NEW QUESTION: 1

A firewall enabled as a decryption broker will take which of the following actions?

- A. correlate a series of related threat events that indicate a likely compromised host on the network
- B. forward clear text traffic to security chains for additional enforcement
- C. monitor the state of active connections to determine which network packets to allow through
- D. identify potential denial-of-service (DoS) attacks and take protective action

Answer: A (LEAVE A REPLY)

NEW QUESTION: 2

The Security Operations Center (SOC) has noticed that a user has large amounts of data going to and coming from an external encrypted website. The SOC would like to identify the data being sent to and received from this website.

Which Secure Sockets Layer (SSL) decryption method supported by Palo Alto Networks would allow the SOC to see this data?

- A. Forward Proxy
- B. Certificate Proxy
- C. Web Proxy
- D. Inbound Proxy

Answer: A (LEAVE A REPLY)

NEW QUESTION: 3

Which two of the following are benefits of the Palo Alto Networks Zero Trust architecture?

(Choose two.) Select 2 Correct Responses

- A. cloud-based virtual private network (VPN)
- B. more network segments
- C. tighter access control
- D. increased detection of threats and infiltration

Answer: C,D ([LEAVE A REPLY](#))

NEW QUESTION: 4

When deploying an Eval Next-Generation Firewall (NGFW) within a customer environment for the purpose of generating a Security Lifecycle Review (SLR) report, creation of which interface will not impact production traffic?

- A. SLR interface
- B. virtual wire interface
- C. Layer 3 interface
- D. TAP interface

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 5

Which Next-Generation Firewall (NGFW) deployment model allows an organization to monitor traffic during evaluations without interruption to network traffic?

- A. TAP mode
- B. Layer 3
- C. Layer 2
- D. virtual wire

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 6

Which of the following statements applies to enabling App-ID on a Next-Generation Firewall (NGFW)?

- A. An App-ID subscription must be purchased and enabled.
- B. No additional purchase is required, but App-ID must be enabled for the customer to use it.
- C. No configuration is required, because App-ID is always enabled by default.
- D. A Threat Protection license must be purchased and enabled.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 7

A customer has enabled the Threat Prevention subscription on their Palo Alto Networks Next-Generation Firewall.

How will the performance of the firewall be affected if the customer also enables both WildFire and User-ID?

- A. The maximum throughput performance will be reduced, but the impact will vary based on the firewall model being used.
- B. Enabling WildFire will have no additional performance impact, but enabling User-ID will reduce throughput.
- C. There will be no additional performance impact to the firewall, and throughput will remain the same, regardless of firewall model.
- D. Enabling User-ID will have no additional performance impact, but enabling WildFire will reduce throughput.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 8

The ability of a Next-Generation Firewall (NGFW) to logically group physical and virtual interfaces and then control traffic based on that grouping is known as what?

- A. security profile groups
- B. security zones
- C. LLDP profiles
- D. DHCP groups

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 9

An administrator wants to deploy a pair of firewalls in an active/active high availability (HA) architecture.

Which two deployment types are supported in this circumstance? (Choose two.) Select 2 Correct Responses

- A. Layer 3
- B. TAP mode
- C. Virtual Wire
- D. Layer 2

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 10

What are three unique benefits of the Palo Alto Networks Content-ID? (Choose three.) Select 3 Correct Responses

- A. proactively identifying and defending against unknown, new, or custom malware and exploits

- B. micro-segmenting network traffic based on the unique identification number of the content
- C. detecting and preventing known and unknown threats in a single pass
- D. increasing latency as new threat prevention features are enabled
- E. enforcing policy control over unapproved web surfing

Answer: A,C,E (LEAVE A REPLY)

NEW QUESTION: 11

Which architecture is unique to Palo Alto Networks and results in no additional performance overhead when enabling additional features?

- A. no-pass
- B. multiple-core threaded
- C. multi-pass
- D. single-pass

Answer: D (LEAVE A REPLY)
