NEW QUESTION: 1

You provision an Oracle SOA Cloud Service instance and specify a compute shape so that the JVM heap size for WebLogic Serve, and Load Balancer processes are determined automatically.

Which statement is correct after provisioning the instance in this scenario?

- A. You can change the heap size to a maximum of 32GB.
- B. You can change the heap size by logging a Oracle Cloud Support Service Request.
- C. You can change the heap size by using the Weblogic Server Administration Console.
- D. You cannot change the heap size once the Service Instance is provisioned.

Answer: C (LEAVE A REPLY)

NEW QUESTION: 2

You are designing a new integration in OIC that needs to expose a REST-ful interface trigger for client applications.

When choosing request and response options using the REST Adapter Endpoint Configuration Wizard, which is a valid consideration? (Choose the best answer.)

- A. If you select a PUT or POST action (HTTP method), you must define a JSON response payload format.
- B. Both standard and custom HTTP headers can be defined for either the request or response.
- C. Although you can define both query and template parameters, only template parameters will be available for mapping in the mapper because query parameters are considered optional.

D. File attachments can be accepted as a request option for the Trigger interface, but you cannot include attachments as a response to the client.

Answer: (SHOW ANSWER)

Explanation/Reference:

NEW QUESTION: 3

Which four are states that a device can be in throughout its lifecycle?

- A. Activated
- B. Decommissioned
- C. Disabled
- D. Saved
- E. Deactivated
- F. Registered

Answer: A,B,E,F (LEAVE A REPLY)

<https://docs.oracle.com/en/cloud/paas/iot-cloud/iotgs/developing-applications-oracle-internet-things-cloud-service.pdf>

NEW QUESTION: 4

Which four statements are correct regarding the differences between WSDL/SOAP and REST/JSON?

- A. REST is typically invoked with HTTP verbs.
- B. Modern API-First architectures prefer to use the-and-true WSDUSOAP services over REST services because they are richer and provide a tighter contract
- C. WSDL is a tight contract; REST is a loose contract
- D. WSDL is a request for a service; REST is a request for a resource
- E. REST more easily used in developing UIs than WSDUSOAP. REST is gaining popularity in application development.
- F. WSLD is simpler, REST is richer

Answer: B,D,E,F (LEAVE A REPLY)

NEW QUESTION: 5

Oracle SOA Cloud Service (SOA CS) includes a number of built-in adapters to include all of the technology adapters delivered with SOA Suite.

When using one of these technology adapters in a composite application deployed in SOA CS, which two are valid approaches for facilitating connectivity to on-premises applications and systems?

- A. WLST script
- B. VPN service
- C. PL/SQL procedure
- D. SSH tunnel
- E. SOA on-premises connectivity agent

Answer: B,D (LEAVE A REPLY)

Oracle SOA Cloud Service includes a number of adapters.

All of the technology adapters delivered with SOA Suite are available for Oracle SOA Cloud Service, Service Bus, and SOA Suite domain types. Connectivity to on-premises applications should be verified, and either SSH tunnels or VPN service should be used for connectivity to on-premises applications.

<https://docs.oracle.com/en/cloud/paas/soa-cloud/csbcs/adapters-oracle-soa-cloud-service.html>

NEW QUESTION: 6

Which four are key features of Oracle Integration Cloud Enterprise (OIC)?

- A. Data stream analytics
- B. Application Integration
- C. Web and Mobile application creation
- D. Business process automation
- E. Enterprise Service Bus (ESB)
- F. Business to Business (B2B)

Answer: A,B,C,E (LEAVE A REPLY)

<https://docs.oracle.com/en/cloud/paas/integration-cloud/user-stream-analytics/working-stream-analytics.html#>

https://cloud.oracle.com/en_US/OIC/features

NEW QUESTION: 7

Which three actions once they have been configured are allowed to be repositioned to another location within the design canvas of an orchestration style integration flow?

- A. Stage File with Read File in Segments operation
- B. JavaScript Call
- C. Stage File with Read File operation
- D. For Each
- E. Stage File with Write File operation
- F. Switch

Answer: (SHOW ANSWER)

NEW QUESTION: 8

Which role is needed for managing users from Oracle Internet of Things (IoT) Cloud Service?

- A. lotUsersGroup
- B. TotAdministratorsGroup
- C. System Administrator
- D. lotOperatorsGroup

Answer: (SHOW ANSWER)

Reference:

<https://docs.oracle.com/en/cloud/saas/iot-asset-cloud/iotaa/using-oracle-iot-asset-monitoring-cloud-service.pdf>

NEW QUESTION: 9

What is the "Decision Table" in Business Rules in Process Cloud Service?

- A.** a range value set in a spreadsheet-like format that defines a list of allowed value ranges for the input and output data objects of a decision
- B.** a decision matrix that organizes if/then rules into a spreadsheet-like format, where rows represent conditions and actions, and columns match condition values to action alternatives
- C.** an if/then rule that has one or more conditions (if statements) that together are true or false, and one or more actions (then statements) that are applied if the conditions are true
- D.** a value set in a spreadsheet-like format that defines a list of allowed values for the input and output data objects of a decision

Answer: ([SHOW ANSWER](#))

Reference:

<https://docs.oracle.com/en/cloud/paas/process-cloud/user/creating-if-then-rule-business-rules.html>

<https://docs.oracle.com/en/cloud/paas/process-cloud/user/creating-decision-table-business-rules.html#GUID-26D3DF2A-D6D8-404F-834D-EE512E787630> Creating a Decision Table in Business Rules A decision table organizes if/then rules into a spreadsheet-like format, in which rows represent conditions and actions, and columns match condition values to action alternatives.

NEW QUESTION: 10

Which three Service-Oriented Architecture Cloud Service (SOA CS) Components can route a message to an end point?

- A.** Oracle Mediator
- B.** Oracle Business Rules
- C.** Oracle BPEL Process Manager
- D.** Oracle Service Bus

Answer: **A,B,C** ([LEAVE A REPLY](#))

<https://docs.oracle.com/en/cloud/paas/soa-cloud/csbc/components-oracle-soa-cloud-service.html>

NEW QUESTION: 11

When a connection is in edit mode and the browser crashes, the connection becomes locked, which then prevents it from being edited.

Which two users can unlock the connection? (Choose two.)

- A.** any user

- B. a user with the Administrator Role
- C. a user with the Designer Role
- D. the same user who has edited the connection

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 12

Which three are tasks that can be performed in the Monitoring page for device data messages and alert messages?

- A. View
- B. Create
- C. Search
- D. Update
- E. Filter

Answer: A,B,C ([LEAVE A REPLY](#))

NEW QUESTION: 13

Which "Decision Table" is used to configure decision logic in process application? (Choose the best answer.)

- A. an if/then rule that has one or more conditions (if statements) that together are true or false, and one or more actions (then statements) that are applied if the conditions are true.
- B. a value set in a spreadsheet-like format that defines a list of allowed values for the input and output data objects of a decision.
- C. a range value set in a spreadsheet-like format that defines a list of allowed value ranges for the input and output data objects of a decision.
- D. a decision matrix that organizes if/then rules into a spreadsheet-like format, where rows represent conditions and actions, and columns match condition values to action alternatives

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 14

Which two statements are true about implementing an API-First strategy? (Choose two.)

- A. The API is to be developed first before any UI or new business logic are created.
- B. You define the API definition/contract first before any work on its implementation or any applications that use it, allowing teams to work in parallel.
- C. The code to execute business logic needs to exist and be exposed as an API first before you build a strategy around it.
- D. It generally is assumed that SOAP/WSDL are the key specifications for defining the API.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 15

What are the four steps required to complete the task 'create a connection'?

- A. Configure Connection Properties

- B. Import SSL Certificate
- C. Test Connection
- D. Select an Adapter
- E. Configure Lookup
- F. Configure Connection Security

Answer: ([SHOW ANSWER](#))

Reference:

<https://docs.oracle.com/en/cloud/paas/integration-cloud-service/icsug/creating-connections.html#GUID-10DBB72D-F6F9-4851-B2BA-9E593CF65F2E>

NEW QUESTION: 16

You have a single synchronous integration flow updating systems with several external invocations within multiple loops. Several client applications are experiencing blocking timeouts waiting for confirmation of the complex processing logic.

Which is a legitimate strategy to mitigate this issue?

- A. Increase the blocking timeout within the OIC integration settings to allow for extended time.
- B. Split into smaller integration flows that can be orchestrated sequentially from a master synchronous flow.
- C. Change the implementation logic to invoke multiple fine-grained external API calls within a single loop.
- D. Change to an asynchronous flow that provides a notification when processing is complete.

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 17

Which three background colors are displayed for autocomplete in Process Cloud Service?

- A. Blue for complex binding names (their children may contain valid binding names)
- B. Red for invalid binding names
- C. Green for valid binding names
- D. Orange for unmatched binding names

Answer: A,B,C ([LEAVE A REPLY](#))

<https://docs.oracle.com/en/cloud/paas/process-cloud/user/binding-form-data-controls.html#GUID-CECD2F13-1E1A-457D-8BC8-8D605EEB213B> The background colors displayed for the autocomplete options are:

- * Green for valid binding names
- * Red for invalid binding names
- * Blue for complex binding names (their children may contain valid binding names) If a control isn't linked to an attribute or if a control is linked to an invalid attribute, an error message is displayed in the Binding field and an error icon is displayed in the canvas. When a control doesn't have a valid binding, any value entered into the control in runtime is not passed on to the form payload.

NEW QUESTION: 18

Given that a gateway node should have a dedicated user credential for connecting to the API Platform Management Service, what grants should be assigned to that user?

- A. Deploy API
- B. View all Details
- C. Node Service Account
- D. Deploy to Gateway

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 19

Which four are valid for integration using Service Oriented Architecture Cloud Service (SOACS)?

- A. Create Files in the required format and Orchestrate PBL data loads into the HCM/ERP Cloud.
- B. Create Files in the required format and Orchestrate ADFDi data loads into the HCM/ERP Cloud.
- C. Create Files in the required format and Orchestrate FBDL data loads into the HCM/ERP Cloud.
- D. Retrieve/Update supported data elements on the SaaS applications using REST Services in real time.
- E. Create Files in the required format and Orchestrate HDL data loads into the HCM/ERP Cloud.
- F. SOACS has read access to HCM and ERP Cloud (SaaS) Applications data.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 20

Which three are types of certificates that can be imported from Settings?

- A. Identity Certificate
- B. Multi Domain SSL Certificate
- C. Trust Certificate

- D. Message Protection Certificate
- E. Unified Communications Certificate

Answer: A,C,D (LEAVE A REPLY)

Reference:

<https://docs.oracle.com/en/cloud/paas/integration-cloud-service/icsug/managing-security-certificates.html#GUID-9F6A7704-A8DE-484E-8D8A-06D51AD9D13C>

NEW QUESTION: 21

Which two statements are true about "Decision Snapshots"?

- A. These snapshots, once activated, cannot be used independently in multiple applications.
- B. You cannot delete the decision model snapshot that has already been activated.
- C. Decision snapshots are read-only copies of a decision model.
- D. Decision model can be activated on DMN server.

Answer: B,C (LEAVE A REPLY)

<https://docs.oracle.com/en/cloud/paas/integration-cloud/user-processes/manage-decision-model-snapshots.html>

NEW QUESTION: 22

What are two possible reasons for a Gateway not getting started?

- A. There is an invalid certificate.
- B. The provisioning file may contain correct Activation ID and Activation Secret.
- C. The provisioning file may contain incorrect Activation ID and incorrect Activation Secret.
- D. The IoT Service may be down.

Answer: C,D (LEAVE A REPLY)

NEW QUESTION: 23

You have a synchronous integration flow updating systems with several external invocations. Most client applications are experiencing timeouts waiting for the synchronous response confirmation of the complex processing logic.

Which is a legitimate strategy that will mitigate this issue? (Choose the best answer.)

- A. Increase the blocking timeout within the OIC integration settings to allow for extended time.
- B. Change the design implementation strategy to an asynchronous flow that provides a separate notification to clients when the processing is complete.
- C. Change the implementation logic to invoke multiple fine-grained external API calls within a single loop.
- D. Split into smaller synchronous integration flows that can be orchestrated sequentially from a master synchronous flow.

Answer: C (LEAVE A REPLY)

NEW QUESTION: 24

Which Enterprise Application System can be integrated with Oracle Internet of Things (IoT) Cloud Service?

- A. any system capable of receiving HTTP connections or making HTTP requests
- B. only systems which are deployed on Windows or Unix platform
- C. a system which exposes REST Service
- D. a system which exposes WSDL

Answer: C (LEAVE A REPLY)

<https://docs.oracle.com/en/cloud/paas/iot-cloud/iotgs/integrating-oracle-integration-cloud-service-oracle-iot-cloud-service.html>

NEW QUESTION: 25

Which two statements are true about implementing an API-First strategy?

- A. The API is to be developed first before any UI or new business logic are created.
- B. The code to execute business logic needs to exist and be exposed as an API first before you build a strategy around it.
- C. It generally is assumed that SOAP/WSDL are the key specifications for defining the API.
- D. You define the API definition/contract first before any work on its implementation or any applications that use it, allowing to work in parallel.

Answer: (SHOW ANSWER)

NEW QUESTION: 26

Which three are created and managed using the Integration page in Process Cloud Service (PCS)?

- A. ICS Integrations
- B. Java Cloud Services
- C. Rest Connectors
- D. Web Service Connectors

Answer: A,C,D (LEAVE A REPLY)

NEW QUESTION: 27

Your design of an asynchronous OIC integration flow includes the requirement for additional processing logic that is conditionally based on the results returned to the integration instance from earlier external service invocations. You have decided to leverage the Switch action to facilitate this implementation.

Which is a valid consideration concerning the configuration and capabilities of the Switch action?

- A. XPath version 2.0 functions can be used to create more complex conditional expressions for a branch.
- B. All branches within the Switch action must have a conditional expression defined.
- C. You may need to create conditional expressions for each branch with greater complexity because nested Switch actions are not supported.

D. Any data objects returned within a branch of a Switch action will only be visible within the implicit scope of that branch and not visible in the main flow of the integration outside of the Switch action.

Answer: B (LEAVE A REPLY)

NEW QUESTION: 28

What are two key benefits of Oracle Web Service Manager (OWSM) in the management and security of Web services across the organization? (Choose two.)

A. OAuth services are used for REST based services.

B. Security is controlled by the developer of the service and this gives greater control to the development of the service.

C. OWSM provides a framework that is externalized and declarative outside of the web service implementation.

D. Developers no longer need to understand security specifications and security implementation details.

Answer: C,D (LEAVE A REPLY)

NEW QUESTION: 29

Which two are execution modes supported by gateway node in Integration API Platform Cloud Service?

A. Production

B. Development

C. Stage

D. Test

Answer: A,B (LEAVE A REPLY)

<https://docs.oracle.com/en/cloud/paas/api-platform-cloud/apfad/installing-gateway-node.html#GUID-A02059C9-37B4-40F0-9FEA-C648804BB98F>

NEW QUESTION: 30

You provision an Oracle SOA Cloud Service instance and specify a compute shape so that the JVM heap size for WebLogic Server and Load Balancer processes are determined automatically.

Which statement is correct after provisioning the instance in this scenario? (Choose the best answer.)

A. You can change the heap size by logging an Oracle Cloud Support Service Request.

B. You can change the heap size to a maximum of 32 GB.

C. You can change the heap size by using the Weblogic Server Administration Console.

D. You cannot change the heap size once the Service Instance is provisioned.

Answer: C (LEAVE A REPLY)

NEW QUESTION: 31

Which setting is used for a system that is hosting a web application to be allowed to access Oracle Internet of Things (IoT) Cloud Service resources?

- A. Cross-Origin Resource Sharing (CORS)
- B. Management Console Timeout Interval
- C. Message Storage and Command Notification
- D. OAuth Access Token Lifetime

Answer: A (LEAVE A REPLY)

The cross origin resource sharing setting specifies if the system that is hosting a web application is allowed to access Oracle IoT Cloud Service resources. The assumption is that the web application is running in a browser that is also implementing the CORS specification. Any browser based JavaScript client running on the specified host can access Oracle IoT REST APIs. However they will need to follow the Oracle IoT REST API authorization process to run any operations.

<https://docs.oracle.com/en/cloud/paas/iot-cloud/iotsu/setting-cross-origin-resource-sharing-value.html>

Valid 1Z0-1042-20 Dumps shared by PrepPdf.com for Helping Passing 1Z0-1042-20 Exam! NEW QUESTION: 32

What two grants allow an API Manager to use a service in their API?

- A. Manage Service
- B. View All Details
- C. Deploy Service
- D. Reference Service

Answer: B,C (LEAVE A REPLY)

<https://docs.oracle.com/en/cloud/paas/api-platform-cloud/apfad/managing-api-grants.html#GUID-18A50B0C-F14A-4FEE-BFEA-CA42265D35DA>

NEW QUESTION: 33

You want to configure SOA Cloud Service instance to allow for a cluster of three WebLogic server instances.

Which is a valid consideration when configuring the Load Balancer within your SOA instance?

- A. Each load balancer node will share the same public IP address utilizing virtual routing redundancy protocol (VRRP).

- B. A SOA instance can include up to three load balancer virtual machine nodes.
- C. Load balancer configuration may only be configured after the SOA instance cluster has been provisioned.
- D. Oracle Traffic Director (OTD) is the only available implementation option.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 34

Which three actions once they have been configured are allowed to be repositioned to another location within the design canvas of an orchestration style integration flow? (Choose three.)

- A. Stage File with Write File operation
- B. For Each
- C. Stage File with Read File in Segments operation
- D. Switch
- E. JavaScript Call
- F. Stage File with Read File operation

Answer: ([SHOW ANSWER](#))

Explanation/Reference:

NEW QUESTION: 35

Which two are ways the Oracle Internet of Things (IoT) Cloud Service environment can be accessed?

- A. using REST Interface
- B. Using a desktop client
- C. using SOAP Interface
- D. using Web Browser

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 36

Which two are NOT default start and end events in Process Cloud Service?

- A. Folder start and None end event
- B. SOAP start and SOAP end event
- C. None start and end event
- D. Task start and end event

Answer: ([SHOW ANSWER](#))

<https://docs.oracle.com/en/cloud/paas/process-cloud/user/defining-process-start-and-end.html#GUID-E3E20D7C-D135-419C-8750-F8D9147590D8>

NEW QUESTION: 37

You are designing an OIC integration that will be processing files in a shared file system located within your on-premises data center. You have decided to leverage various Stage File

action operations within the integration flow in conjunction with an on-premises OIC connectivity agent.

When using the Configure Stage File Action Wizard, which is a valid consideration regarding file operation capabilities?

- A. The Write File operation is not available for on-premises file systems.
- B. The List Files operation is still available for files uploaded through the connectivity agent.
- C. With regard to both the Read Entire File and Read File in Segments operations, files uploaded through the connectivity agent can only be read with a file reference.
- D. Files uploaded through the connectivity agent cannot be unzipped with the Unzip File operation using the file reference.

Answer: B (LEAVE A REPLY)

<https://docs.oracle.com/en/cloud/paas/integration-cloud/integrations-user/create-orchestrated-integrations.html#GUID-4357B1C8-0FBB-482F-9ED4-041ADE1B857F>

NEW QUESTION: 38

What options are available for Escalation and Expiration of human tasks in the Processes feature of OIC?

(Choose the best answer.)

- A. Escalate, Restart, Next, or Previous
- B. Renew, start, end, or error
- C. Never Escalate, Skip, hierarchy, or New
- D. Never expire, Expire, Renew, or Escalate

Answer: (SHOW ANSWER)

Explanation/Reference:

NEW QUESTION: 39

Which three statements are true about SOAP and the advantages it provides? (Choose three.)

- A. It provides flexibility for message format flexibility allowing for loose coupling between client and sever.
- B. It is platform and programming language independent.
- C. It leverages XML-based payloads to communicate between two client machines across any modern network.
- D. It commonly serves as a cleaning agent to remove excess data from the transmission protocol.
- E. As compared to RPC (remote procedure calls), which are sometimes blocked by firewall and proxy servers, SOAP over HTTP can overcome that limitation.
- F. SOAP clients can easily hold stateful references to remote server-side SOAP objects.

Answer: (SHOW ANSWER)

NEW QUESTION: 40

Which is NOT a key advantage of using Oracle Integration Cloud (OIC)?

- A. Public/Private Cloud Portability
- B. choice of IDE for development
- C. Auto Association of Oracle SaaS Applications
- D. prebuilt integrations
- E. recommendations

Answer: B (LEAVE A REPLY)

Reference:

<http://www.oracle.com/us/solutions/cloud/cloud-integration-wp-1873149.pdf>

NEW QUESTION: 41

Which two are types of style patterns available while creating integration with Oracle Integration Cloud (OIC)?

- A. Notification
- B. Metadata
- C. Orchestration
- D. Map Data

Answer: C,D (LEAVE A REPLY)

<https://docs.oracle.com/en/cloud/paas/integration-cloud-service/icsug/creating-integrations.html#GUID-FC613C76-F566-4673-BC10-CC893958C8D6>

NEW QUESTION: 42

Which two are valid considerations when leveraging the OIC connectivity agent for high availability on-premise environments?

- A. Each host on which the agent is installed must be configured on separate subnets assigned to the same OIC agent group.
- B. You should install the connectivity agents on the same host as the target application, then specify different agent group identifiers for each agent during its installation.
- C. You cannot have more than two agent instances per agent group. Attempting to include a third agent instance in the same group during installation results in an error.
- D. The File Adapter is not supported in high availability environments. When using the File Adapter and if some groups have multiple instances, use a dedicated agent group (with one agent only).
- E. You will need to have OIC ServiceDeployer role permissions in order to download and install the OIC on-premise connectivity agent.

Answer: C,D (LEAVE A REPLY)

<https://docs.oracle.com/en/cloud/paas/integration-cloud/integrations-user/agent-download-and-installation.html#GUID-0FA73D40-D238-46AD-A347-BB97D513FEB0> Use the Agent in High Availability Environments You can use the connectivity agent in high availability environments. You install the connectivity agent twice on different hosts. There are no

differences in agent installation. You specify the same agent group identifier during both installations.

Note the following details:

- * The File Adapter is not supported in high availability environments. When using the File Adapter and some groups have multiple instances, use a dedicated agent group (with one agent only).
- * Any new agent group created is enabled for high availability. Existing agent groups created prior to high availability being supported have no high availability capabilities and cannot be used.
- * You cannot have more than two agent instances per agent group. Attempting to include a third agent instance in the same group during installation results in an error.
- * While you can install up to two agent instances per agent group, be aware of the current restriction with agent high availability when working in tandem with automatically upgraded agents. To ensure that both agent instances do not upgrade at the exact same time, it is recommended that you start each instance with a small time gap. The time gap can be as little as 10 minutes. This ensures that there is no outage due to both agent instances being upgraded at the same time.
- * Ensure that both agent instances can access the same endpoints. For example, agent 1 on host 1 and agent 2 on host 2 must both be able to access the same endpoint (for example, a Siebel system).
- * Both hosts on which the agent is installed must have the same network setup.
- * To enable an older agent integration for high availability, you must create a new group, update the adapter connections in the integration to refer to the new group, and re-activate the integration.
- * You can install multiple agents on the same host. However, to utilize high availability capabilities, install the second agent on a second host.
- * Create a horizontal cluster to achieve high availability. Installing the agent on the same virtual machine (VM) does not guarantee high availability.

NEW QUESTION: 43

Which APIs does Oracle Internet of Things (IoT) Cloud Service use to perform an analysis?

- A.** Native Spark Java APIs
- B.** SQL Queries
- C.** JavaScript APIs
- D.** Big Data APIs

Answer: A (LEAVE A REPLY)

Oracle IoT Cloud Service uses native Spark Java APIs to perform the analysis. Developers can use the Batch and Streaming spark APIs to write the analytics processing logic. Developers can also import external APIs and use them in their application.

<https://docs.oracle.com/en/cloud/paas/iot-cloud/iotgs/analytics-oracle-iot-cloud-service.html>
