEW QUESTION: 40

You need to modify the app design to meet the accessibility needs of the sales associates.
Which properties should you configure? To answer, drag the appropriate properties to the correct restrictions. Each property may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.



Answer:

NEW QUESTION: 41

You need to implement logic in the app for lost sales.

What should you do?

A. Create a business process flow.

B. Define a business rule for the Sales Log edit form.

C. Set the required field property of the Won/Lost field to Required.

D. Create a formula for the Description field that uses the Update function.

Answer: B (LEAVE A REPLY)

Scenario: Requests for quotes are currently stored in a Sales Log workbook. The workbook includes the following information:

* Status of the Request for Quote (RFQ) with the values of Won, Lost, No Bid, and Cancelled

Salespeople often do not set status of RFQs in the Sales Log to Won when a sale is closed and the customer purchase order is received.

You can create business rules and recommendations to apply logic and validations without writing code or creating plug-ins. Business rules provide a simple interface to implement and maintain fast-changing and commonly used rules.

Business rules defined for an entity apply to both canvas apps and model-driven apps if the entity is used in the app.

Reference:

https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/data-platform-create-business-rule Analyze and visualize data Question Set 1

NEW QUESTION: 42

You have a solution that contains a Power Automate flow, an environment variable, and a model-driven app.

Which three steps should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- Select the managed solution.
- Adjust the version number.
- Publish all changes.
- Select the unmanaged solution.

Answer Area

Answer:

Actions

- Select the managed solution.
- Adjust the version number.
- Publish all changes.
- Select the unmanaged solution.

Answer Area

1. Adjust the version number.
2. Select the managed solution.
3. Publish all changes.

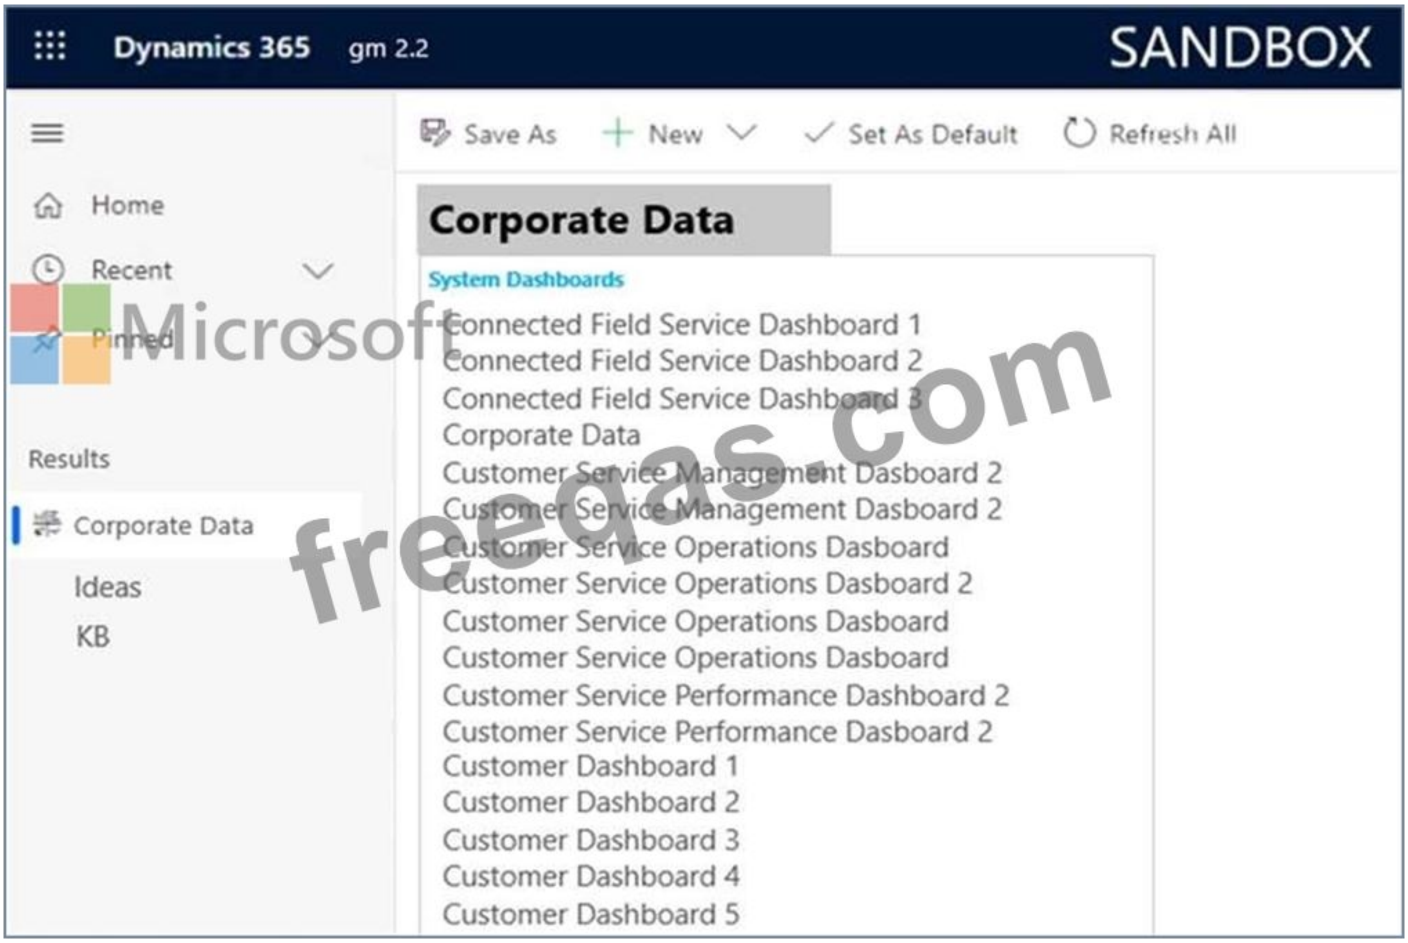
https://powerusers.microsoft.com/t5/Power-Apps-Pro-Dev-ISV/Managed-vs-Unmanaged/td-p/495685

NEW QUESTION: 43

The managers in an organization use a model-driven app. The app should display only one dashboard named Corporate Data.

The managers observe that several dashboards are displayed.



Use the drop-down menus to select the answer choice that answers each question based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

How do you remove all the dashboards from the list of dashboards displayed?

- Open the model-driven app in the app designer and clear all dashboard check boxes except the Corporate Data dashboard.
- Open the site map in the sitemap designer and clear all dashboard check boxes except the Corporate Data subarea except for the Corporate Data dashboard.
- Open the solution and delete all dashboards from the solution except for the Corporate Data dashboard.

You need to remove the Ideas dashboard from the navigation bar. What should you do?

- Open the model-driven app in the app designer and clear the check box for the ideas dashboard
- Open the site map in the sitemap designer and delete the Ideas dashboard from the Results group
- Open the solutions and delete all the Ideas dashboards from the solution

Answer:

How do you remove all the dashboards from the list of dashboards displayed?

- Open the model-driven app in the app designer and clear all dashboard check boxes except the Corporate Data dashboard.
- Open the site map in the sitemap designer and clear all dashboard check boxes except the Corporate Data subarea except for the Corporate Data dashboard.
- Open the solution and delete all dashboards from the solution except for the Corporate Data dashboard.

You need to remove the Ideas dashboard from the navigation bar. What should you do?

NEW QUESTION: 44
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You build a canvas app for a manufacturing company. The company receives parts and materials from many vendors. You create a form to collect information from packing slips.
Receivers must be able to take a picture of packing slips to receive materials instead of manually entering data in the app.
You need to ensure that users can scan packing slip information into the form.
Proposed solution: Use an Entity Extraction model.
Does the solution meet the goal?
A. Yes
B. No
Answer: A (LEAVE A REPLY)
AI Builder entity extraction models recognize specific data in the text that you target based on your business needs.
The model identifies key elements in the text and then classifies them into predefined categories. This can help you transform unstructured data into structured data that's machine-readable. You can then apply processing to retrieve information, extract facts, and answer questions.
Note: Create a canvas app and add the text recognizer AI Builder component to your screen. This component takes a photo or loads an image from the local device, and then processes it to detect and extract text based on the text recognition prebuilt model. If it detects text in the image, the component outputs the text and identifies the instances by showing a rectangle for each instance in the image.

NEW QUESTION: 46

DRAG DROP

You create an app with multiple screens.

Test users report that the size and type of gallery displayed on each screen are different. You must improve the consistency for the app screens.

You need to create a reusable gallery that displays information based on the current record.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

Select and Place:

Actions	Answer Area
Add a gallery control.	
Add an input property.	
Create a component.	
Add a screen.	
Create a form.	
Add an output property.	

Answer:

Actions	Answer Area
Add a gallery control.	Add a gallery control.
Add an input property.	Add a screen.
Create a component.	Add an input property.
Add a screen.	
Create a form.	
Add an output property.	

Explanation:

Step 1: Add a gallery control

Add a gallery to a blank screen

1. On the Insert tab, select Gallery, and then select Vertical.
2. On the Properties tab of the right-hand pane, open the Items list, and then select your Gallery

Step 2: Add a screen Add a gallery in a screen

1. On the Home tab, select New screen > List screen.

A screen that contains a Gallery control and other controls, such as a search bar, appears.

Step 3: Add an input property

Input property is how a component receives data to be used in the component.

Incorrect Answers:

Output property is used to emit data or component state. For example, the Selected property on a Gallery control is an output property.

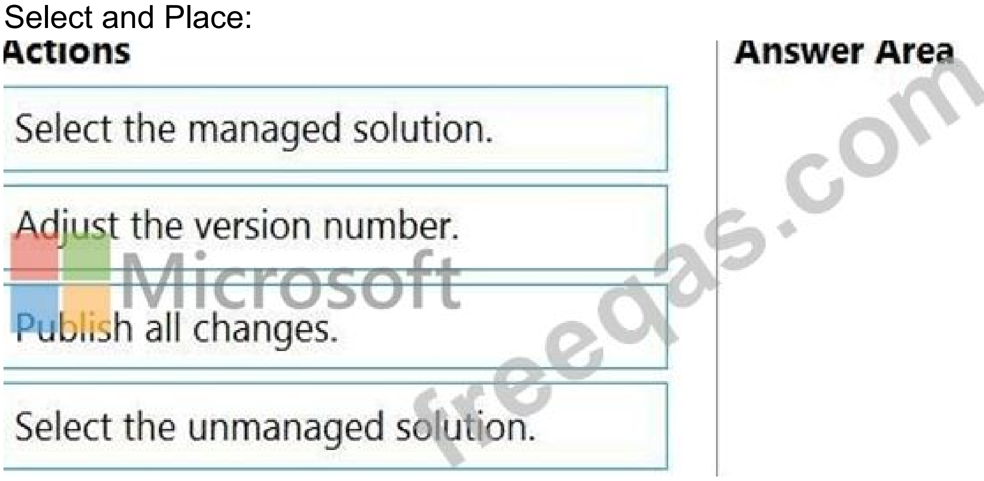
NEW QUESTION: 47

DRAG DROP

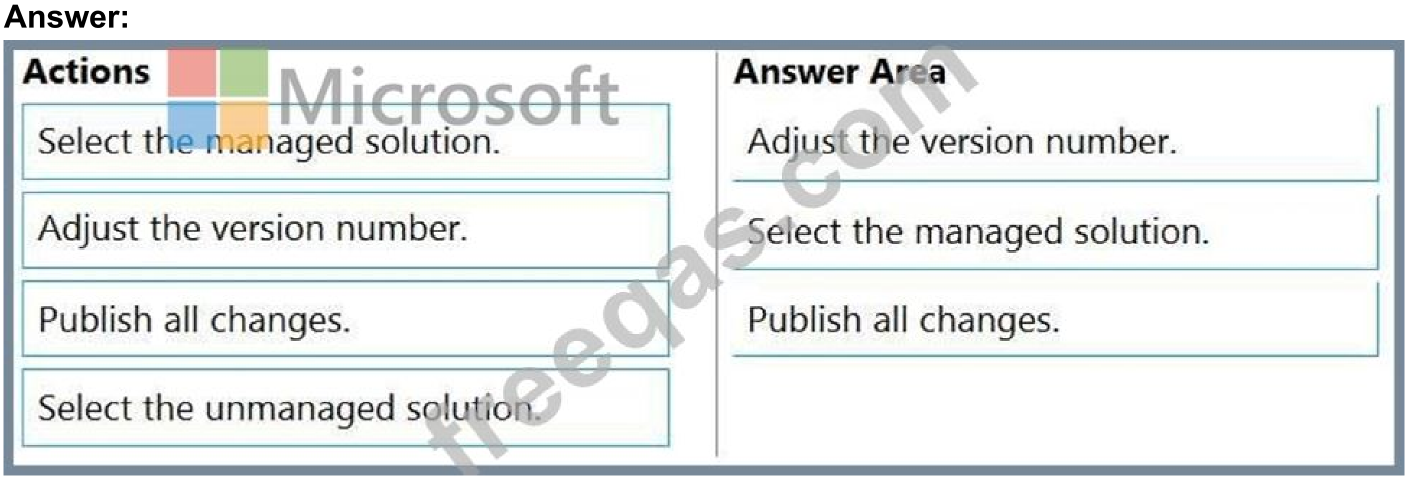
You have a solution that contains a Power Automate flow, an environment variable, and a model-driven app.

Which three steps should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:



Answer:



Explanation:

Step 1: Adjust the version number.

Step 2: Select the managed solution.

Managed Solution: A managed solution is a finalized solution that can be distributed and installed. They are created by exporting an unmanaged solution by setting restrictions to prevent any further customizations. The whole point of Managed is locking down the Component states so they cannot be edited. Deleting the Managed Solution will remove all its customisations as well as

data contained. Managed Solutions become read only once deployed so they cannot be manipulated.
Step 3: Publish all changes.
Reference:
https://powerusers.microsoft.com/t5/Power-Apps-Pro-Dev-ISV/Managed-vs-Unmanaged/td-p/495685

NEW QUESTION: 48
You create the following apps for a company that provides financial guidance services: a model-driven app for financial advisers that work in the company's offices and a canvas app for remote financial advisers.
You need to create business rules for a custom counselling entity used by all financial advisers.
Who will be affected by the business rules?
To answer, drag the appropriate financial adviser types to the correct business rules. Each financial adviser type may be used once, more than once, or not at all. You may need to drag the split bat between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/create-component

NEW QUESTION: 51

You are designing an app for a bank. You plan to use the following entities in the app:

Entity	Comments
Clients	Clients are assigned to a branch office
Bank accounts	A client may have multiple bank accounts. A bank account may have multiple clients as bank account owners
Branch offices	Clients are assigned to a branch office
Employees	Each employee works at only one branch office

You need to configure the relationships between the entities.

Which relationship types should you use? To answer, drag the appropriate relationship types to the correct relationships. Each source may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

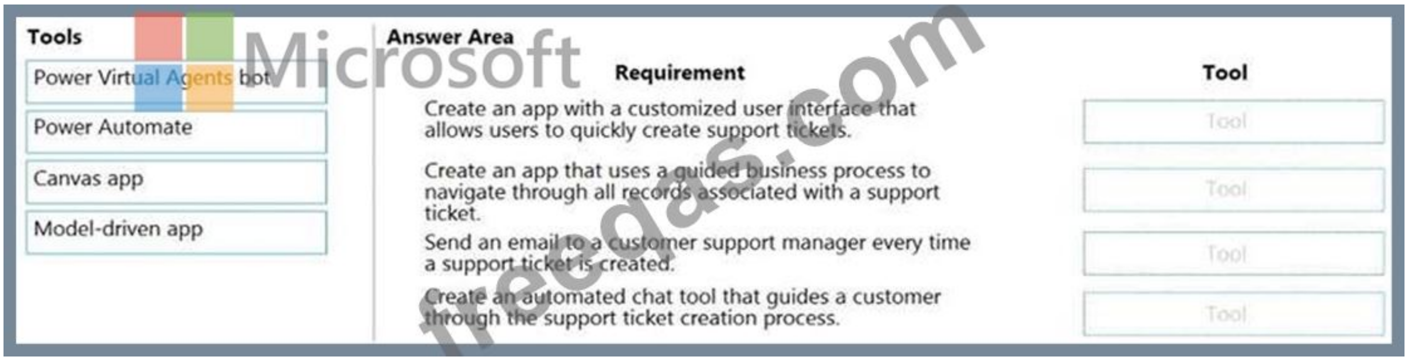
NEW QUESTION: 52

You plan to create apps for a company.

You need to identify the Power Platform tools required.

What should you use? To answer, drag the appropriate tools to the correct requirements. Each tool may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.



Answer:

NEW QUESTION: 53

A company creates a Power Apps app that allows service representatives to record information about on-site client visits. Service representatives perform a one-hour site visit with each client each quarter.

Service representatives use the app to perform the following activities:

View their scheduled visits for the day.

Record notes from service visits.

Schedule service technicians for issues uncovered during site visits.

Scan and upload service quote forms to a folder named Service Quote folder on Microsoft OneDrive once the customer has signed a service quote.

Service quotes that are over $10,000 are automatically sent to the service manager for review and approval.

Visits that are not closed at the end of the day are automatically moved to the following day unless it is the last day of the quarter. All client visits not performed for the quarter are escalated to the service manager for follow-up.

You need to create flows to meet the requirements.

Which type of flows should you use? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Reference:
https://docs.microsoft.com/en-us/power-automate/overview-adaptive-cards

NEW QUESTION: 54
You create a custom field on the Account entity.
Members of TeamA must have full access to the field. Members of TeamB must have no access to the field.
You need to configure security.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Add TeamA to the field security profile.	
Create a field security profile and set all the permissions for the custom attribute to **Yes**.	
Add TeamB to the field security profile.	
Create a field security profile and set all the permissions for the custom attribute to **No**.	
Enable field-level security for the field.	

Answer:

Actions	Answer Area
Add TeamA to the field security profile.	Enable field-level security for the field.
Create a field security profile and set all the permissions for the custom attribute to **Yes**.	Create a field security profile and set all the permissions for the custom attribute to **Yes**.
Add TeamB to the field security profile.	Add TeamA to the field security profile.
Create a field security profile and set all the permissions for the custom attribute to **No**.	
Enable field-level security for the field.	

NEW QUESTION: 55

You are creating an app for an organization's human resources (HR) department. You create an Employee entity in an unmanaged Common Data Service solution.

Another user creates the following Power Automate flows separately from the solution:

Flow	Description
FlowA	Send email to the HR manager when a new document is uploaded to Microsoft SharePoint.
FlowB	Send email to the HR manager after a user selects a document in Microsoft OneDrive for Business and runs the flow.
FlowC	Send email to the HR manager at 8 AM daily if new documents are uploaded in Microsoft OneDrive for Business since the previous day.
FlowD	Send email to the HR manager when a new employee record is added.

You need to incorporate the flows that can be added to the solution.

Which two flows can you include? Each correct selection presents a complete solution.

NOTE: Each correct selection is worth one point.

A. FlowA

B. FlowB

C. FlowC

D. FlowD

Answer: A,D (LEAVE A REPLY)

You can add any of these conditions to determine precisely when your flow is triggered.

https://docs.microsoft.com/en-us/power-automate/connection-cds-native

NEW QUESTION: 56

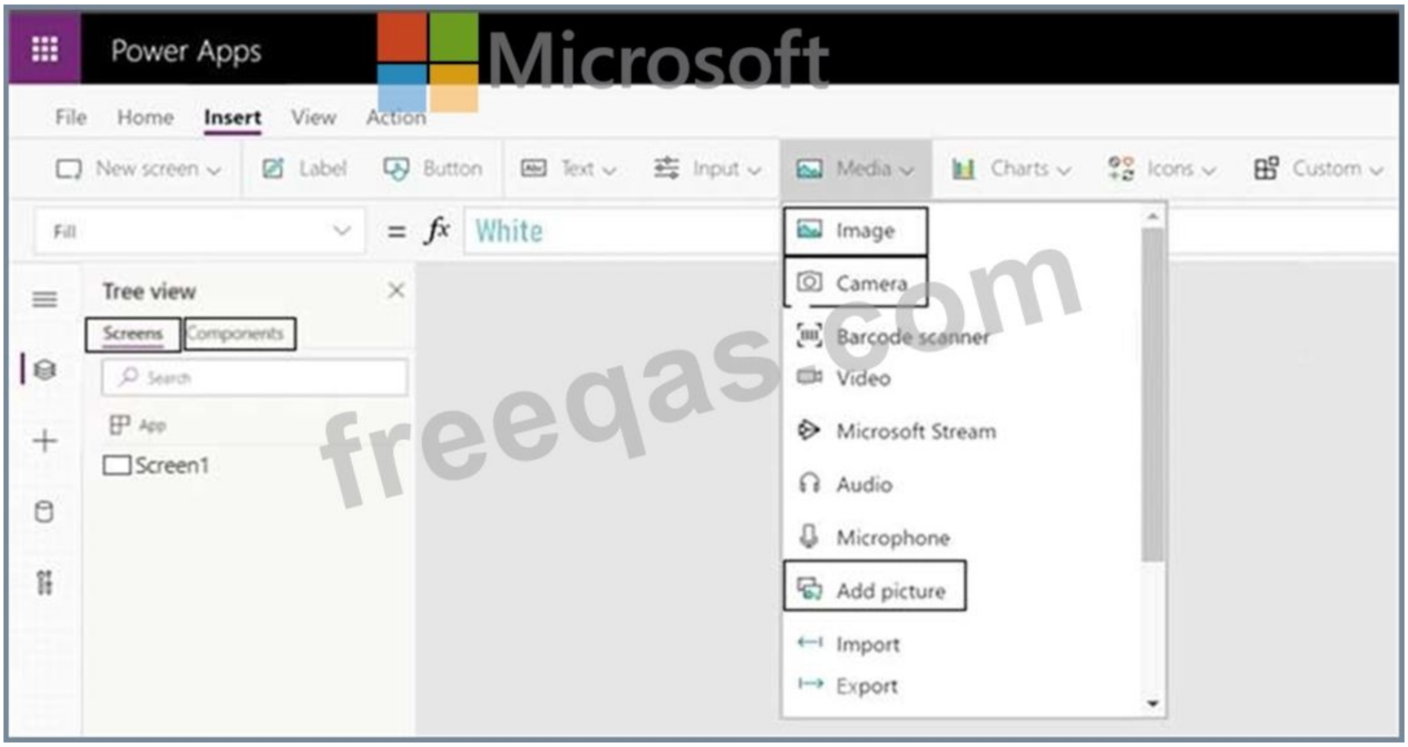
You are developing an app for a package delivery company. Delivery team members will use the app on their phones. Distribution center team members will use a web-based version of the app that runs on tablet devices.

When a delivery person arrives at a location and the package recipient is present, the app must capture the recipient's signature. If the recipient is not available, the app must capture a picture of the drop-off location or the person receiving the package.

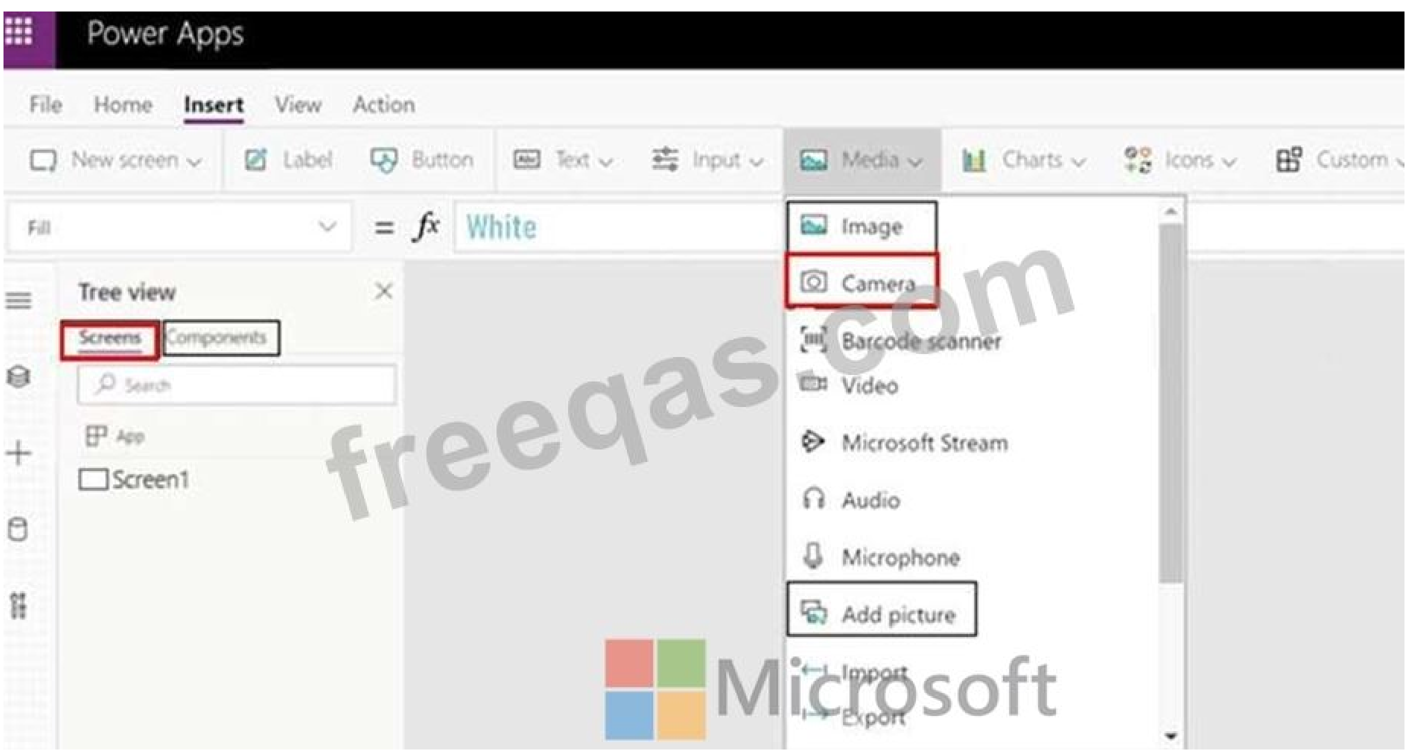
You need to design phone-based and web-based versions of the app.

Which app type and media control should you use? To answer, configure the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.



Answer:



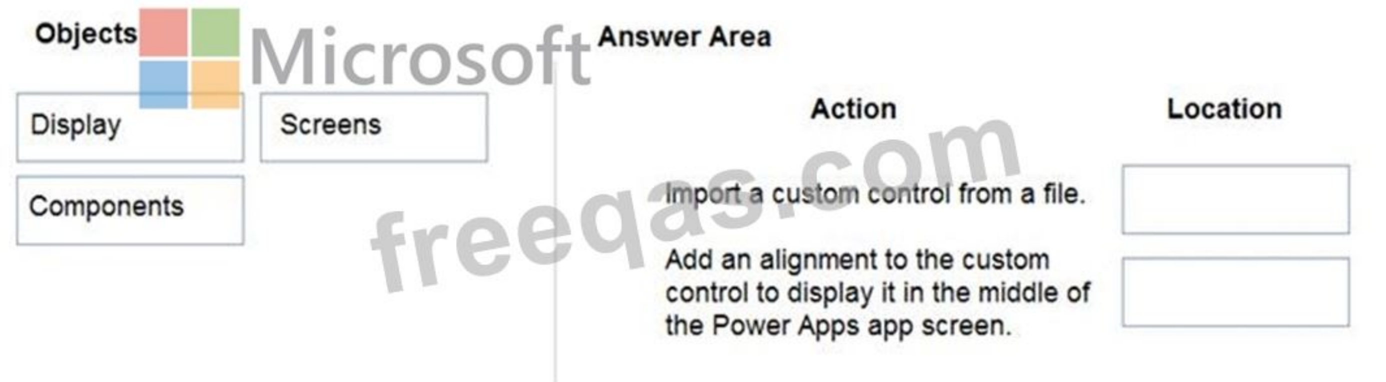
Reference:
https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/controls/control-camera

NEW QUESTION: 57

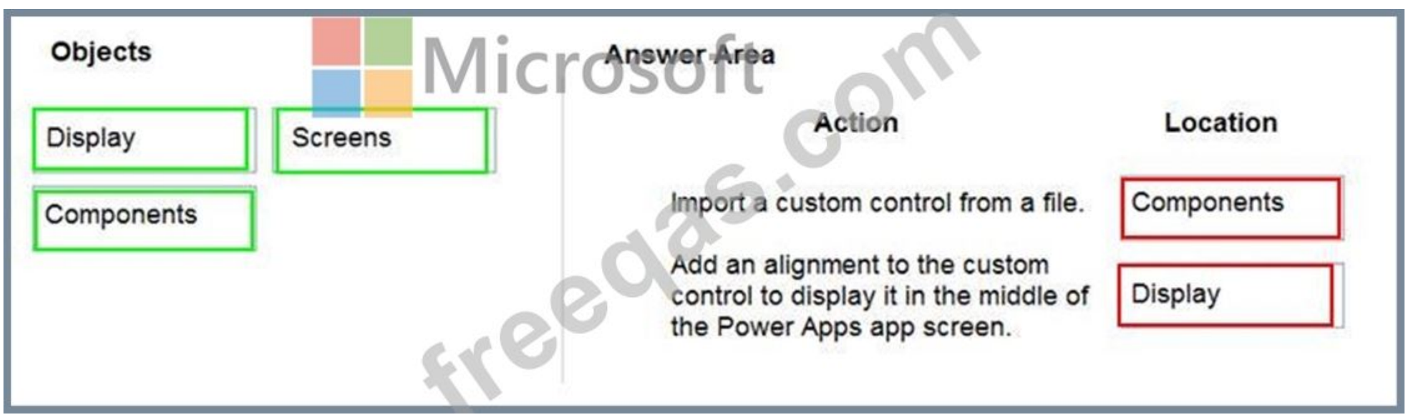
A company must use a Power Apps app custom control that is exported from a different canvas Power Apps app.

You need to insert the custom control into the Power Apps app.

Where should you complete the actions? To answer, drag the appropriate locations to the correct actions. Each location may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.



Answer:



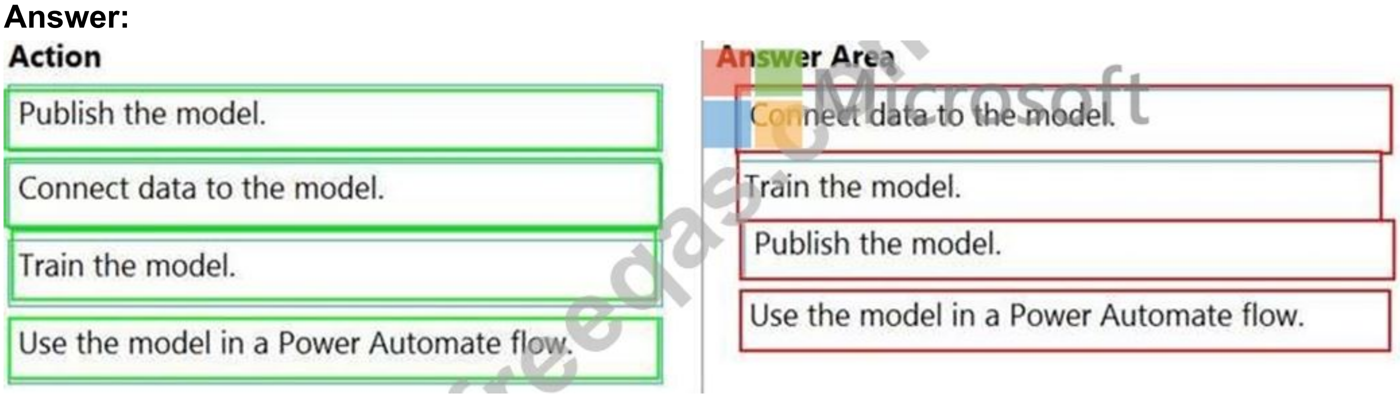
Reference:
https://docs.microsoft.com/en-us/powerapps/developer/component-framework/component-framework-for-canvas-apps

NEW QUESTION: 58
You create a canvas app.
A user is not able to determine which field currently has focus. You run App checker to identify errors.
You need to verify that the focused border thickness is set to a value greater than zero.
Which section of the App checker results should you check?
A. Rules
B. Performance
C. Accessibility
D. Runtime
Answer: C (LEAVE A REPLY)
The Accessibility checker classifies each issue as an error, a warning, or a tip based the issue's severity.
Issues include:
Focus isn't showing

When the FocusBorderThickness of a control is set to 0. It is good practice to ensure a proper color-contrast ratio between the focus border and the control itself so it's clearly visible.
Reference:
https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/accessibility-checker

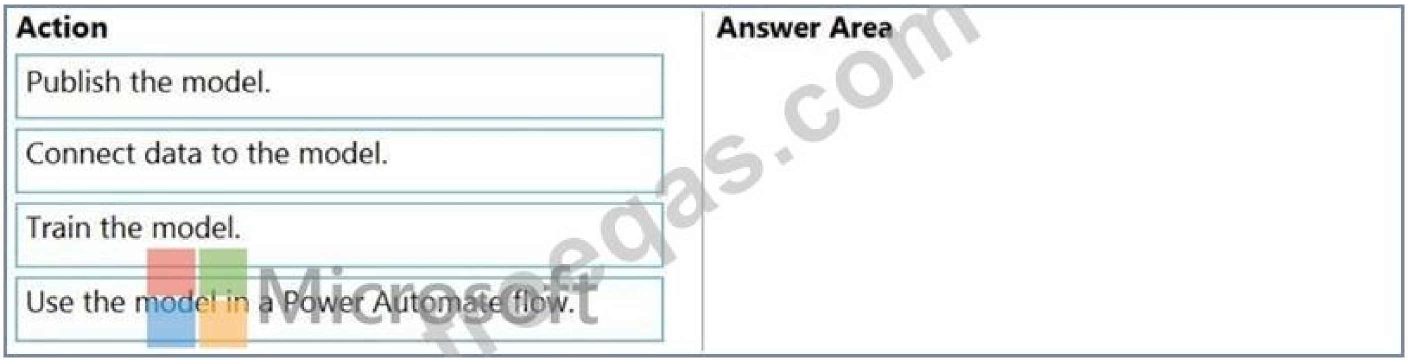
NEW QUESTION: 59
A company uses Power Automate and Power Apps to streamline business processes.
You need to use AI Builder to analyze customer reviews of the company's products.
In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

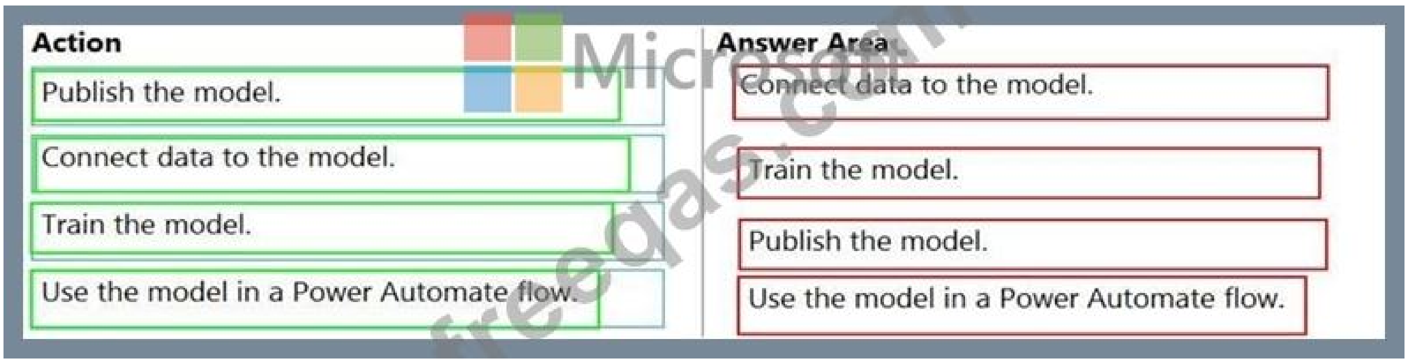


Reference:
https://powerapps.microsoft.com/en-us/blog/introducing-simplified-ai-builder-experience-in-power-automate/

NEW QUESTION: 60
A company uses Power Automate and Power Apps to streamline business processes.
You need to use AI Builder to analyze customer reviews of the company's products.
In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.



Answer:



Reference:
https://powerapps.microsoft.com/en-us/blog/introducing-simplified-ai-builder-experience-in-power-automate/

NEW QUESTION: 61

A company uses data loss prevention (DLP) policies. You have a Power Automate flow that posts Twitter mentions into a Microsoft SharePoint list.
You are not able to activate the flow.
You need to troubleshoot the issue.
What are two possible reasons why you cannot activate the flow? Each correct answer presents a complete solution.
NOTE: Each correct selection is worth one point.

A. You are not assigned the Power Platform Admin role.
B. You placed all connectors into the Business group within the DLP policy.
C. You placed all connectors into the Non-Business group within the DLP policy.
D. You are not assigned the Environment Admin role.

Answer: (SHOW ANSWER)

Reference:
https://docs.microsoft.com/en-us/power-platform/admin/wp-data-loss-prevention

NEW QUESTION: 62
You are an app maker.
You want to create apps and track customizations as part of the default solution.
You need to determine the impact of performing the work in the default solution.
What should you conclude?
A. The default solution does not contain all components and customizations from all solutions in the environment.
B. The prefix used when creating components as part of the default solution can be set to a specific value.
C. The default solution cannot be exported and distributed to another environment.
Answer: C (LEAVE A REPLY)
Default Solution. This is a special solution that contains all components in the system. The default solution is useful for discovering all the components and configurations in your system.
Why you shouldn't use the default solutions to manage customizations
There are a few reasons why you shouldn't create apps and make customizations in either of the default solutions:
* The default solution can't be exported; therefore, you can't distribute the default solution to another environment.
The default solution contains all components and customizations from all solutions in the environment.
By default, all enabled users can create apps and customize components in the Common Data Services Default Solution.
It's difficult to locate or identify the customizations you've made in the environment by using either default solution.
When you use either default solution to create components, you'll also use the default publisher assigned to the solution. This often results in the wrong publisher prefix being applied to some components.
Reference:
https://docs.microsoft.com/en-us/power-platform/alm/use-solutions-for-your-customizations

NEW QUESTION: 63
An administrator plans to create and deploy dashboards for use only by sales associates. The dashboards will display the current sales pipeline, open cases, recent major wins, and key opportunities by postal code.
Sales associates must be able to act on the specific data displayed in dashboards.
You need to create the dashboards.
Which type of dashboards should you create? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Reference:

https://docs.microsoft.com/en-us/powerapps/developer/model-driven-apps/create-dashboard

https://docs.microsoft.com/en-us/powerapps/maker/model-driven-apps/configure-interactive-experience-dashboards

NEW QUESTION: 64

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You build a canvas app for a manufacturing company. The company receives parts and materials from many vendors. You create a form to collect information from packing slips.

Receivers must be able to take a picture of packing slips to receive materials instead of manually entering data in the app.

You need to ensure that users can scan packing slip information into the form.

Proposed solution: Use a Key Phrase Extraction model.

Does the solution meet the goal?

A. Yes

B. No

Answer: B (LEAVE A REPLY)

The key phrase extraction prebuilt model identifies the main points in a text document.

Reference:

https://docs.microsoft.com/en-us/ai-builder/prebuilt-key-phrase

Design solutions

Testlet 2

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.
To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.
At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.
To start the case study
To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. When you are ready to answer a question, click the Question button to return to the question.
Background
Overview
Wide World Importers is an importer and supplier of fair trade, handmade home goods to independent retailers in North America. The company has a partner company named Tailwind Traders.
One of the products that the company manufactures was recently featured on several major television talk shows and has become very popular.
Wide World Importers is expanding their prospective sales operations to new markets and plans to engage current customers in a more direct manner.
Current environment
Sales representatives submit weekly status reports to regional managers. There is no standardized format for these status reports. The process for managing status reports is challenging.
Wide World Importers has decided to use Microsoft 365, Microsoft Azure, and Power Platform for future app development. Both Wide World Importers and Tailwind Traders have identical Microsoft SharePoint and Azure configurations. Both companies use separate tenants.
Requirements
Application
You must create a mobile app to streamline the creation of status reports by sales representatives. You must make the same app available to Tailwind Traders. The mobile app must meet the following requirements:
* Minimize the use of code.
* Use formulas and expressions when necessary.
* Support a variety of visual layouts.

* Use a SharePoint list to store information about regional managers and sales representatives.
* Use Azure SQL Database to store other data.

Status reports

* Sales representatives must provide a weekly status report for all work processes each Monday.
* Representatives must enter the following information for each process:

Information type	Values
Category	Pipelines, Work/life balance, Coaching/Mentoring, or Communications
Status	At Risk, Acceptable, or Great
Notes	Notes as appropriate

* If a sales representative submits a status report and assigns the At Risk status to a process, the app must prompt the sales representative to enter a detailed description for the risk. This information must be emailed to the regional manager. If the category is Work/life balance, the information must be carbon copied to the human resources department.
* If a sales representative does not submit a weekly status report by an agreed upon deadline, the system must send an email to remind the sales representative.
* The app must be able to run both online and offline. If the mobile device on which the app runs is connected to the internet, the app must immediately submit the status report.
* You must display a visual indicator in the app so that sales representatives know whether the app is offline before submitting reports.
* When data is submitted offline, the data must be stored in the app until the app is back online.

Technical

Regardless of the UI layouts, the data recorded must be standardized in the Azure DB tables.

You must use global variables in the app.

Deployment

* Before deploying the app to production, you must ensure that the app conforms to Microsoft accessibility and performance guidelines.
* The completed app and all supporting components must be provided to Tailwind Traders.
* Tailwind Traders must not be able to make changes to any of the components.
* You must use the following version control numbering scheme:

Major: The last two digits of the year the app is packaged

Minor: Two digits that represent the month when the app is packaged

Build: A number that is incremented to represent significant changes to the app Revision: The incremented revision for a package

* New versions of the application must completely replace previous versions of the app.
* When identifying versions of the app solution, all dependencies, entities, and user interfaces components must be identified to avoid any unintentional issues caused by reverting individual components to a previous version.
* Previous versions of the mobile app must be available for roll back purposes.
* All versions of software that have been used in production must be retained for five years.

Issues

The mobile app has been live for several months. Eight versions of the app have been released since the initial version of the app was deployed to sales representatives. You must revert the app to an earlier version and redesign some features.

User1 often works in a warehouse that does not have internet connectivity. User1 needs to edit an existing status report and submit a new status report.

Several sales representatives have accessibility restrictions. User2 is visually impaired and cannot see images.

User3 is unable to use a mouse.

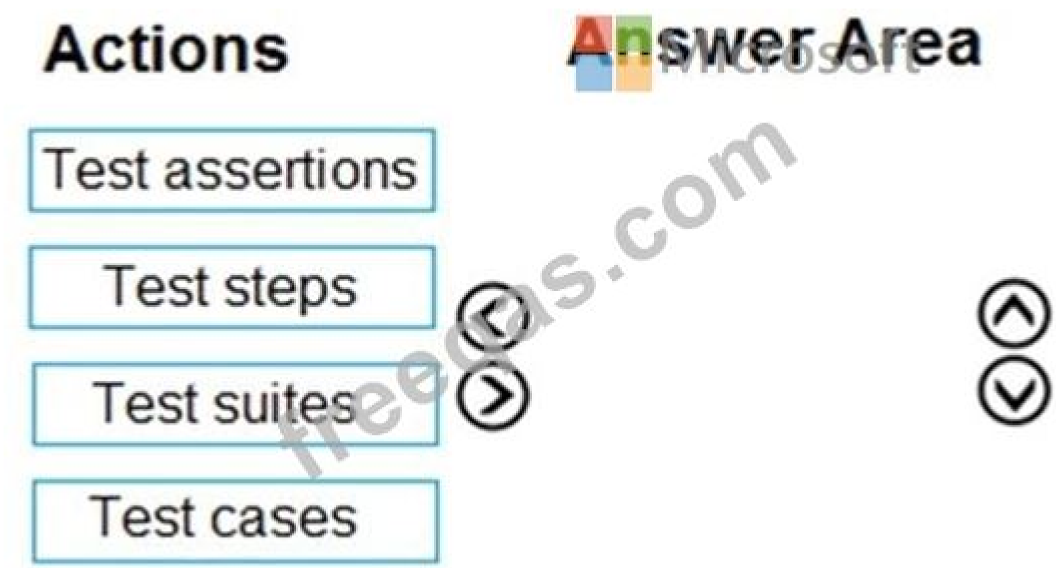
NEW QUESTION: 65

You have a canvas app that uses multiple inputs for calculations.

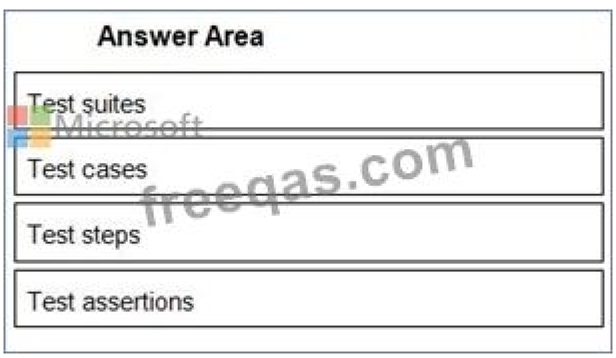
You must use Test Studio to create automated tests and confirm that the app works as expected.

You need to organize your test scenarios into a hierarchy.

In which order should you create the objects? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.



Answer:



1 - Test suites
2 - Test cases
3 - Test steps
4 - Test assertions
Reference:
https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/working-with-test-studio

NEW QUESTION: 66
You need to store a list of products and their colors. You have a Power Apps app that includes the following elements:
a text box for the product name
a drop-down list for the product color
a button to add a product to the list
a status message that shows whether the addition of a product to the list was successful The button uses the following formula:

```
Collect(
colProductList,
{
 Product: txtProductName.Text, Color: drpColors.Selected.Value
}
);
Set(
 vStatusMessage, "Added '" & txtProductName.Text & "'"
);
timStatusMessage.Start;
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Statements	Yes	No
You must explicitly declare the collection before you can add product names and colors to the collection.	○	○
The formula stores the product name and the color in a collection.	○	○
`vStatusMessage` is a context variable that is used to store the status message.	○	○

Answer:

Statements	Yes	No
You must explicitly declare the collection before you can add product names and colors to the collection.	○	$\boxed{\bigcirc}$
The formula stores the product name and the color in a collection.	$\boxed{\bigcirc}$	○
`vStatusMessage` is a context variable that is used to store the status message.	○	$\boxed{\bigcirc}$

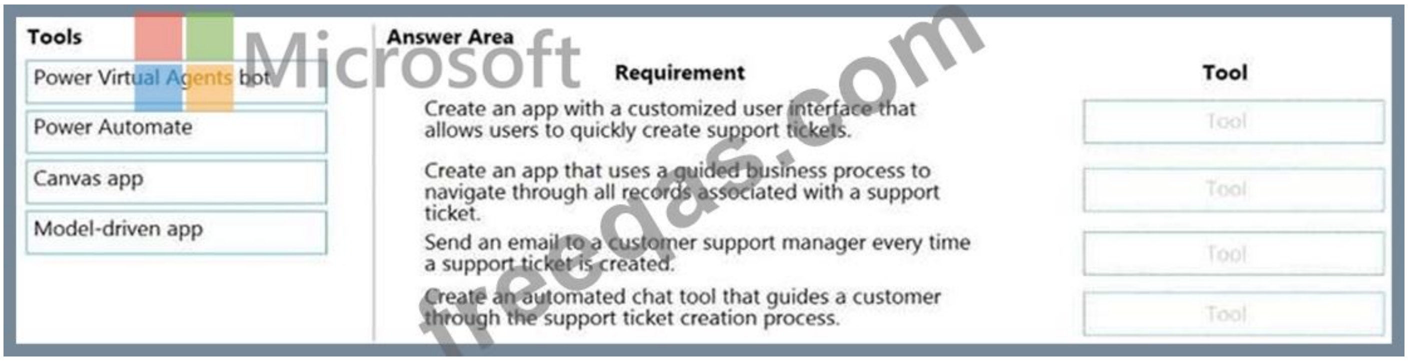
NEW QUESTION: 67
You plan to create apps for a company.
You need to identify the Power Platform tools required.

What should you use? To answer, drag the appropriate tools to the correct requirements. Each tool may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.



Answer:

Reference:
https://docs.microsoft.com/en-us/power-virtual-agents/authoring-fundamentals
https://docs.microsoft.com/en-us/power-automate

NEW QUESTION: 68
DRAG DROP
You plan to create apps for a company.
You need to identify the Power Platform tools required.
What should you use? To answer, drag the appropriate tools to the correct requirements. Each tool may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.
Select and Place:

Answer:

Explanation
Explanation:
Box 1: Canvas App
Box 2: Model-driven app
Model-driven app design is a component-focused approach to app development. Model-driven app design doesn't require code and the apps you make can be simple or very complex. Unlike canvas app development where the designer has complete control over app layout, with model-driven apps much of the layout is determined for you and largely designated by the components you add to the app.
Box 3: Power Automate
Power Automate is a service that helps you create automated workflows between your favorite apps and services to synchronize files, get notifications, collect data, and more.
Box 4: Power Virtual Agents bot
When you create bots with Power Virtual Agents, you author and edit topics.
Topics are discrete conversation paths that, when used together within a single bot, allow for users to have a conversation with a bot that feels natural and flows appropriately.
Creating a bot with Power Virtual Agents is easy to do with the no-code authoring canvas, and there are a number of ways you can manage how topics interact, how you want the conversation to flow, and what it should feel like.
Reference:
https://docs.microsoft.com/en-us/power-virtual-agents/authoring-fundamentals
https://docs.microsoft.com/en-us/power-automate

NEW QUESTION: 69
You create a canvas app named Hardware Order that suggests computer hardware to customers.
A value must be entered for the EmployeeID field when creating a new order if the value in the OrderType field does not contain the prefix test.
You need to configure the business rule.
Which two actions should you perform? Each correct answer presents part of the complete solution.
NOTE: Each correct selection is worth one point.
A. Set the scope of the business rule to Entity.
B. Add a Recommendation action and configure it to enter the order type.

C. Set the scope of the business rule to All Forms.
D. Use the following condition expression:
(OrderType Does not begin with [test]) AND (Modified By Does not contain data)
Answer: (SHOW ANSWER)
A: If you're building a Canvas app, you must use Entity as the scope.
D: A business rule needs a condition.
Reference:
https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/data-platform-create-business-rule

NEW QUESTION: 70
You need to roll back the mobile app to an earlier version.
What should you do? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Requirement	Action
Identify the currently published version and view version notes.	View the session details page for the app in Power Apps Studio. View environment details for the app in the Power Admin portal. View details for the app in the Power Apps Maker portal.
Revert to an earlier version of the app.	Select Restore on the previous version of the app. Export the previous version of the app and import as a new version. Delete versions of the app until the desired version is the most recent.

Answer:

Requirement	Action
Identify the currently published version and view version notes.	View the session details page for the app in Power Apps Studio. View environment details for the app in the Power Admin portal. View details for the app in the Power Apps Maker portal.
Revert to an earlier version of the app.	Select Restore on the previous version of the app. Export the previous version of the app and import as a new version. Delete versions of the app until the desired version is the most recent.

NEW QUESTION: 71
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You are creating a canvas app.
You need to automatically detect bicycles in pictures taken with the camera.
Proposed solution:
Create a Prediction custom model in AI Builder.

Train the model with pictures of bicycles and then publish the trained model.
Add the Object Detector control to your canvas app.
Does the solution meet the goal?

A. Yes

B. No

Answer: B (LEAVE A REPLY)

Instead create an Object Detection custom model

Note: AI Builder prediction models analyze patterns in historical data that you provide. Prediction models learn to associate those patterns with outcomes. Then, we use the power of AI to detect learned patterns in new data, and use them to predict future outcomes.

Reference:

https://docs.microsoft.com/en-us/ai-builder/prediction-overview

NEW QUESTION: 72

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are creating a canvas app that displays a list of accounts.

Users must be able to select an account and view details for the account. The app must include a feature that brings the user back to the list of accounts.

You add a blank screen named Screen_Accounts and add a gallery named Gallery_Accounts to the screen. You set the data source of Gallery_Accounts to Accounts and add another blank screen named Screen_AccountDetail.

You need to complete the app.

Solution:

Add an edit form to Screen_AccountDetail and set the Default Mode of the form to New Set the OnSelect property of Gallery_Accounts to Navigate(Screen_AccountDetail).

Set the data source of the form to Accounts.

Set the Item property of the form to Selected.

Add a back icon on Screen_AccountDetail and set its OnSelect property to Navigate(Screen_Accounts).

Does the solution meet the goal?

A. Yes

B. No

Answer: (SHOW ANSWER)

FormMode.New: the form is populated with default values and the user can modify the values of the fields. Once complete, the user can add the record to the data source.

Reference:

https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/functions/function-form

NEW QUESTION: 73

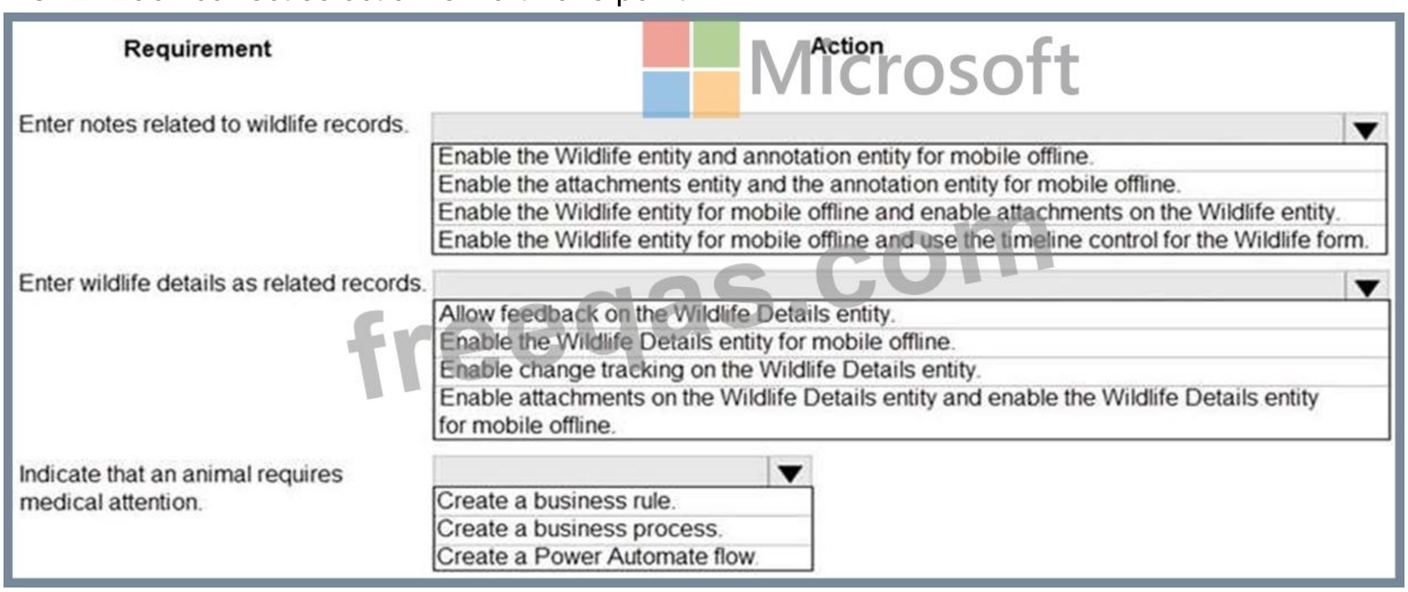
Rangers in national parks report wildlife they encounter during patrols. The rangers record observations in a notebook when they are on patrol. The rangers manually enter observation data when they are in the office. You are designing an app that allows rangers to record their observations while they are on patrol.

The wildlife is modeled as a custom table named Wildlife. The model has relationships to the annotation entity and to a custom entity named Wildlife Details. In the Wildlife Details entity, rangers capture more information as they observe an animal's habitat. When observing wildlife, rangers must indicate whether an animal requires medical attention. The app must synchronize and save data to Common Data Service when connectivity is available.

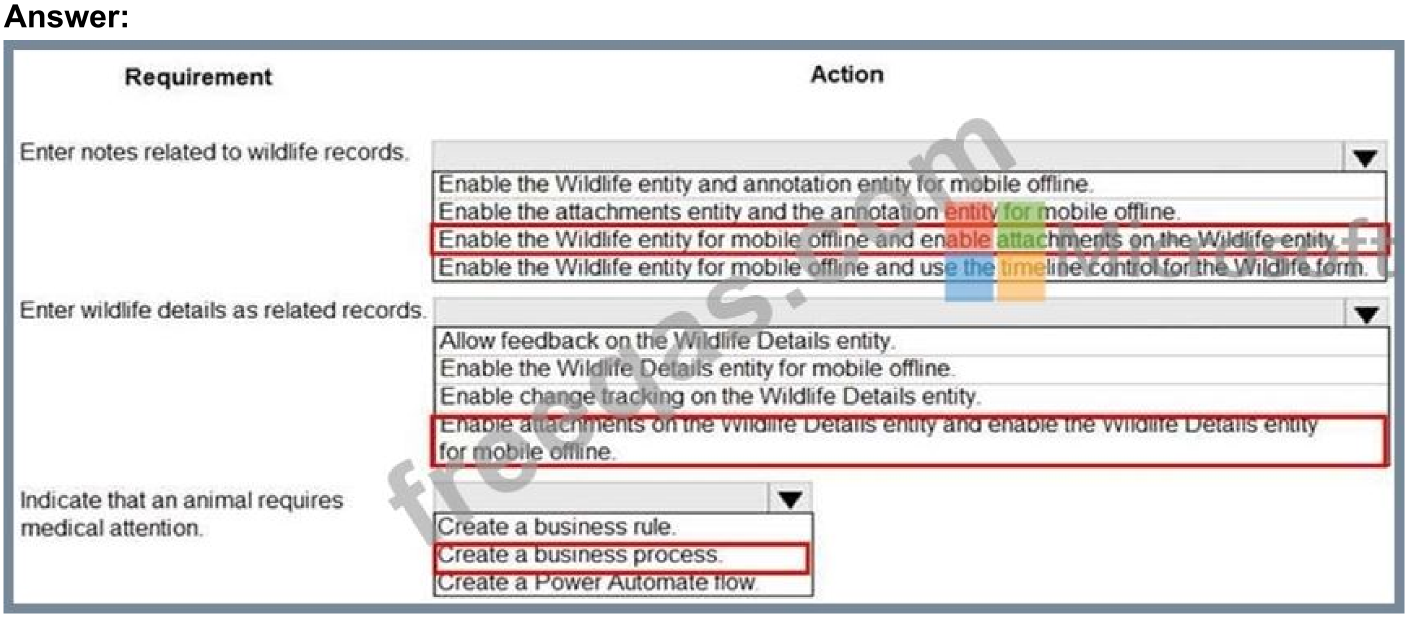
You need to design the app.

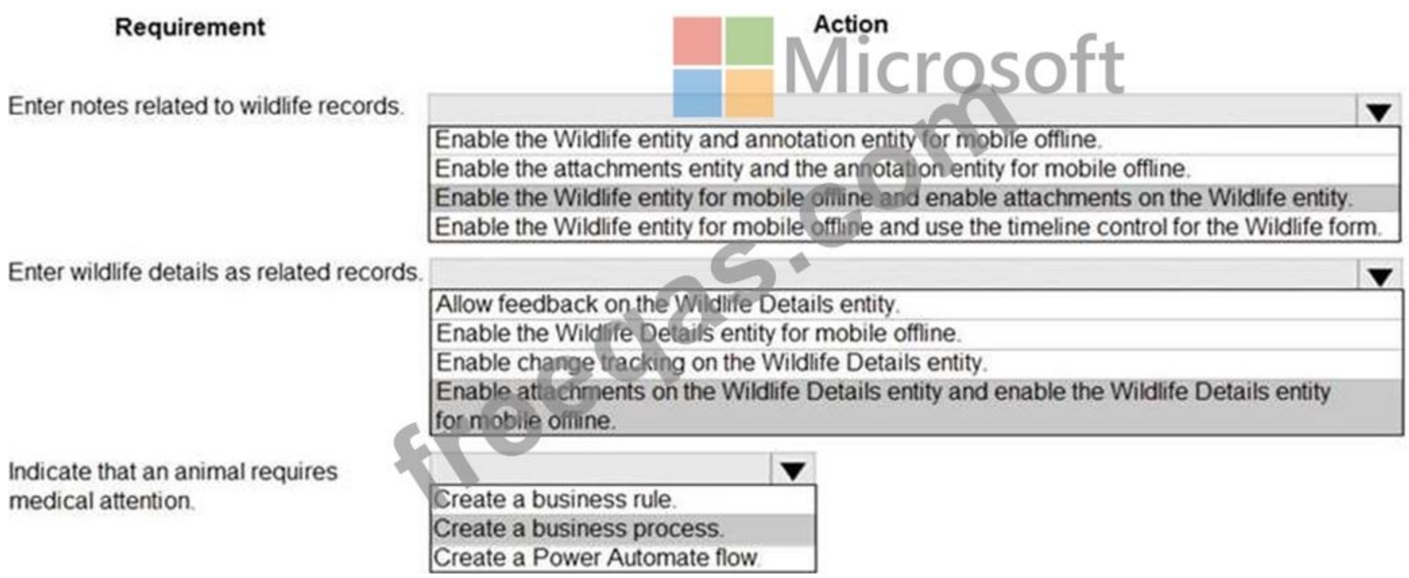
What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.



Answer:





Reference:
https://powerapps.microsoft.com/en-us/blog/mobile-offline-for-power-apps/
https://docs.microsoft.com/en-us/powerapps/maker/model-driven-apps/guide-staff-through-common-tasks-processes

NEW QUESTION: 74

A production line app maker at a manufacturing company creates a canvas app that looks for available inventory in a SQL database. The production line workers use the inventory app across all work centers.

The production line workers report the following app issues from the shop floor:

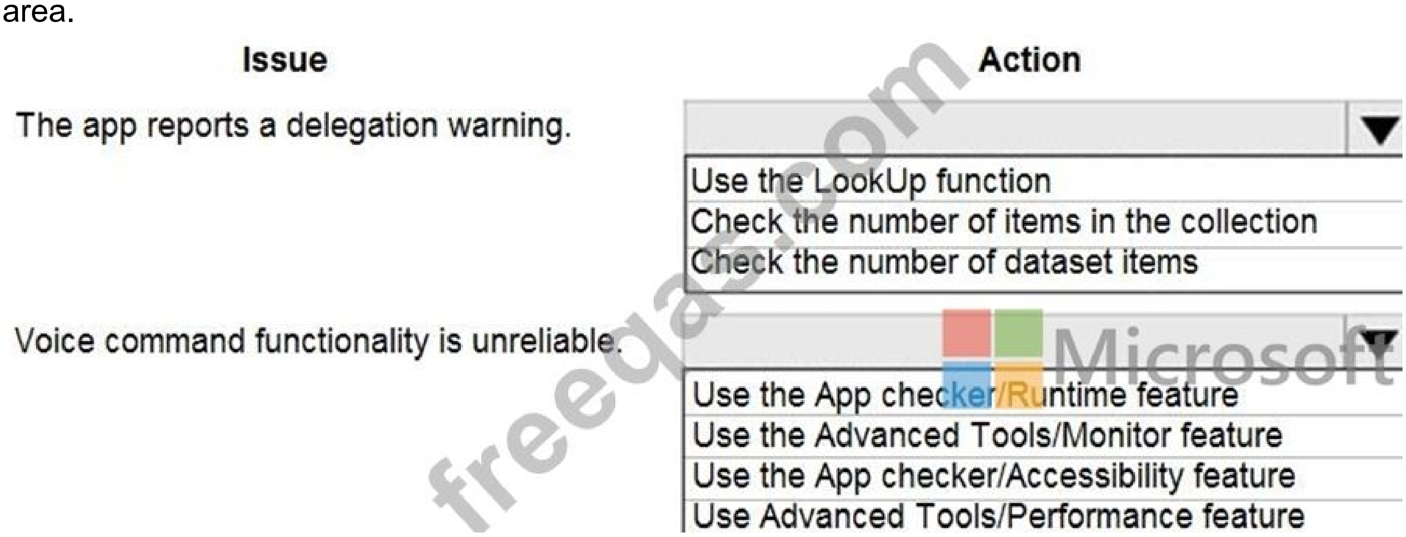
The app reports a delegation warning.

Voice command functionality is unreliable.

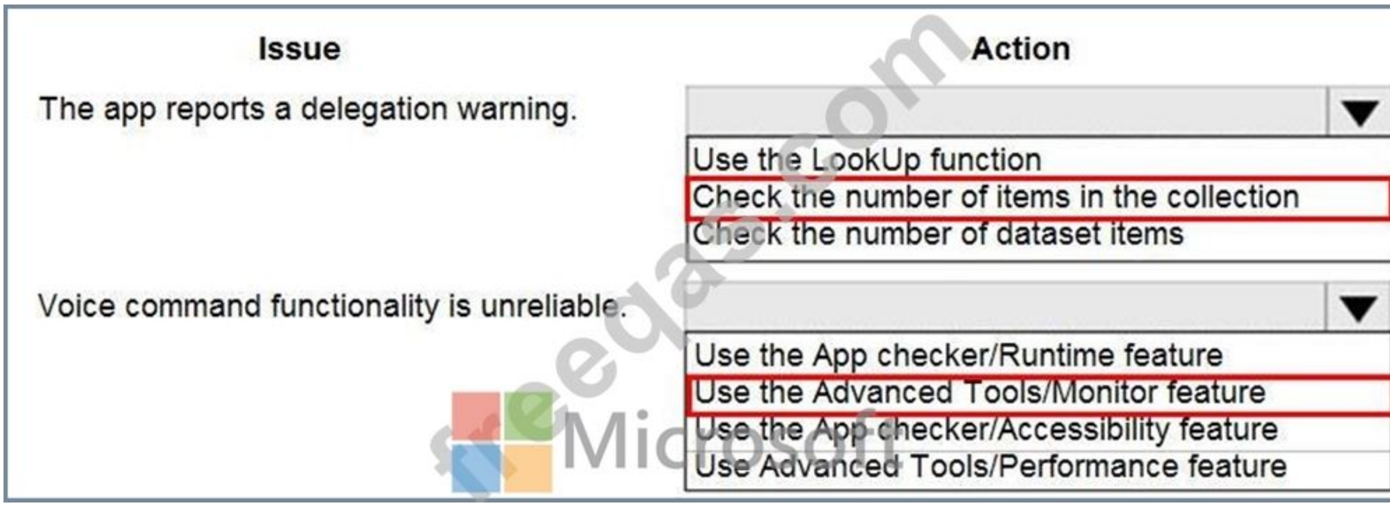
You have minimal information about the issues. You are not allowed to enter the production facility.

You need to troubleshoot the issues.

How should you troubleshoot the issues? To answer, select the appropriate options in the answer area.



Answer:



Reference:
https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/delegation-overview
https://docs.microsoft.com/en-us/powerapps/maker/monitor-canvasapps

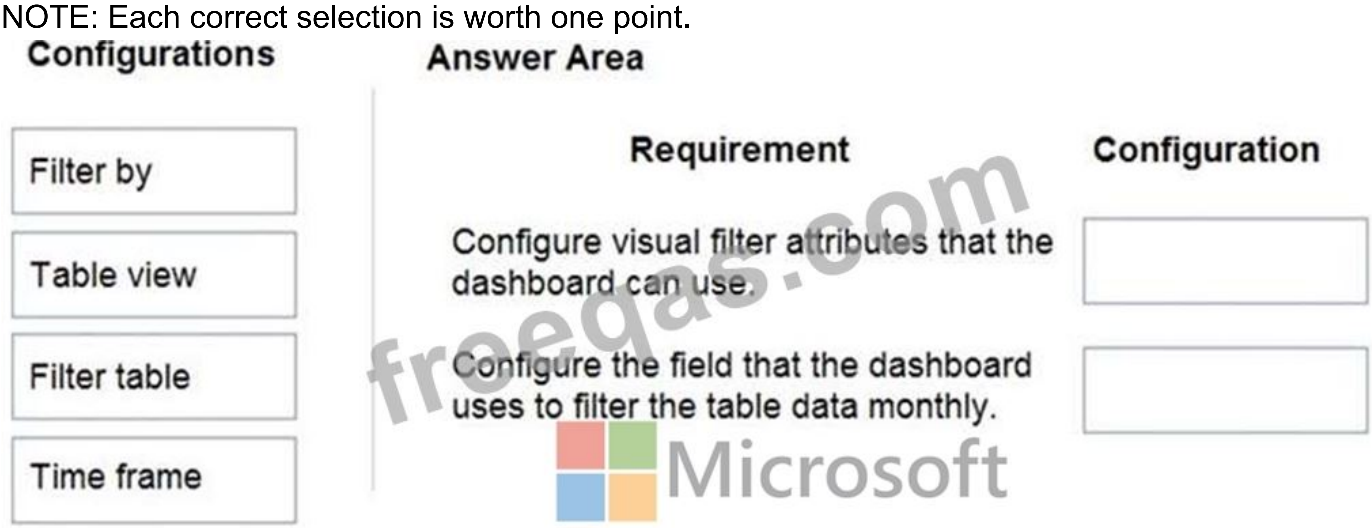
NEW QUESTION: 75
You create a canvas app for a store.
The logo must appear as the background image for the app. A loading spinner must display on the screen as the app loads.
You need to add the features to the app.
What should you modify? To answer, drag the appropriate form areas to the correct requests. Each form area may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

Answer:

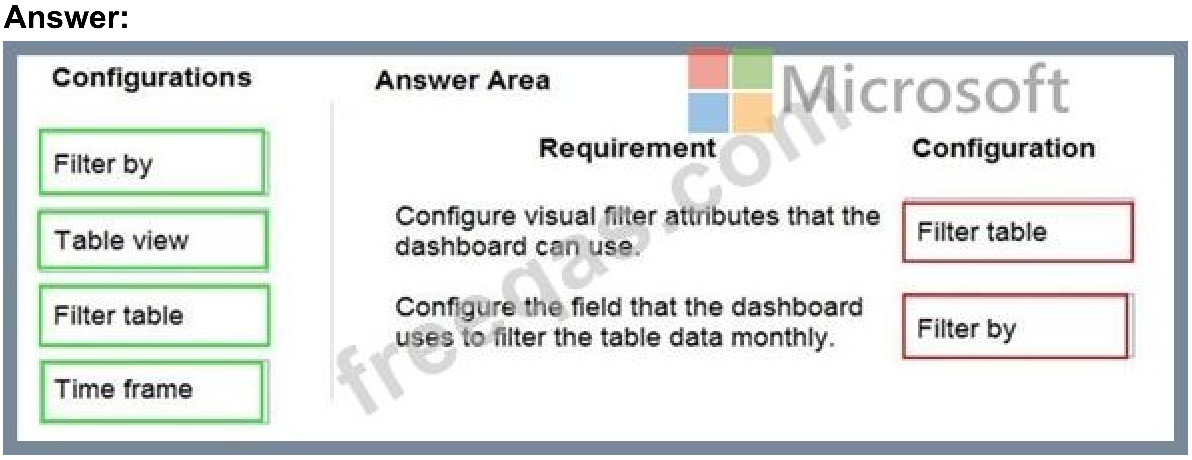
Reference:
https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/controls/properties-visual

https://arpitmscrmhunt.blogspot.com/2020/04/powerapps-display-loading-icon-until.html

NEW QUESTION: 76
The company is adding a multi-stream interactive dashboard to a model-driven app.
The company requires configuration of the dashboard to filter the table data based on modified accounts over the last month.
You need to configure the filters for the model-driven app dashboard.
Which configuration should you use? To answer, drag the appropriate locations to the correct requirements. Each configuration may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.



Answer:



Reference:
https://docs.microsoft.com/en-us/powerapps/maker/model-driven-apps/configure-interactive-experience-dashboards

NEW QUESTION: 77

A company has a Common Data Service custom entity that stores customer account data.
You need to create a relationship between the custom entity and the Account entity.
Which two tools can you use? Each correct answer presents a complete solution.
NOTE: Each correct selection is worth one point.

A. Power Platform Admin center
B. Power Apps solution explorer
C. Power Apps Maker portal
D. SQL Server Management Studio
E. Visual Studio Code

Answer: B,C (LEAVE A REPLY)

There are two designers you can use to create and edit 1:N (one-to-many) or N:1 (many-to-one) relationships:
* You can create and edit 1:N (one-to-many) or N:1 (many-to-one) entity relationships in Power Apps portal
* You can create and edit create and edit 1:N (one-to-many) or N:1 (many-to-one) entity relationships using solution explorer Reference:
https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/create-edit-1n-relationships

NEW QUESTION: 78

You complete work on a new canvas app in a development environment and add the app to a solution. You export the solution from the development environment and import the solution into a production environment.
After several days you notice that the background color for the canvas app in the production environment has changed from white to grey.
You need to determine why the background color changed.
What are two possible causes for the background color change? Each correct answer presents a complete solution.
NOTE: Each correct selection is worth one point.

A. You recently changed the Office 365 theme.
B. You exported a managed copy of the solution and imported the solution as an unmanaged solution. You modified the canvas app in the unmanaged solution.
C. You exported and imported an unmanaged copy of the solution and a co-worker modified the canvas app.
D. You chose a different theme from the Theme menu inside the canvas app.

Answer: A,C (LEAVE A REPLY)

A: You can create a custom look and feel (a theme), for your app by making changes to the default colors and visual elements provided in the uncustomized system.
C: Unmanaged Solution: The beginning state of solution is the unmanaged solution state. During this phase, you can add, edit, update, remove, delete, and test any of the components of the solution. You also have the ability to create restrictions on the components within the solution.
Note: Managed Solution: A managed solution is a finalized solution that can be distributed and installed. They are created by exporting an unmanaged solution by setting restrictions to prevent any further customizations. The whole point of Managed is locking down the Component states so they cannot be edited.
Reference:
https://powerusers.microsoft.com/t5/Power-Apps-Pro-Dev-ISV/Managed-vs-Unmanaged/td-p/495685
https://docs.microsoft.com/en-us/powerapps/maker/model-driven-apps/create-themes-organization-branding

NEW QUESTION: 79
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You are developing a model-driven app that uses a Common Data Service database. App users will have a variety of different security roles.
Development and testing must be performed using production dat
a. Multiple testers must be used at each testing stage.
You need to provision and configure new environments for development and testing.
Solution:
Provision a developer environment named D1 and a sandbox environment named S1.
Copy the production environment to both D1 and S1.
Use D1 for development and S1 for testing.
Does the solution meet the goal?
A. Yes
B. No
Answer: B (LEAVE A REPLY)
Production: This is intended to be used for permanent work in an organization.
Do not use production environment for testing.
Note: Instead use two sandboxed environments: one for development and one for testing.
Reference:
https://docs.microsoft.com/en-us/power-platform/admin/environments-overview

NEW QUESTION: 80

HOTSPOT

You need to configure the app to meet the requirements.

Which object properties should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Requirement	Property
Provide a visual indicator when the app is offline.	Visible OnSelect DisplayMode Fill
Store data when the app is offline.	OnSelect LoadData SubmitForm Now

Answer:

Answer Area

Requirement	Property
Provide a visual indicator when the app is offline.	Visible OnSelect DisplayMode Fill
Store data when the app is offline.	OnSelect LoadData SubmitForm Now

Explanation:

Box 1: Fill

Scenario: You must display a visual indicator in the app so that sales representatives know whether the app is offline before submitting reports.

Fill - The background color of a control.

Incorrect Answers:

DisplayMode - The mode to use for data cards and controls within the form control.

Box 2: SubmitForm

Scenario: When data is submitted offline, the data must be stored in the app until the app is back online.

Use the SubmitForm function in the OnSelect property of a Button control to save any changes in a Form control to the data source.

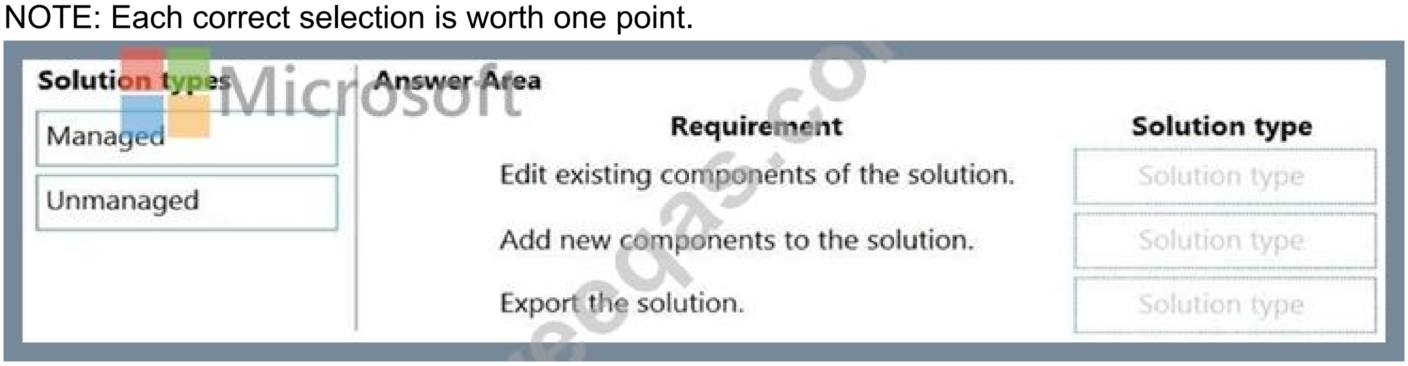
Reference:

https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/controls/control-screen

https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/functions/function-form
Implement and manage solutions Question Set 1

NEW QUESTION: 81
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You build a canvas app for a manufacturing company. The company receives parts and materials from many vendors. You create a form to collect information from packing slips.
Receivers must be able to take a picture of packing slips to receive materials instead of manually entering data in the app.
You need to ensure that users can scan packing slip information into the form.
Proposed solution: Use a Key Phrase Extraction model.
Does the solution meet the goal?
A. Yes
B. No
Answer: B (LEAVE A REPLY)
The key phrase extraction prebuilt model identifies the main points in a text document.
Reference:
https://docs.microsoft.com/en-us/ai-builder/prebuilt-key-phrase

NEW QUESTION: 82
You create multiple apps as part of an unmanaged solution.
You need to move the apps to another environment.
You need to pick the appropriate solution type for each requirement.
Which types of solutions should you create? To answer, drag the appropriate solution types to the correct requirements. Each solution type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.



Answer:

NEW QUESTION: 83

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You are creating a canvas app that displays a list of accounts.
Users must be able to select an account and view details for the account. The app must include a feature that brings the user back to the list of accounts.
You add a blank screen named Screen_Accounts and add a gallery named Gallery_Accounts to the screen.
You set the data source of Gallery_Accounts to Accounts and add another blank screen named Screen_AccountDetail.
You need to complete the app.
Solution:
* Add an edit form to Screen_AccountDetail and set the Default Mode of the form to View.
* Set the OnSelect property of Gallery_Accounts to Navigate(Screen_AccountDetail).
* Set the data source of the form to Accounts.
* Set the Item property of the form to Selected.
* Add a back icon on Screen_AccountDetail and set its OnSelect property to Navigate(Screen_Accounts).
Does the solution meet the goal?
A. Yes
B. No
Answer: A ([LEAVE A REPLY]())
View, edit, or create an item, save the contents, and reset the controls in an Edit form control.
FormMode.View: The form is populated with an existing record but the user cannot modify the values of the fields.
This function is often invoked from the OnSelect formula of a Button or Image control.
Reference:

https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/functions/function-form

NEW QUESTION: 84

HOTSPOT

You need to configure the system to meet the requirements.

What should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer:

Explanation:

Box 1: 1:N

Scenario: A sortable listing of all in-process jobs from the Job Setup table, by customer, start date, and product.

Box 2: User or Team owned

Scenario: Employees must only be able to access their own time tracking records from the app.

User or team: Data belongs to a user or a team. Actions that can be performed on these records can be controlled on a user level.

Reference:

https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/types-of-entities

NEW QUESTION: 85

A company creates a Power Apps app that allows service representatives to record information about on-site client visits. Service representatives perform a one-hour site visit with each client each quarter.
Service representatives use the app to perform the following activities:
View their scheduled visits for the day.
Record notes from service visits.
Schedule service technicians for issues uncovered during site visits.
Scan and upload service quote forms to a folder named Service Quote folder on Microsoft OneDrive once the customer has signed a service quote.
Service quotes that are over $10,000 are automatically sent to the service manager for review and approval.
Visits that are not closed at the end of the day are automatically moved to the following day unless it is the last day of the quarter. All client visits not performed for the quarter are escalated to the service manager for follow-up.
You need to create flows to meet the requirements.
Which type of flows should you use? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Reference:
https://docs.microsoft.com/en-us/power-automate/overview-adaptive-cards
https://docs.microsoft.com/en-us/power-automate/button-flow-with-user-input-tokens

NEW QUESTION: 86
A company is using Power Virtual Agents in Microsoft Teams to expose Microsoft Dataverse data to employees.
You create a chatbot that retrieves a list of customers by postal code from a Dataverse table. The chatbot will accept requests from a user and must connect to Dataverse to retrieve the data.
You need to connect the chatbot to the Dataverse table.
What should you use?
A. Table
B. Power Apps
C. Microsoft Teams
D. Power Virtual Agents
E. Power Automate
Answer: C (LEAVE A REPLY)
Dataverse for Teams is the "lite" version of Dataverse. It is a low-code platform designed to build relatively simple (but still powerful) apps, using a user-friendly interface and remaining within Microsoft Teams. This new update means that users now have the possibility to create Power Apps apps, Power Automate flows and Power Virtual Agents bots without leaving the Teams platform.
Reference:
https://docs.microsoft.com/en-us/learn/paths/work-power-platform-teams/

https://docs.microsoft.com/en-us/learn/modules/create-chatbot-power-virtual-agents-dataverse-teams/5-call-action-pull-data

NEW QUESTION: 87

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You build a canvas app for a manufacturing company. The company receives parts and materials from many vendors. You create a form to collect information from packing slips.
Receivers must be able to take a picture of packing slips to receive materials instead of manually entering data in the app.
You need to ensure that users can scan packing slip information into the form.
Proposed solution: Use a Category classification model.
Does the solution meet the goal?

A. Yes

B. No

Answer: (SHOW ANSWER)

A Category classification model categorizes text by its meaning.

Topic 1, Wide World Importers
Wide World Importers
This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.
To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.
At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.
To start the case study
To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. When you are ready to answer a question, click the Question button to return to the question.

Background

Current environment

Sales representatives submit weekly status reports to regional managers. There is no standardized format for these status reports. The process for managing status reports is challenging.

Wide World Importers has decided to use Microsoft 365, Microsoft Azure, and Power Platform for future app development. Both Wide World Importers and Tailwind Traders have identical Microsoft SharePoint and Azure configurations. Both companies use separate tenants.

Requirements

Application

You must create a mobile app to streamline the creation of status reports by sales representatives. You must make the same app available to Tailwind Traders. The mobile app must meet the following requirements:

* Minimize the use of code.
* Use formulas and expressions when necessary.
* Support a variety of visual layouts.
* Use a SharePoint list to store information about regional managers and sales representatives.
* Use Azure SQL Database to store other data.

Status reports

Sales representatives must provide a weekly status report for all work processes each Monday. Representatives must enter the following information for each process:

Information type	Values
Category	Pipelines, Work/life balance, Coaching/Mentoring, or Communications
Status	At Risk, Acceptable, or Great
Notes	Notes as appropriate

* If a sales representative submits a status report and assigns the At Risk status to a process, the app must prompt the sales representative to enter a detailed description for the risk. This

information must be emailed to the regional manager. If the category is Work/life balance, the information must be carbon copied to the human resources department.
* If a sales representative does not submit a weekly status report by an agreed upon deadline, the system must send an email to remind the sales representative.
* The app must be able to run both online and offline. If the mobile device on which the app runs is connected to the internet, the app must immediately submit the status report.
* You must display a visual indicator in the app so that sales representatives know whether the app is offline before submitting reports.
* When data is submitted offline, the data must be stored in the app until the app is back online.
Technical
Regardless of the UI layouts, the data recorded must be standardized in the Azure DB tables.
You must use global variables in the app.
Deployment
* Before deploying the app to production, you must ensure that the app conforms to Microsoft accessibility and performance guidelines.
* The completed app and all supporting components must be provided to Tailwind Traders.
* Tailwind Traders must not be able to make changes to any of the components.
* You must use the following version control numbering scheme:
* Major: The last two digits of the year the app is packaged
* Minor: Two digits that represent the month when the app is packaged
* Build: A number that is incremented to represent significant changes to the app
* Revision: The incremented revision for a package
* New versions of the application must completely replace previous versions of the app.
* When identifying versions of the app solution, all dependencies, entities, and user interfaces components must be identified to avoid any unintentional issues caused by reverting individual components to a previous version.
* Previous versions of the mobile app must be available for roll back purposes.
* All versions of software that have been used in production must be retained for five years.
Issues
The mobile app has been live for several months. Eight versions of the app have been released since the initial version of the app was deployed to sales representatives. You must revert the app to an earlier version and redesign some features.
User1 often works in a warehouse that does not have internet connectivity. User1 needs to edit an existing status report and submit a new status report.
Several sales representatives have accessibility restrictions. User2 is visually impaired and cannot see images. User3 is unable to use a mouse.

NEW QUESTION: 88

You are an app maker for a college. You create an app for student enrollment. The app captures the education level of the applicants.

The education level at the time of enrollment is an option set is in the student entity. The entity includes three levels:

High school

College

Bachelor

You must split the College option into two option sets:

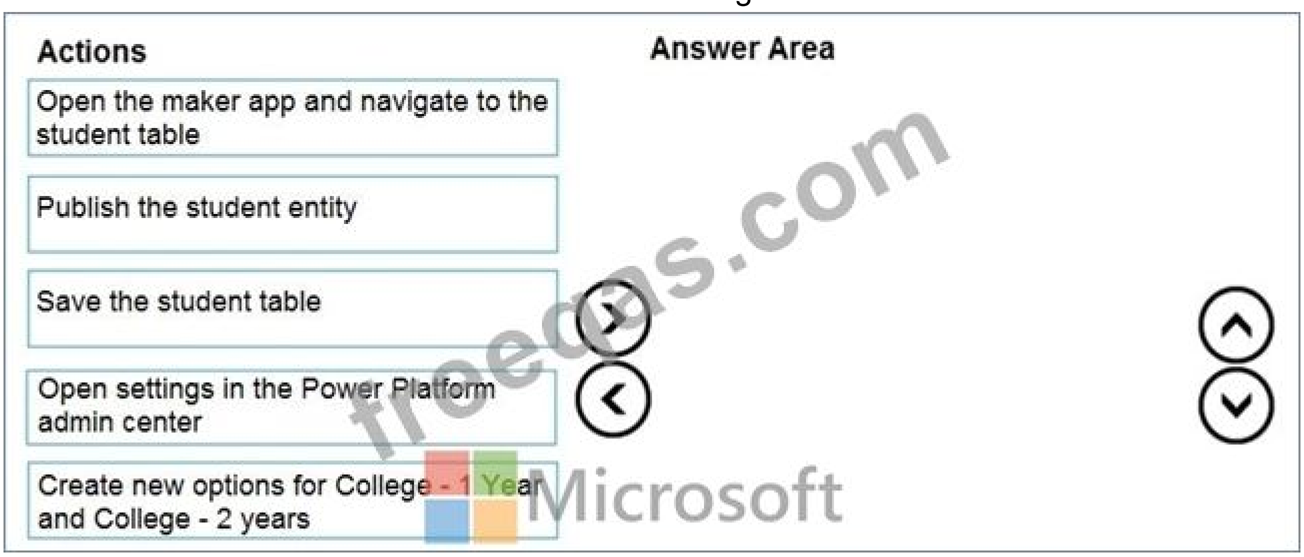
College - 1 Year

College - 2 years

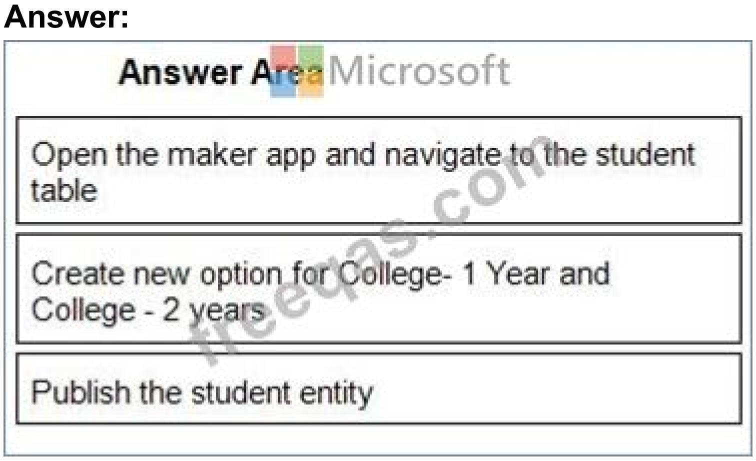
The split must not impact existing data.

You need to create the two option sets.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.



Answer:



1 - Open the maker app and navigate to the student table

2 - Create new option for College- 1 Year and College - 2 years

3 - Publish the student entity

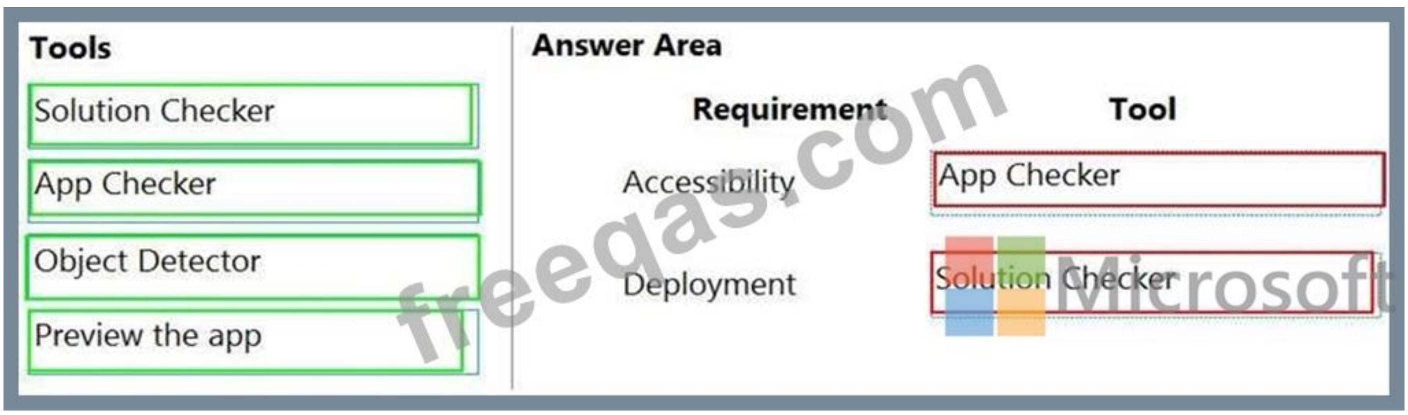
NEW QUESTION: 89

You need to ensure that the app can support the needs of User2 and User3, and meets the production deployment requirements.

Which tools should you use? To answer, select the appropriate tool in the answer area.

NOTE: Each correct selection is worth one point.

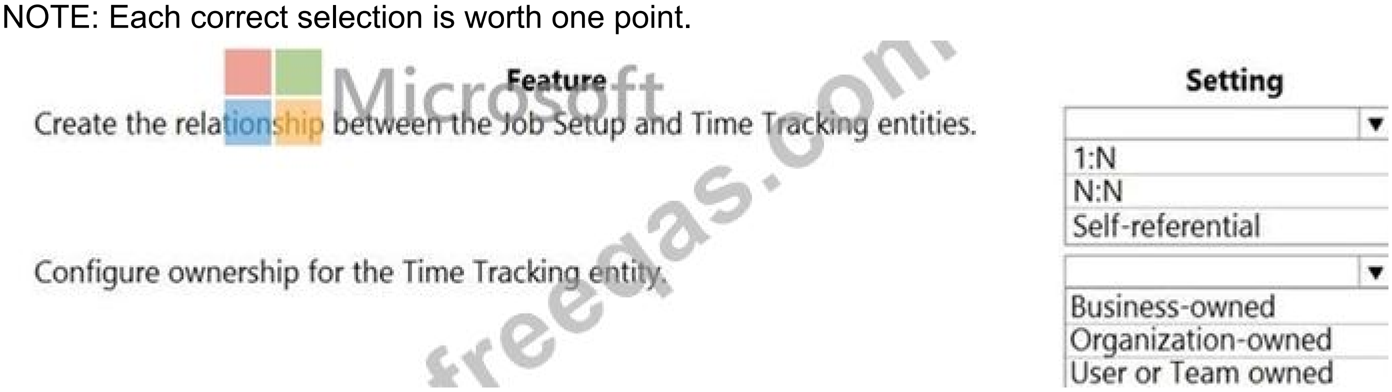
Answer:



Reference:
https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/accessibility-checker
https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/use-powerapps-checker

NEW QUESTION: 90

You need to configure the system to meet the requirements.
What should you use? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.



Answer:

Feature	Setting
Create the relationship between the Job Setup and Time Tracking entities.	1:N N:N Self-referential
Configure ownership for the Time Tracking entity.	Business-owned Organization-owned User or Team owned

Reference:
https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/types-of-entities

NEW QUESTION: 91

A company is building a Power Apps app to track key project tasks.

Users assign three tasks a risk status on a scale of 0 to 100 by using slider input controls named RiskStatus on the app. The highest risks use the risk status value of 100.

Task name	Slider input control name
Task1	RiskStatus1 [0–100]
Task2	RiskStatus2 [0–100]
Task3	RiskStatus3 [0–100]

If the combined value of all the tasks is 150 or above, a header bar on the screen must display the text HIGH RISK.

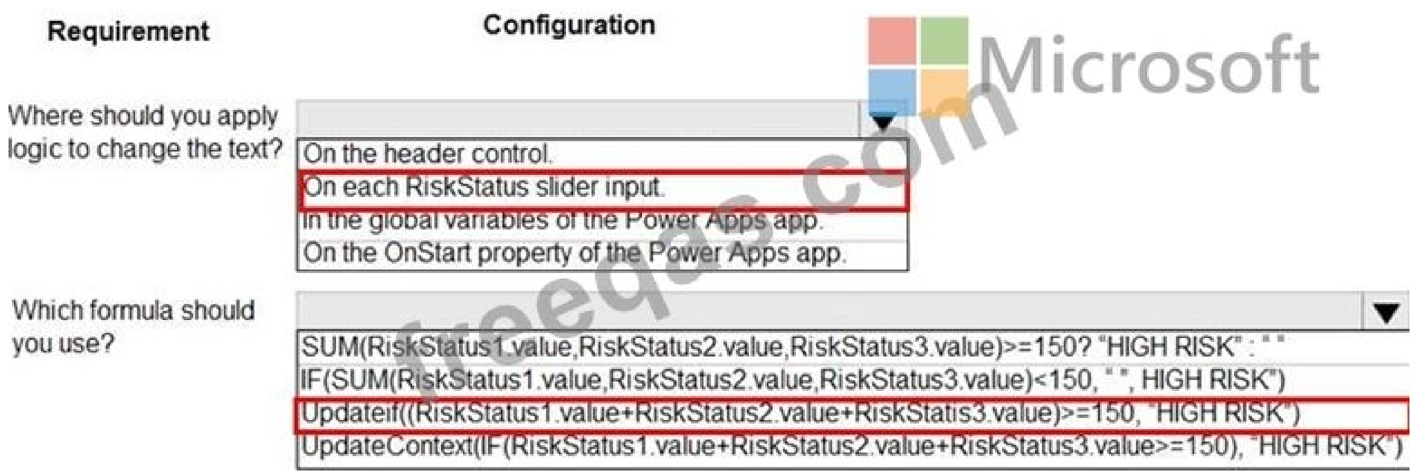
You need to configure a solution to change the text on the header bar.

How should you configure the app? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement	Configuration
Vhere should you apply ɔgic to change the text?	On the header control. On each RiskStatus slider input. In the global variables of the Power Apps app. On the OnStart property of the Power Apps app.
Vhich formula should 'ou use?	SUM(RiskStatus1.value,RiskStatus2.value,RiskStatus3.value)>=150? "HIGH RISK" : " " IF(SUM(RiskStatus1.value,RiskStatus2.value,RiskStatus3.value)<150, " ", HIGH RISK") Updateif((RiskStatus1.value+RiskStatus2.value+RiskStatis3.value)>=150, "HIGH RISK") UpdateContext(IF(RiskStatus1.value+RiskStatus2.value+RiskStatus3.value>=150), "HIGH RISK")

Answer:



Reference:
https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/working-with-formulas#change-a-value-based-on-input
https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/functions/function-update-updateif

NEW QUESTION: 92

A company has the following divisions: wholesale and retail.

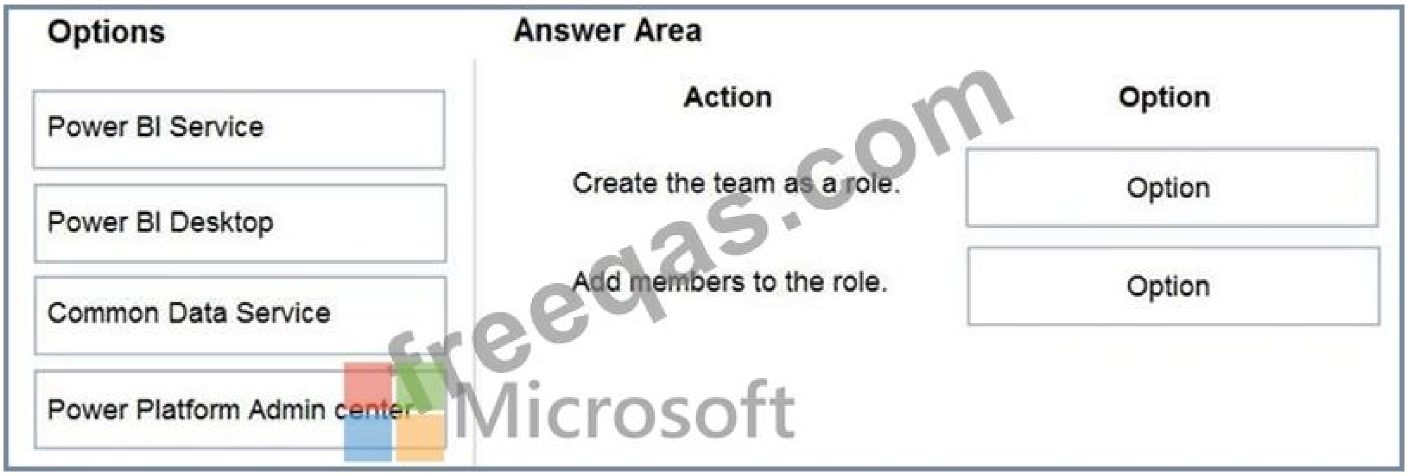
The manufacturer wants to create a single Power BI report to allow users to view data from a Microsoft SQL Server database.

You need to ensure that each user sees data only for the team to which the user is assigned.

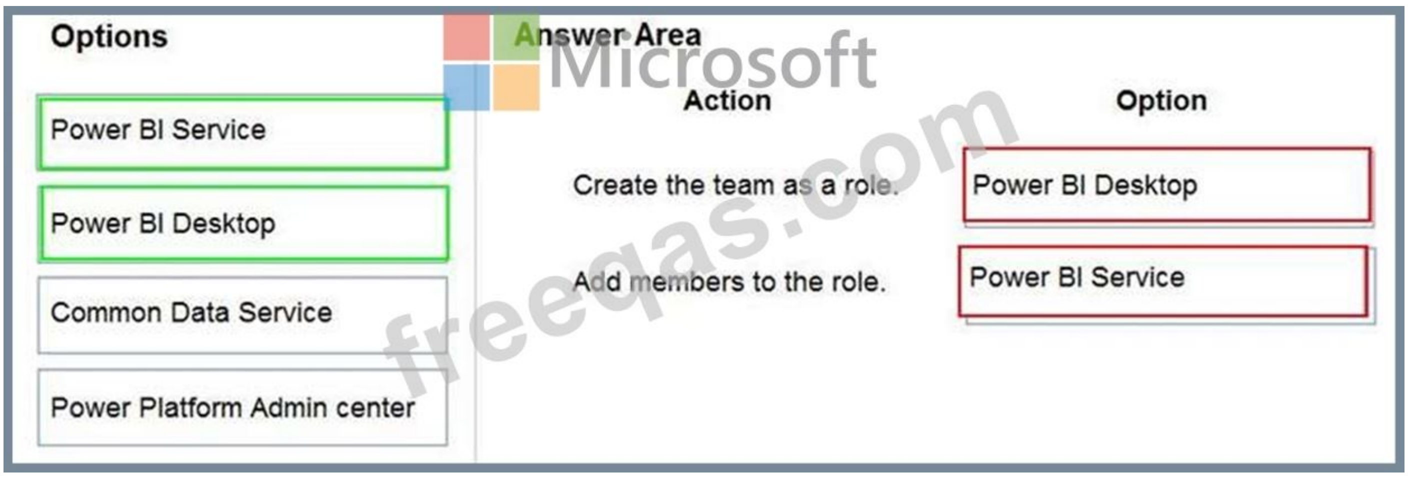
How should you secure the report?

To answer, drag the appropriate options to the correct action. Each option may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.



Answer:



Reference:
https://docs.microsoft.com/en-us/power-bi/create-reports/desktop-rls

NEW QUESTION: 93

The company is adding a multi-stream interactive dashboard to a model-driven app.

The company requires configuration of the dashboard to filter the table data based on modified accounts over the last month.

You need to configure the filters for the model-driven app dashboard.

Which configuration should you use? To answer, drag the appropriate locations to the correct requirements. Each configuration may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Configurations

- Filter by
- Table view
- Filter table
- Time frame

Answer Area

Requirement	Configuration
Configure visual filter attributes that the dashboard can use.	
Configure the field that the dashboard uses to filter the table data monthly.	

Answer:

Configurations

- Filter by
- Table view
- Filter table
- Time frame

Answer Area

Requirement	Configuration
Configure visual filter attributes that the dashboard can use.	Filter table
Configure the field that the dashboard uses to filter the table data monthly.	Filter by

Reference:
https://docs.microsoft.com/en-us/powerapps/maker/model-driven-apps/configure-interactive-experience-dashboards

NEW QUESTION: 94

You are designing an app for a bank. You plan to use the following entities in the app:

Entity	Comments
Clients	Clients are assigned to a branch office
Bank accounts	A client may have multiple bank accounts. A bank account may have multiple clients as bank account owners
Branch offices	Clients are assigned to a branch office
Employees	Each employee works at only one branch office

You need to configure the relationships between the entities.
Which relationship types should you use? To answer, drag the appropriate relationship types to the correct relationships. Each source may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

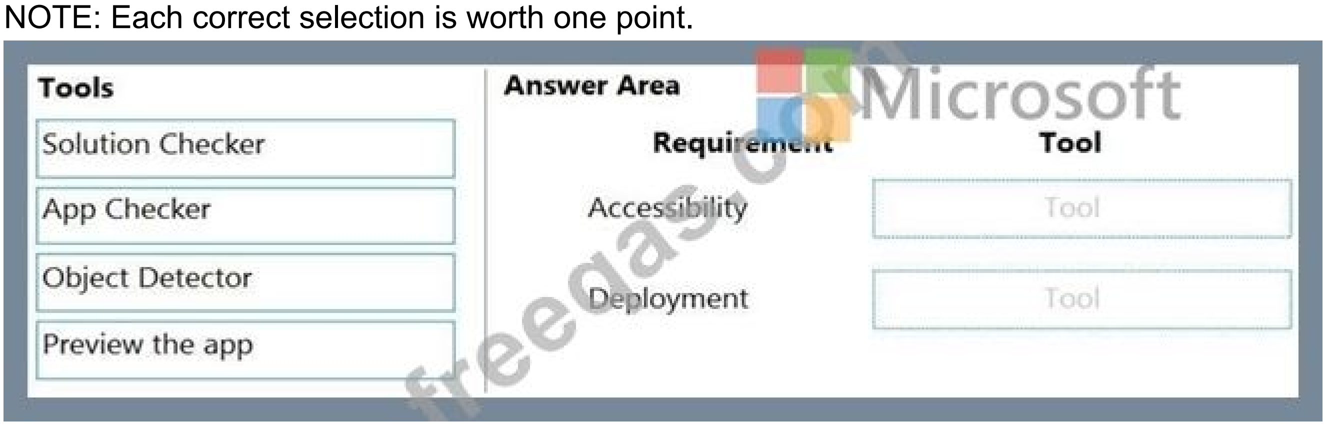
Answer:

NEW QUESTION: 95

You need to ensure that the app can support the needs of User2 and User3, and meets the production deployment requirements.

Which tools should you use? To answer, select the appropriate tool in the answer area.

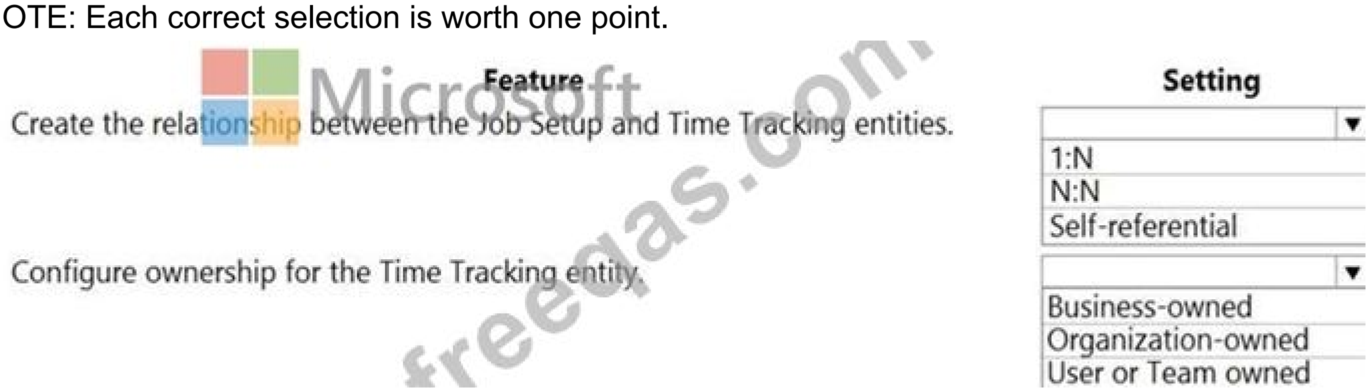
NOTE: Each correct selection is worth one point.



Answer:

Explanation:
Box 1: App Checker
Scenario: Several sales representatives have accessibility restrictions. User2 is visually impaired and cannot see images. User3 is unable to use a mouse.
Users who have vision, hearing, or other impairments can use your canvas app more easily and successfully if you consider accessibility as you design how the app looks and behaves. If you're not sure how to make your app more accessible, you can run the AppChecker Accessibility checker in Power Apps Studio.
Box 2: Solution Checker
Scenario: Before deploying the app to production, you must ensure that the app conforms to Microsoft accessibility and performance guidelines.
Use solution checker to validate your model-driven apps in Power Apps.
Reference:
https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/accessibility-checker
https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/use-powerapps-checker

NEW QUESTION: 96
You need to configure the system to meet the requirements.
What should you use? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.



Answer:

Reference:
https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/types-of-entities

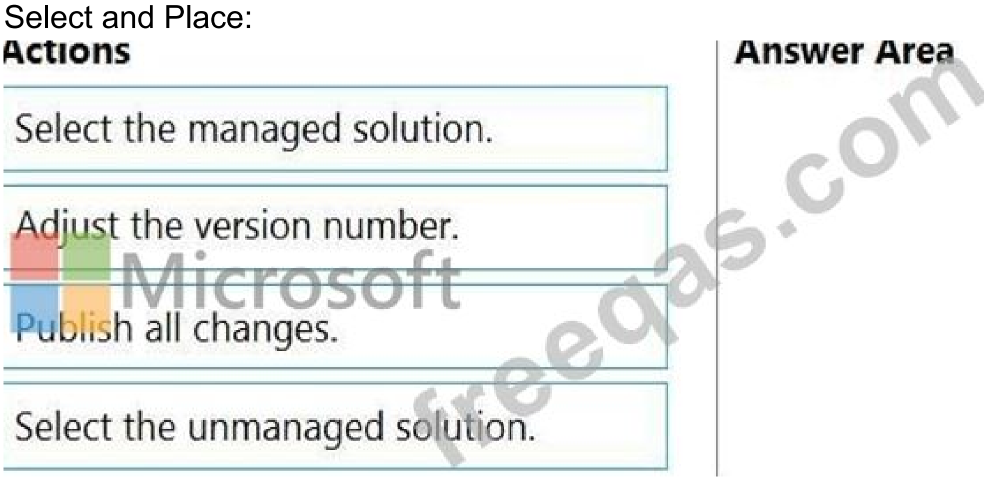
NEW QUESTION: 97

DRAG DROP

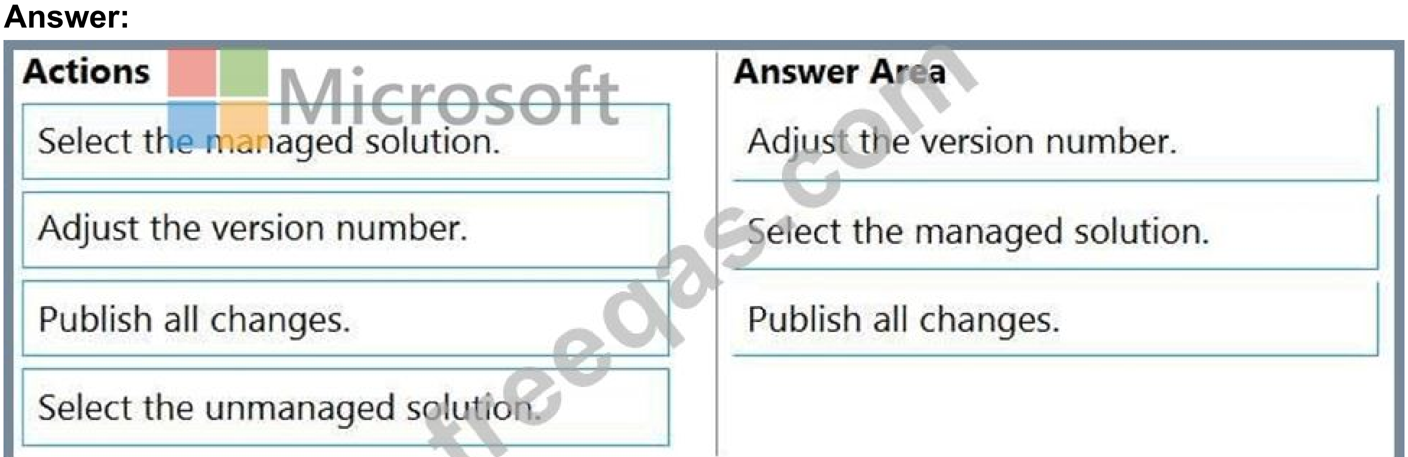
You have a solution that contains a Power Automate flow, an environment variable, and a model-driven app.

Which three steps should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:



Answer:



Explanation:

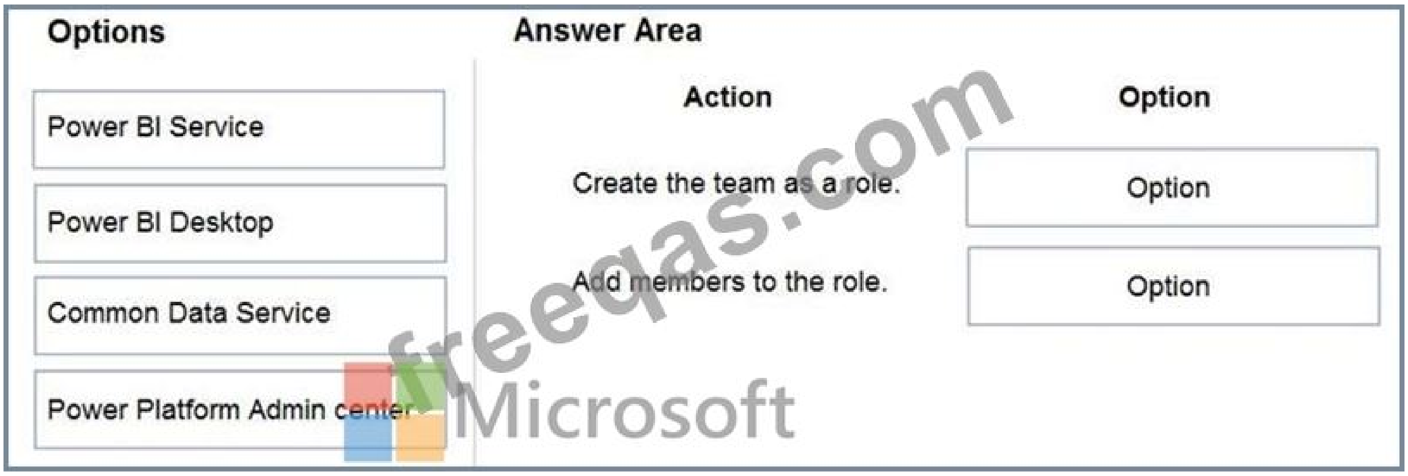
Step 1: Adjust the version number.

Step 2: Select the managed solution.

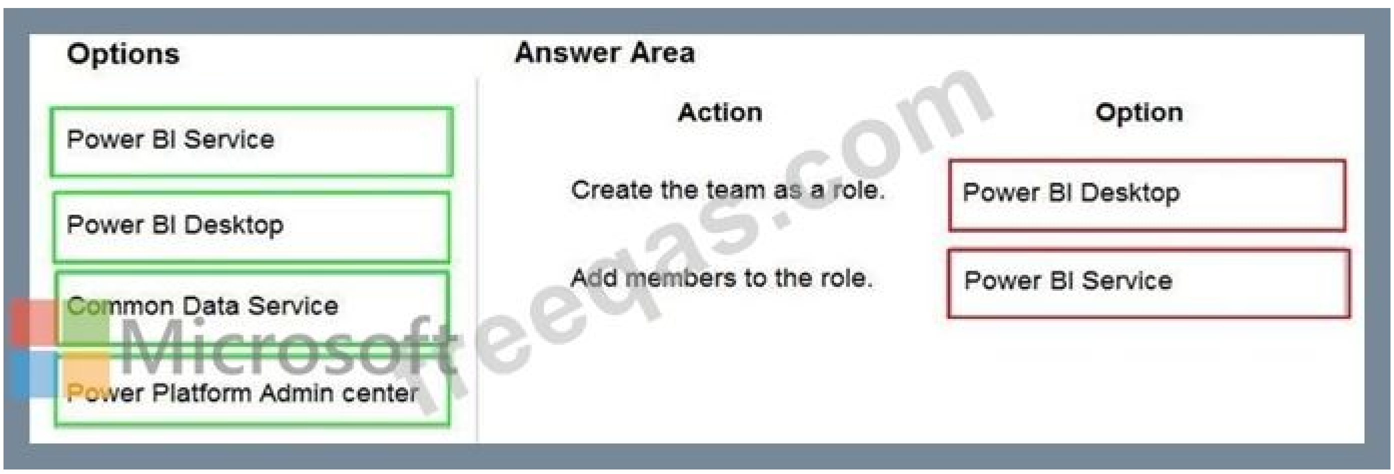
Managed Solution: A managed solution is a finalized solution that can be distributed and installed. They are created by exporting an unmanaged solution by setting restrictions to prevent any further customizations.
The whole point of Managed is locking down the Component states so they cannot be edited.
Deleting the Managed Solution will remove all its customisations as well as data contained.
Managed Solutions become read only once deployed so they cannot be manipulated.
Step 3: Publish all changes.
Reference:
https://powerusers.microsoft.com/t5/Power-Apps-Pro-Dev-ISV/Managed-vs-Unmanaged/td-p/495685

NEW QUESTION: 98
You create a canvas app named Hardware Order that suggests computer hardware to customers.
A value must be entered for the EmployeeID field when creating a new order if the value in the OrderType field does not contain the prefix test.
You need to configure the business rule.
Which two actions should you perform? Each correct answer presents part of the complete solution.
NOTE: Each correct selection is worth one point.
A. Set the scope of the business rule to Entity.
B. Add a Recommendation action and configure it to enter the order type.
C. Set the scope of the business rule to All Forms.
D. Use the following condition expression:
(OrderType Does not begin with [test]) AND (Modified By Does not contain data)
Answer: A,D (LEAVE A REPLY)
Reference:
https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/data-platform-create-business-rule

NEW QUESTION: 99
A company has the following divisions: wholesale and retail.
The manufacturer wants to create a single Power BI report to allow users to view data from a Microsoft SQL Server database.
You need to ensure that each user sees data only for the team to which the user is assigned.
How should you secure the report?
To answer, drag the appropriate options to the correct action. Each option may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.



Answer:



Reference:
https://docs.microsoft.com/en-us/power-bi/create-reports/desktop-rls

NEW QUESTION: 100

A company uses data loss prevention (DLP) policies. You have a Power Automate flow that posts Twitter mentions into a Microsoft SharePoint list.

You are not able to activate the flow.

You need to troubleshoot the issue.

What are two possible reasons why you cannot activate the flow? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

A. You are not assigned the Power Platform Admin role.

B. You placed all connectors into the Business group within the DLP policy.

C. You placed all connectors into the Non-Business group within the DLP policy.

D. You are not assigned the Environment Admin role.

Answer: (SHOW ANSWER)

D: DLP policies are created in the Power Platform admin center. They affect Power Platform canvas apps and Power Automate flows. To create a DLP policy, you need to be a tenant admin or have the Environment Admin role.

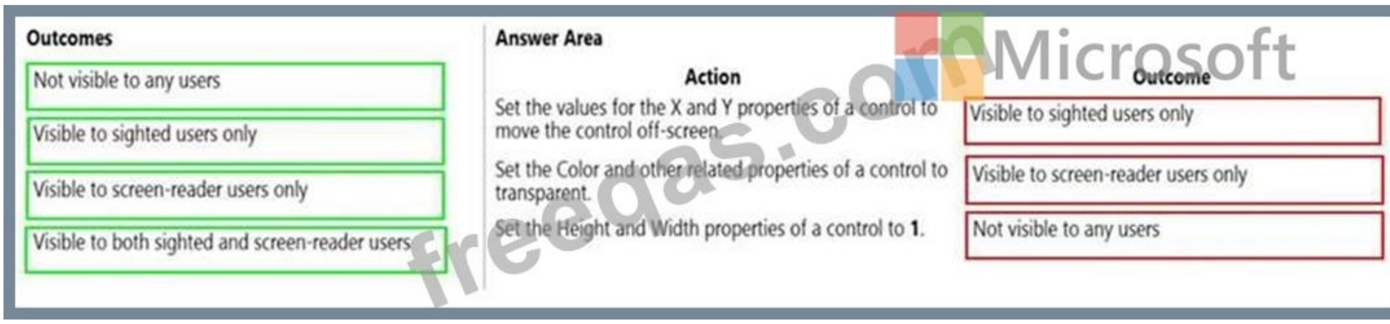
B: This table describes how the DLP policy you created affects data connections in apps and flows.

Connector matrix	SharePoint (Business)
SharePoint (Business)	Allowed
Salesforce (Business)	Allowed
Outlook.com (Non-Business)	Denied
Facebook (Blocked)	Denied
Twitter (Blocked)	$\boxed{\text{Denied}}$

Note: Any connector that resides in the Non-Business data group-such as Outlook.com-won't share data with apps and flows by using SharePoint or Salesforce connectors. Facebook and Twitter connectors are altogether blocked from being used in any app or flow in non-test environments such as production or default environments.
Reference:
https://docs.microsoft.com/en-us/power-platform/admin/wp-data-loss-prevention

NEW QUESTION: 101
You are designing a canvas app that will be used by all users including users who have vision impairments.
Which outcome is achieved by each action? To answer, drag the appropriate outcomes to the correct actions. Each outcome may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

Answer:



Reference:

https://docs.microsoft.com/sv-se/powerapps/maker/canvas-apps/accessible-apps

NEW QUESTION: 102

A coworker creates a canvas app.

The canvas app contains the following formul

a. The formula is attached to the OnVisible property of the first screen that users see:

```
Collect(
Toolbox,
{
    Tool: "Hammer",
    Quantity: 1
},
{
    Tool: "Screwdriver",
    Quantity: 2
}
)
```

You are updating the canvas app.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area	Yes	No
The formula will update multiple records in a data source named Toolbox if the records exist.	$\circ$	$\circ$
A local collection is created to store data if a data source named Toolbox does not already exist.	$\circ$	$\circ$
If a collection named Toolbox exists the formula will clear any existing records before making any changes.	$\circ$	$\circ$

Answer:

Answer Area	Yes	No
The formula will update multiple records in a data source named Toolbox if the records exist.	$\circ$	$\boxed{\circ}$
A local collection is created to store data if a data source named Toolbox does not already exist.	$\boxed{\circ}$	$\circ$
If a collection named Toolbox exists the formula will clear any existing records before making any changes.	$\circ$	$\boxed{\circ}$

Reference:
https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/functions/function-clear-collect-clearcollect

NEW QUESTION: 103

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are creating a canvas app that displays a list of accounts.

Users must be able to select an account and view details for the account. The app must include a feature that brings the user back to the list of accounts.

You add a blank screen named Screen_Accounts and add a gallery named Gallery_Accounts to the screen.

You set the data source of Gallery_Accounts to Accounts and add another blank screen named Screen_AccountDetail.

You need to complete the app.

Solution:

* Add a display form to Screen_AccountDetail.
* Set the OnSelect property of Gallery_Accounts to Navigate(Screen_AccountDetail).
* Set the data source of the form to Accounts.
* Set the Item property of the form to Selected.
* Add a back icon on Screen_AccountDetail and set its OnSelect property to Navigate(Screen_Accounts).

Does the solution meet the goal?

A. Yes

B. No

Answer: A (LEAVE A REPLY)
If you add a Display form control, the user can display all fields of a record or only the fields that you specify.
Reference:
https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/controls/control-form-detail
Create solutions Testlet 2 This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.
To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.
At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.
To start the case study
To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. When you are ready to answer a question, click the Question button to return to the question.
Background
Overview
Contoso, Ltd. produces industrial furnaces. The company is struggling to meet increased demand in production orders.
The company has corporate offices and manufacturing plants in Germany. The company also has offices and manufacturing plants in other regions of the world.
The company purchases a plant from another company. The plant has been in operation for over 25 years.
Current environment
Accounting system and purchasing
Operations for the company are managed very informally. Only a small number of long-term employees are aware of all manufacturing processes.
Manufacturing and planning
* The company has a cloud-based ERP/accounting system and uses the General Ledger, Accounts Receivable, and Accounts Payable modules. The current system does not have any modules that handle shop floor or manufacturing planning functionality.
* Employee information is maintained only within the accounting system. Access to the information is strictly controlled due to privacy regulations and company policies.

* All purchasing of raw materials is performed based on bills of material (BOMs) generated by the engineering department when engineering prints are created.
* The corporate office uses Dynamics 365 Finance. The operations manager reports that Dynamics 365 Finance will not be implemented for the manufacturing plants for at least five years.

Sales

* The plant that Contoso, Ltd. acquires uses Microsoft Excel workbooks and Microsoft Word documents to track the sales pipeline, requests for quote responses, and work estimates. The documents are stored on shared network drives.
* Printed engineering drawings are sometimes accidently used across orders. This results in rework, cost over runs, and missed deliveries.
* The company uses Job Traveler documents to detail the operations that need to be performed and the materials needed for a given job number.

Requirements

Solution

* Requests for quotes are currently stored in a Sales Log workbook. The workbook includes the following information:

- Customer request number
- Customer name
- Description
- Estimated value of the sale
- Status of the Request for Quote (RFQ) with the values of Won, Lost, No Bid, and Cancelled
- Names of the sales manager, salesperson, and estimator
- Name of the product line
- Date the quote was sent to the customer
- Approximate start and finish dates of the project
- Date the order was received, if won
- Job number, which is assigned if won

* The company has a formal process in place for managing estimates. Some sales quotes lack required supporting documentation including estimates for labor and materials even though a formal process is in place. The company wants to incorporate the formal process as part of an app.
* Salespeople often do not set status of RFQs in the Sales Log to Won when a sale is closed and the customer purchase order is received.
* An accurate sales pipeline and win/loss information cannot currently be reported because the close probability field in the Sales Log is being set to 100% when a sale is closed and 0% when a sale is lost.
* Setting up a folder system on the network drive by a customer had not improved the hand-off of the current version of the sales quote to manufacturing.

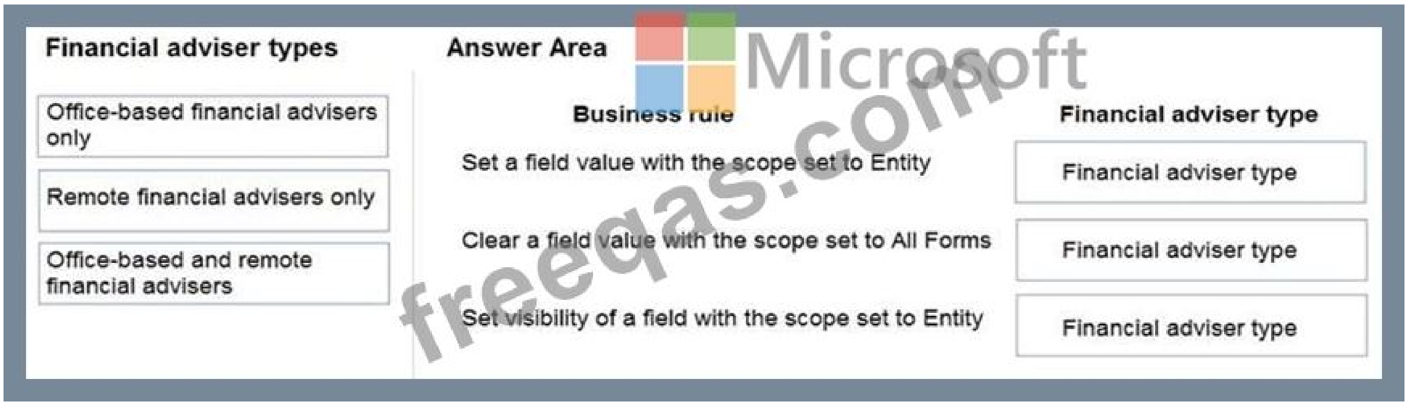
General

You plan to create a solution that uses Microsoft Teams and Power Platform.

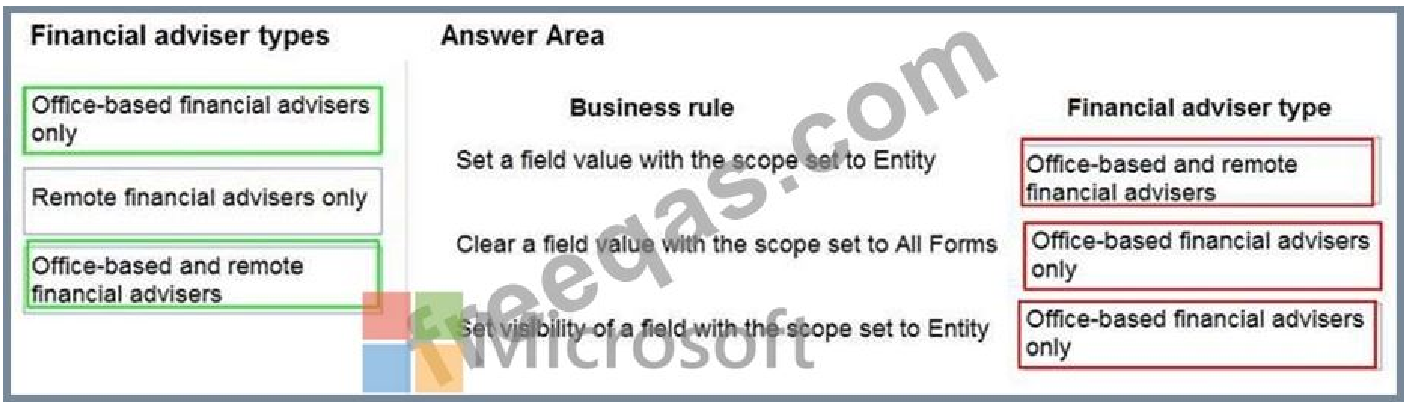
You must convert the Sales Log workbook to a Common Data Service database.
Each department will have a separate Teams channel. Employees must only be able to access the channel for their department. All employees and management will have read access to a general company channel. The Teams site must include the following channels:
Sales
* The Sales dashboard must reside in the Sales channel and must include information about active quotes, sales pipeline, and year-to-date sales KPIs for sales quotas by region.
* All Sales-related documents must be stored in folders in the files location for this channel. Document versioning will be enabled. You must store the 10 most recent versions of a document.
Manufacturing
* A dashboard that shows a capacity Heat map by month as well as expected sales that are likely to close for the next month.
* A sortable listing of all in-process jobs from the Job Setup table, by customer, start date, and product.
* Printed paper drawings must no longer be used. The drawings must be stored in folders in the files location for the manufacturing channel.
You must create the following apps:
Time Tracking
You must create a canvas app to track time for each employee on mobile devices. The app must include the following:
* a Sign-in screen
* a screen to list the week's time entries for the employee
* a screen to edit current time entries for the employee
The app must meet the following requirements:
* The app must store its data in the existing on-premises Microsoft SQL Server instance.
* Employees must only be able to access their own time tracking records from the app.
* Employees must record all time spent in the fabrication of each customer job.
* Employees must only be able to modify time records for the current and previous day.
* Employees must be able to scan their badges to check in and out of work. Each badge contains the employee name and a current picture.
* A QR code must be added to all employee badges. The code must include the employee's number.
* Job Traveler documents must be printed as PDF documents and must include UPC E barcodes for the job number and task number. The barcodes will be used with the time tracking application.
Sales
The Sales app must meet the following requirements:
* Provide a central location for all sales pipeline and quote information that is easily accessible and maintains all of the versions of the estimate, quote, and engineering documents.
* Include a dashboard that shows all currently active quotes, their status in the sales cycle, the probability of closing, and estimated manufacturing and installation dates, by customer, product division, status, and salesperson.

* The Sales Log app must enforce process standards related to the completion of estimates and supporting materials needed during the sales lifecycle.
* Automatically perform the following actions immediately when a sale is won:
- Generate a sequential job number.
- Copy key sales information to the Job Setup entity used by manufacturing.
* If the sale is lost, the Status field must be set to Lost and the reason for the loss must be entered into a provided text field. The reason must be added to the end of the description field.
* Ensure that employees can easily update the Sales Log even if they are at a customer site.
Manufacturing and planning
The app must meet the following requirements:
* Provides features to plan and predict capacity resource requirements for current and upcoming orders in the pipeline.
* Replace paper timesheets and track check-in, check-out, breaks, and the time spent on each job task.
* Record time elapsed while performing work and for viewing of engineering drawings.
* The Job Setup entity must store its data in the existing on-premises SQL Server instance.
* Job Traveler documents must be generated as a PDF document and printed from the Job Setup entity.
Issues
* Users report that the customer request number is difficult to interpret. They request that you change the number to a system generated sequential number.
* The operations manager reports that users often incorrectly sign in to the time tracking app. The operations manager asks that the time tracking app display the employee's photo once they have scanned their badge.
* Users want to be able to see their weekly total time entered from all screens.
* Testers report that they can see time entries in the Time Tracker app, not just their own. Additionally, they can also edit any existing time entries.

NEW QUESTION: 104
You create the following apps for a company that provides financial guidance services: a model-driven app for financial advisers that work in the company's offices and a canvas app for remote financial advisers.
You need to create business rules for a custom counselling entity used by all financial advisers.
Who will be affected by the business rules?
To answer, drag the appropriate financial adviser types to the correct business rules. Each financial adviser type may be used once, more than once, or not at all. You may need to drag the split bat between panes or scroll to view content.
NOTE: Each correct selection is worth one point.



Answer:



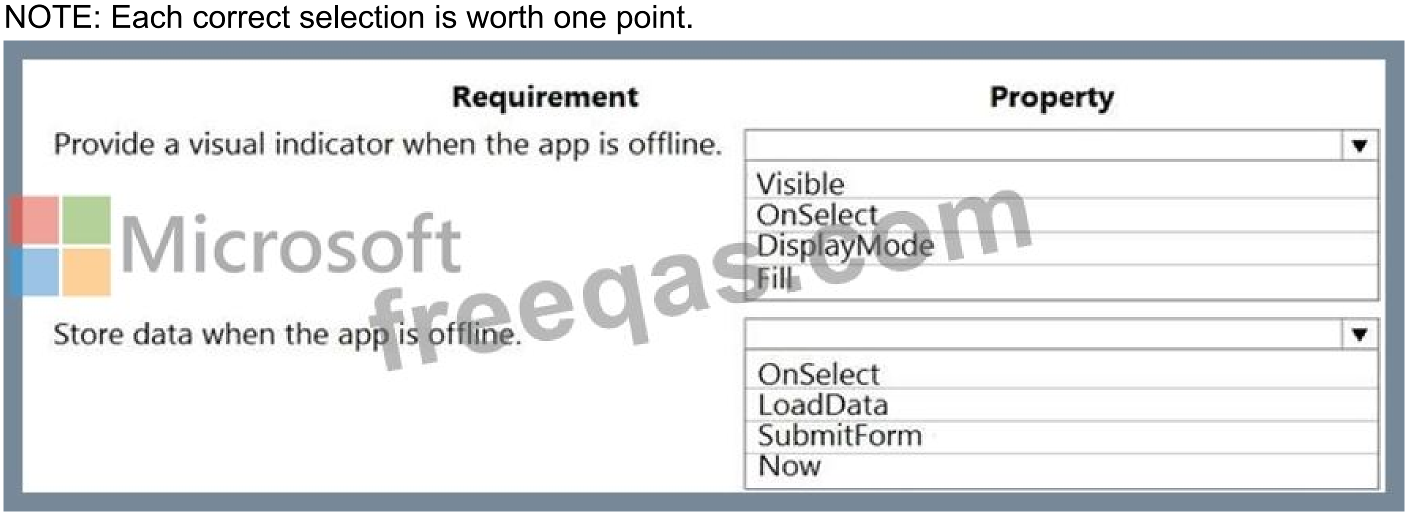
Reference:
https://docs.microsoft.com/en-us/powerapps/maker/data-platform/data-platform-create-business-rule

NEW QUESTION: 105

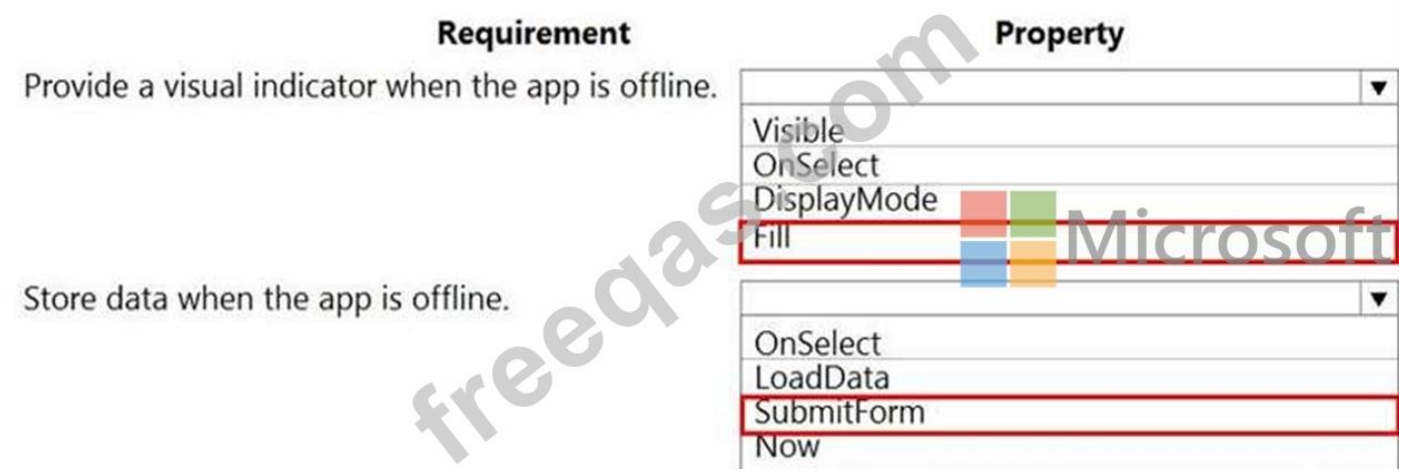
You need to configure the app to meet the requirements.

Which object properties should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.



Answer:



Explanation:
Box 1: Fill
Scenario: You must display a visual indicator in the app so that sales representatives know whether the app is offline before submitting reports.
Fill - The background color of a control.
Incorrect Answers:
DisplayMode - The mode to use for data cards and controls within the form control.
Box 2: SubmitForm
Scenario: When data is submitted offline, the data must be stored in the app until the app is back online.
Use the SubmitForm function in the OnSelect property of a Button control to save any changes in a Form control to the data source.

NEW QUESTION: 106
You create a canvas app named Hardware Order that suggests computer hardware to customers.
A value must be entered for the EmployeeID field when creating a new order if the value in the OrderType field does not contain the prefix test.
You need to configure the business rule.
Which two actions should you perform? Each correct answer presents part of the complete solution.
NOTE: Each correct selection is worth one point.
A. Set the scope of the business rule to Entity.
B. Add a Recommendation action and configure it to enter the order type.
C. Set the scope of the business rule to All Forms.
D. Use the following condition expression:
Answer: A,D (LEAVE A REPLY)
(OrderType Does not begin with [test]) AND (Modified By Does not contain data)

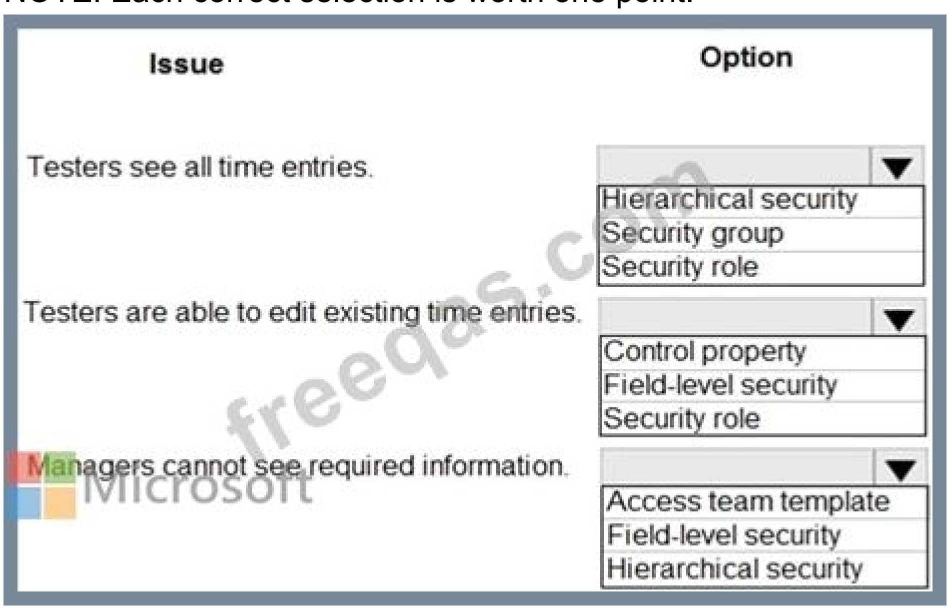
NEW QUESTION: 107

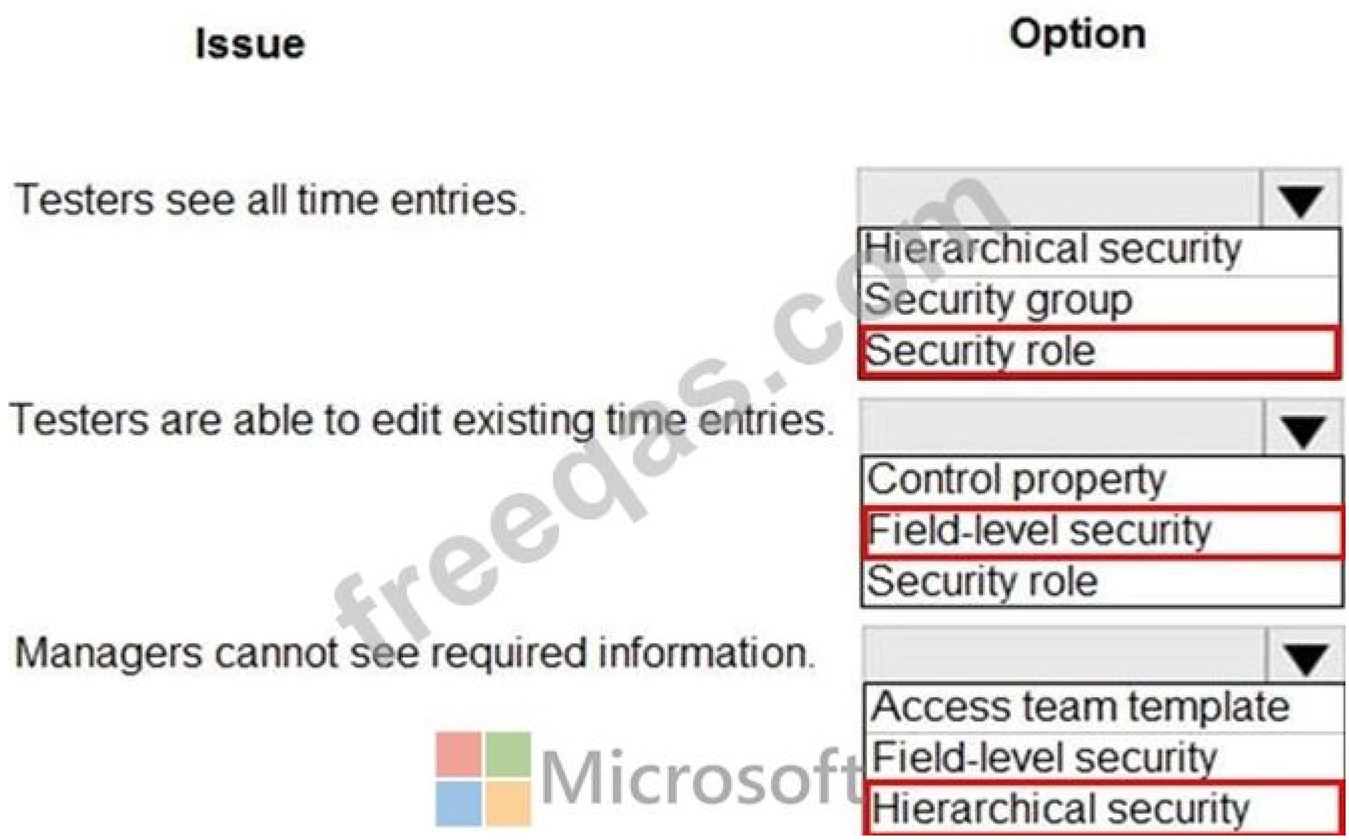
You need to resolve the issues found during testing.

Which option should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.



Answer:

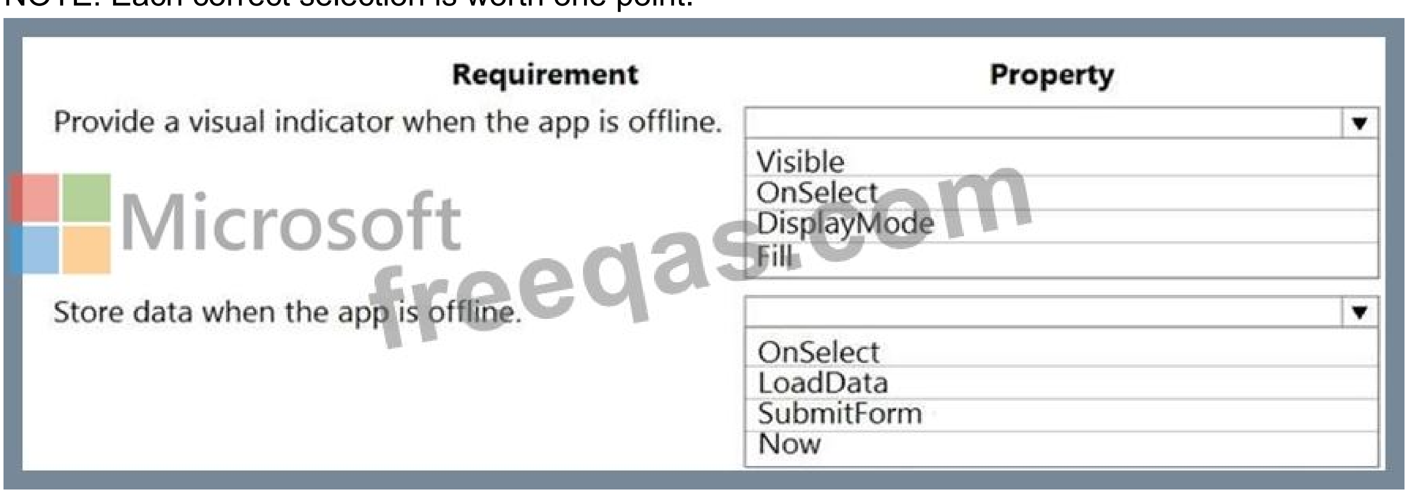


NEW QUESTION: 108

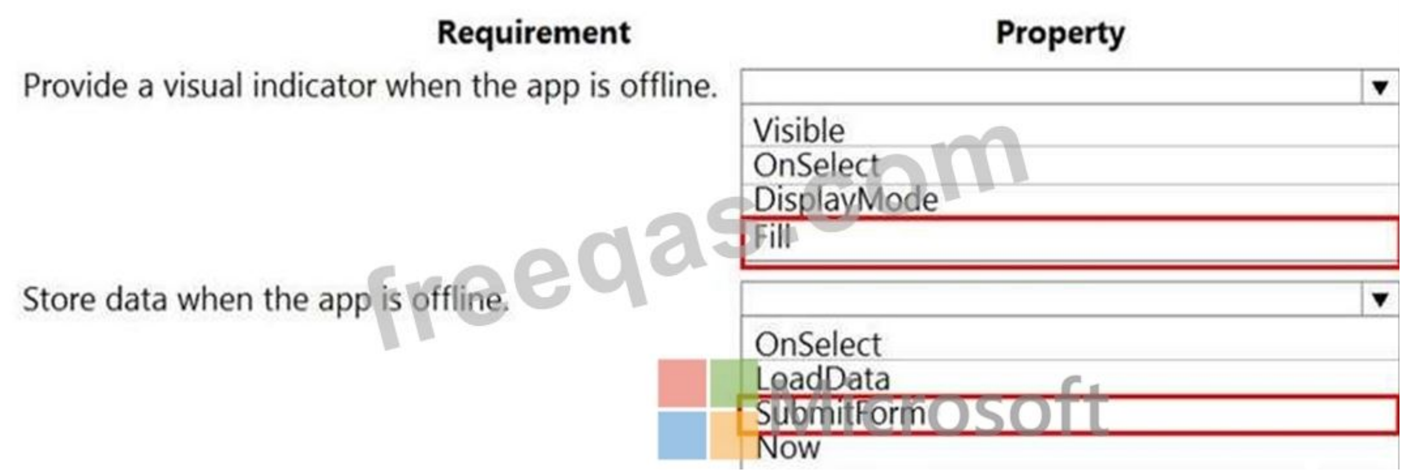
You need to configure the app to meet the requirements.

Which object properties should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

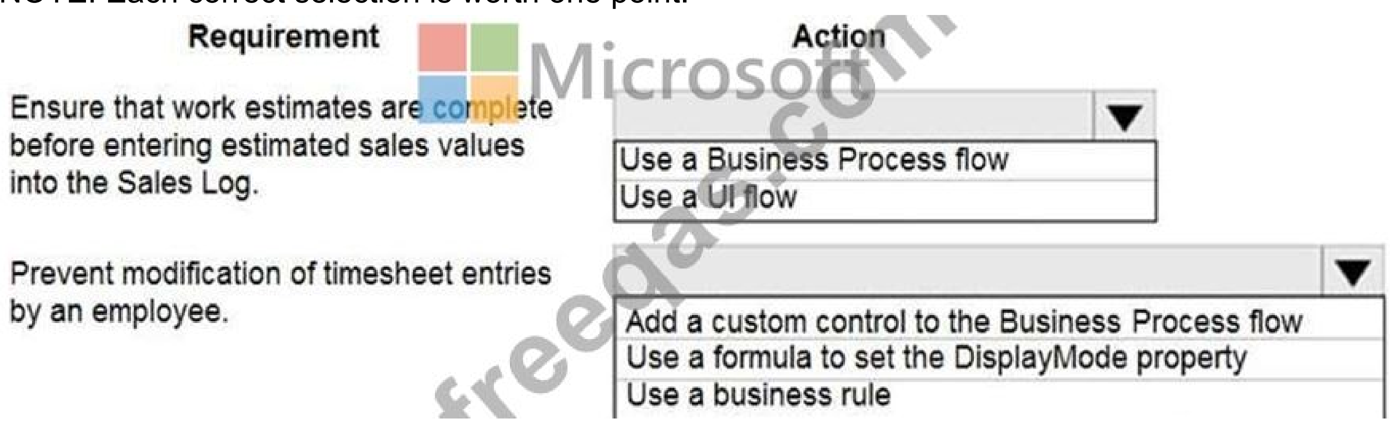


Answer:

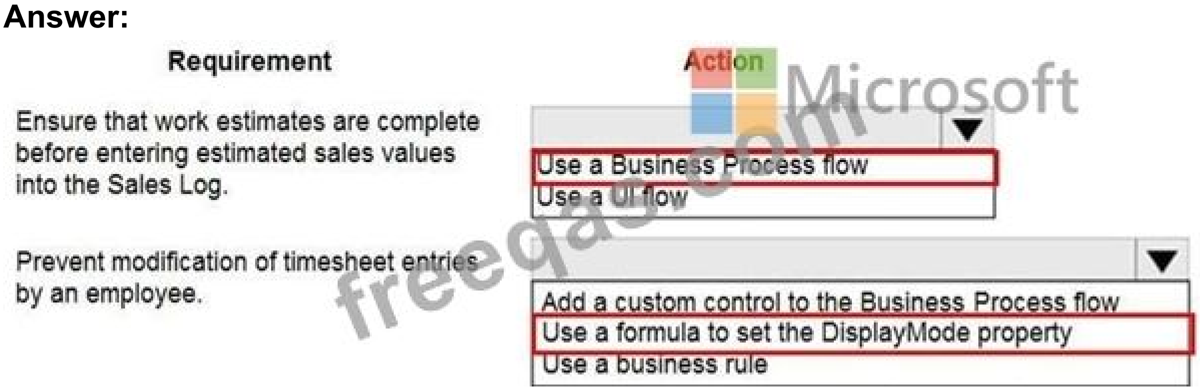


Reference:
https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/controls/control-screen
https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/functions/function-form

NEW QUESTION: 109
You need to configure the system to meet the sales requirements.
What should you do? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.



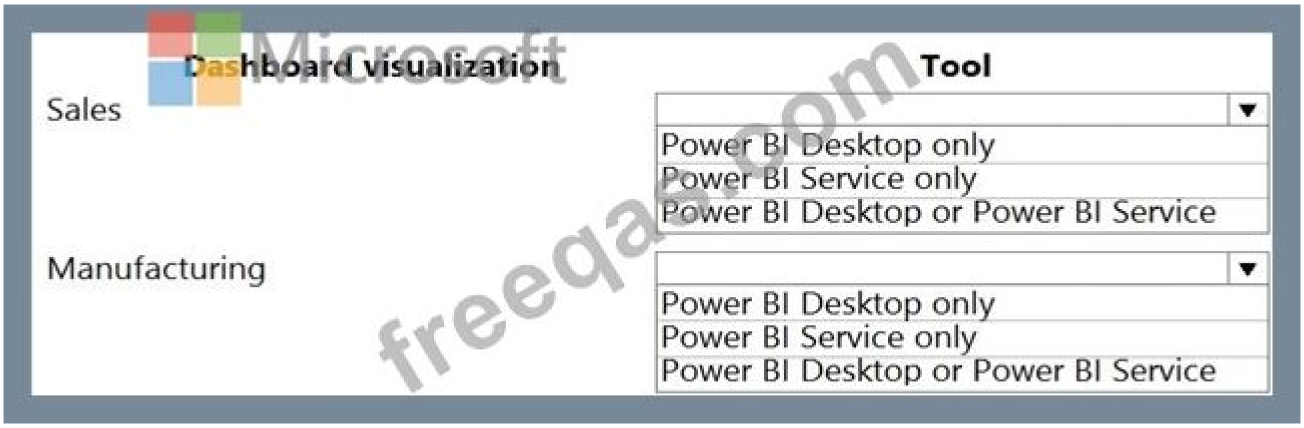
Answer:



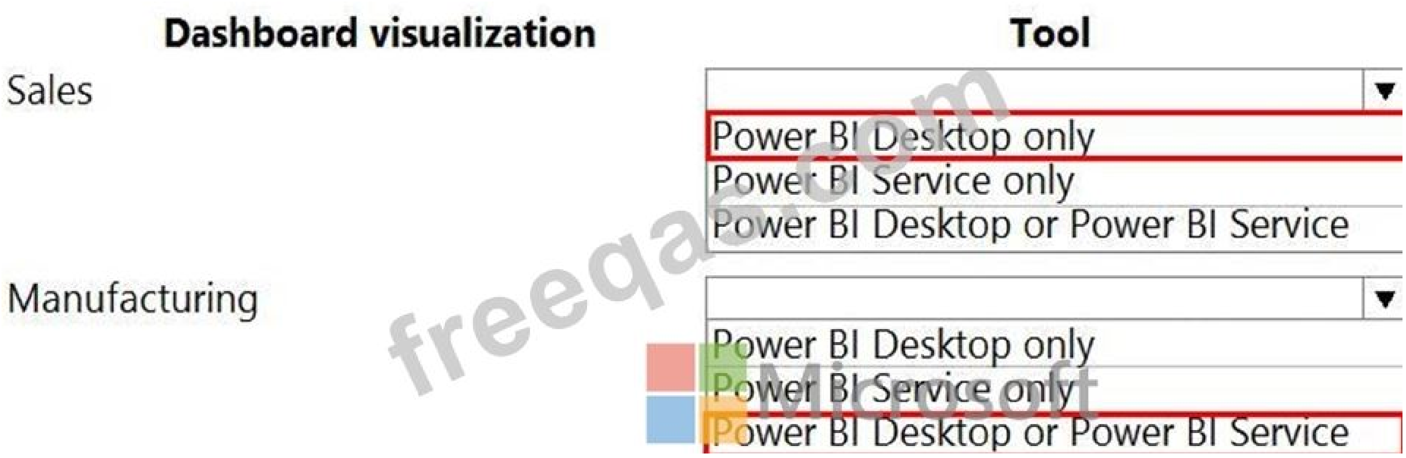
Reference:
https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/controls/control-form-detail

NEW QUESTION: 110
You need to create the solution assets.

What should you use to create the visualizations? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

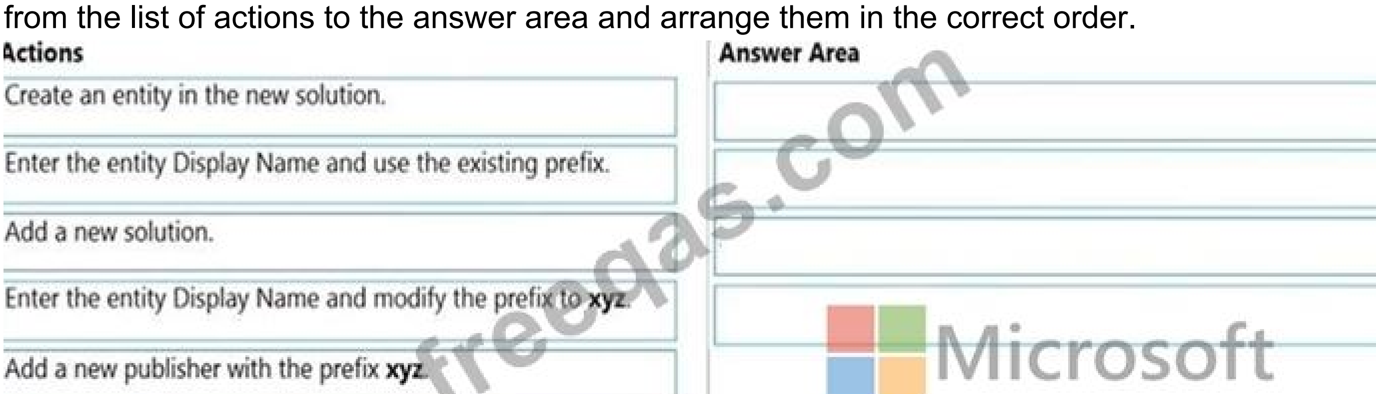


Answer:

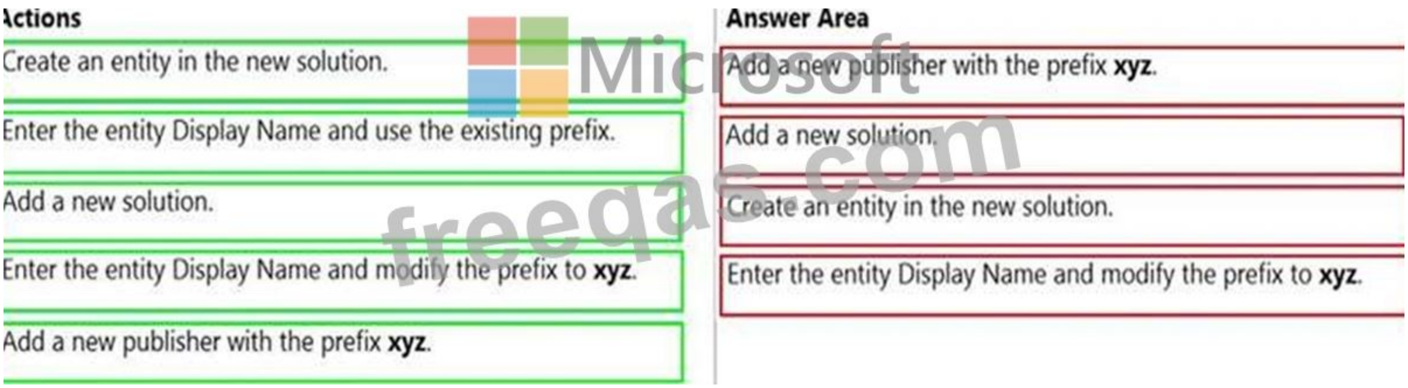


Reference:
https://docs.microsoft.com/en-us/power-bi/fundamentals/service-service-vs-desktop

NEW QUESTION: 111
You are configuring a new Common Data Service environment by using the Power Apps Maker portal.
You need to create an entity that uses the prefix xyz.
Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.



Answer:



Reference:
https://docs.microsoft.com/en-us/powerapps/maker/common-data-service/data-platform-create-entity

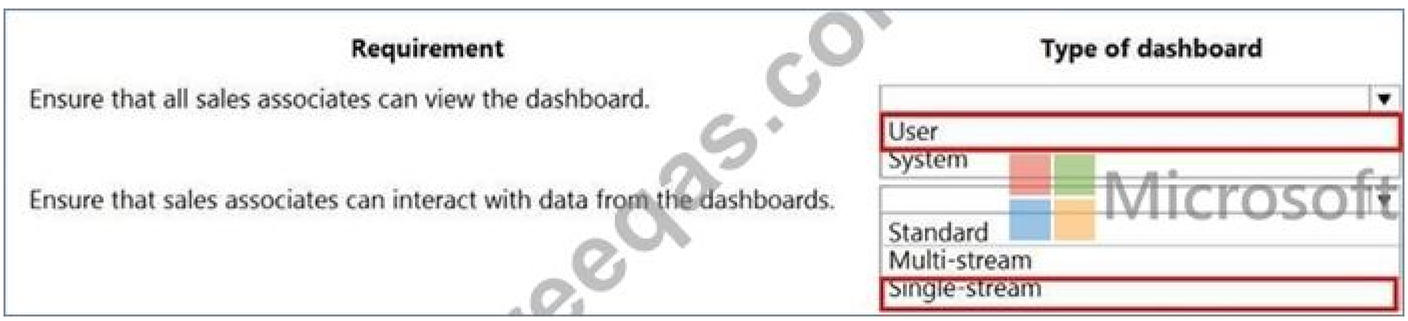
NEW QUESTION: 112
You create a custom field on the Account entity.
Members of TeamA must have full access to the field. Members of TeamB must have no access to the field.
You need to configure security.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

NEW QUESTION: 113
An administrator plans to create and deploy dashboards for use only by sales associates. The dashboards will display the current sales pipeline, open cases, recent major wins, and key opportunities by postal code.

Sales associates must be able to act on the specific data displayed in dashboards.
You need to create the dashboards.
Which type of dashboards should you create? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:



Reference:
https://docs.microsoft.com/en-us/powerapps/developer/model-driven-apps/create-dashboard
https://docs.microsoft.com/en-us/powerapps/maker/model-driven-apps/configure-interactive-experience-dashboards

NEW QUESTION: 114
You need to implement the change requested by the operations manager.
Which control should you use?
A. Camera
B. Shape
C. Add picture
D. Image
Answer: (SHOW ANSWER)
Scenario: The operations manager asks that the time tracking app display the employee's photo once they have scanned their badge.
Image control in Power Apps is a control that shows an image from, for example, a local file or a data source.
Incorrect Answers:
C: Add Picture: With this control users can take photos or upload image files from their device and update the data source with this content. On a mobile device the user is presented with the device's choice dialog to choose between taking a photo or selecting one already available.

This control is a grouped control containing two controls: an Image and an Add picture button.
The Image control shows the uploaded image or a placeholder if no image has been uploaded.
The Add picture button prompts for an image to be uploaded.
Not: If you add one or more Image controls to your app, you can show individual images that aren't part of a data set, or you can incorporate images from records in data sources.
