### NEW QUESTION: 1

A Citrix Administrator needs to create custom Filters within Citrix Director to better monitor the infrastructure.

Which three values can the administrator choose to create the custom filters? (Choose three.)

- A. Connections
- B. Users
- C. Machines
- D. Sessions
- E. Desktops

**Answer: B,C,D (LEAVE A REPLY)**

In Citrix Director, administrators can create custom filters based on Users, Machines, and Sessions. These filters allow targeted monitoring and troubleshooting of specific areas within the Citrix environment.

### NEW QUESTION: 2

After creating a new machine catalog, a Citrix Administrator notices that the Virtual Delivery Agent (VDA) machines fail to register. What could the administrator have done to cause this condition?

- A. Selected an incompatible VDA functional level in Citrix Studio
- B. Selected an invalid VM naming scheme in Citrix Studio
- C. Failed to run the Citrix Health Assistant
- D. Failed to take a VM snapshot prior to creating the catalog

**Answer: A (LEAVE A REPLY)**

If an incompatible VDA functional level is selected when creating the machine catalog, the VDA machines cannot register with the Delivery Controllers. The functional level must match or be supported by the installed VDA software version.

**NEW QUESTION: 3**

Which type of certificate should a Citrix Administrator request so that a client endpoint can communicate with StoreFront over an encrypted connection?

- A. Root
- B. Intermediate
- C. Server
- D. Client

**Answer: C (LEAVE A REPLY)**

A server certificate must be installed on the StoreFront server to enable secure HTTPS communication. The client endpoint relies on this certificate to establish an encrypted TLS connection with StoreFront.

**NEW QUESTION: 4**

What are two methods of configuring AutoScale to power on machines as needed?  
(Choose two.)

- A. Desktop-Based
- B. Server-Based
- C. Schedule-Based
- D. Load-Based
- E. Host-Based

**Answer: C,D (LEAVE A REPLY)**

AutoScale can be configured using a schedule-based method, where machines power on/off according to defined time schedules, and a load-based method, where machines are powered on/off dynamically in response to user demand and load conditions. These two methods ensure resource optimization while maintaining user experience.

**NEW QUESTION: 5**

Which machine catalog supports the deployment of image updates using Citrix Studio?

- A. Remote PC Access
- B. Manual provisioning
- C. Citrix Provisioning
- D. Machine Creation Services

**Answer: D (LEAVE A REPLY)**

Machine Creation Services (MCS) integrates with Citrix Studio to manage and deploy image updates. When the master image is updated, MCS can roll out those changes to all machines in the catalog, making it the catalog type that supports image updates directly from Studio.

**NEW QUESTION: 6**

Which three database high availability features are supported for on-premises deployments of Citrix Virtual Apps and Desktops? (Choose three.)

- A. Clustered Instances
- B. Mirroring
- C. Automatic Storage Management
- D. Always On Availability Groups
- E. Flashback

**Answer: A,B,D (LEAVE A REPLY)**

Citrix Virtual Apps and Desktops supports Microsoft SQL Server high availability features such as Clustered Instances, Mirroring, and Always On Availability Groups for on-premises deployments.

These ensure database availability and resilience for the Site database.

### **NEW QUESTION: 7**

A Citrix Administrator is looking to provide apps and desktops to users. Project requirements dictate that management and maintenance should be minimized for the administrator, while still maintain control of the Virtual Delivery Agent (VDA machines). (Choose three.)

- A. Amazon Web Services
- B. Microsoft HyperV
- C. Nutanix Acropolis
- D. XenServer
- E. Google Cloud Platform
- F. Microsoft Azure

**Answer: A,E,F (LEAVE A REPLY)**

Using public cloud platforms such as AWS, GCP, or Azure with Citrix Cloud services minimizes infrastructure management and maintenance for the administrator, while still providing control over the VDA machines. The cloud provider handles most of the underlying infrastructure, reducing administrative overhead.

### **NEW QUESTION: 8**

Scenario: A StoreFront store supports 150 users who have full access to all enterprise resources.

A Citrix Administrator needs to create a new StoreFront store for contractors who will work onsite for two months. The contractors need access to specific resources but will NOT be Active Directory users.

Which option should the administrator select while creating the store for contractors?

- A. Unauthenticated
- B. Smart card
- C. Pass-through
- D. HTTP Basic

**Answer: A ([LEAVE A REPLY](#))**

**NEW QUESTION: 9**

By default, what is the printing behavior when no printing policy is configured?

- A. All client printers are auto-created.
- B. The Universal Print Server is enabled.
- C. The generic universal printer is automatically created.
- D. Direct connections to print servers are prohibited.

**Answer: ([SHOW ANSWER](#))**

**NEW QUESTION: 10**

Which components should be defined with the Resource Layer? (Choose three.)

- A. NetScaler Gateway
- B. StoreFront Stores
- C. Virtual Delivery Agents
- D. Citrix Virtual Apps and Desktop Sites
- E. Host Connections
- F. Citrix Virtual Apps and Desktop Zones
- G. Images
- H. Personalization settings

**Answer: C,E,G ([LEAVE A REPLY](#))**

The Resource Layer in Citrix Virtual Apps and Desktops defines the components that provide compute and application resources to users. This includes Virtual Delivery Agents (VDAs) that deliver apps and desktops, host connections to the underlying hypervisor or cloud, and images that serve as the basis for machine provisioning.

**NEW QUESTION: 11**

Scenario: A Citrix Administrator is configuring the Citrix Workspace app to allow users to access their applications and desktops. Management requires that users can log on to the environment from any device without having to remember the server address. What should the administrator do to meet these requirements?

- A. Allow users to download the configuration from Citrix.com.
- B. Deploy and configure the Citrix Workspace app using scripts.
- C. Configure the Citrix Workspace app using a Group Policy Template File.
- D. Configure a DNS Service Record for the Citrix Workspace app.

**Answer: D ([LEAVE A REPLY](#))**

By configuring a DNS SRV record pointing to the StoreFront or Citrix Gateway address, users can log on to Citrix Workspace without manually entering a server address. This allows seamless access from any device while meeting management's requirement for ease of use.

### NEW QUESTION: 12

Scenario: A Citrix Administrator needs to configure StoreFront to allow external users access to internal resources. The external users will authenticate on StoreFront. Which StoreFront authentication method can the administrator configure?

- A. Smart card
- B. Username and password
- C. HTTP Basic
- D. Pass-through from NetScaler Gateway

**Answer: (SHOW ANSWER)**

For external access, authentication is typically performed at Citrix NetScaler (now Citrix ADC).

StoreFront must then be configured with the "Pass-through from NetScaler Gateway" authentication method, allowing StoreFront to accept and trust the authentication performed externally.

### NEW QUESTION: 13

Scenario: A Citrix Administrator is investigating an issue in which a user's session does NOT successfully end after closing the last published application. The administrator used Task Manager to inspect the hanging session but could NOT find any relevant information. Which tool could the administrator use to get further details on orphaned processes in the session?

- A. Handle
- B. Procmon
- C. Process Explorer
- D. Regmon

**Answer: C (LEAVE A REPLY)**

Process Explorer provides detailed insight into running processes, their parent-child relationships, and resource usage. It is the best tool to identify orphaned processes that prevent a Citrix session from ending after the last application is closed.

### NEW QUESTION: 14

A Virtual Delivery Agent (VDA) is unable to register with the Delivery Controller. Which three factors could be causing this issue? (Choose three.)

- A. Improperly configured firewalls
- B. Time differences between VDA-enabled machines and the Domain Controller
- C. Incorrectly configured Citrix policy in Active Directory
- D. Incorrectly configured reverse DNS lookups in a forest
- E. Citrix ICA service NOT running

**Answer: A,B,E (LEAVE A REPLY)**

Improperly configured firewalls can block communication between the VDA and Delivery Controller.

Time differences greater than 5 minutes between the VDA and Domain Controller can prevent Kerberos authentication, leading to registration failure.

The Citrix ICA service (BrokerAgent) must be running for the VDA to register; if stopped, registration will fail.

#### **NEW QUESTION: 15**

What is the minimum permission a Citrix Administrator can grant to an IT manager to access Citrix Studio?

- A. Machine Catalog Administrator
- B. Host Administrator
- C. Delivery Group Administrator
- D. Read Only Administrator

**Answer: D (LEAVE A REPLY)**

#### **NEW QUESTION: 16**

Which step can a Citrix Administrator take in order to use the default compression policies?

- A. Select the compression algorithm (gzip/deflate/identity).
- B. Enable compression on the associated bound services.
- C. Disable the Citrix ADC Compression feature at a global level.
- D. Bind the default compression policies to the virtual server.

**Answer: D (LEAVE A REPLY)**

#### **NEW QUESTION: 17**

A user calls the help desk and states that launching a pooled random desktop takes as long as five minutes. Which Citrix Director report can a Citrix Administrator review to find out what might be causing the delay?

- A. Logon Performance
- B. Resource Utilization
- C. Connection Failures
- D. Load Evaluators

**Answer: A (LEAVE A REPLY)**

The Logon Performance report in Citrix Director breaks down the different phases of the logon process, such as authentication, profile loading, and group policy processing. Reviewing this report helps the administrator identify which phase is causing the long desktop launch times.

#### **NEW QUESTION: 18**

A Citrix Administrator is tasked with configuring Autoscale in an on-prem Citrix Virtual Apps and Desktops environment. However, when launching Citrix Studio and locating the Delivery Group, the option to Manage Autoscale is missing. What must the administrator do to enable and configure Autoscale using a GUI interface?

- A. Enable Autoscale using a Citrix Policy
- B. Use Citrix Web Studio instead of Citrix Studio
- C. use PowerShell to enable Autoscale
- D. Enable Autoscale using a GPO

**Answer: (SHOW ANSWER)**

Autoscale management is only available through Citrix Web Studio, not the traditional Citrix Studio console. To enable and configure Autoscale with a GUI, the administrator must use Web Studio.

#### **NEW QUESTION: 19**

A Citrix Administrator wishes to deploy catalogs of machines using Machine Creation Services.

Which two things must be configured and setup to accomplish this? (Choose two.)

- A. Citrix StoreFront
- B. Hosting Connection
- C. Citrix Delivery Controller
- D. Citrix Policies
- E. NetScaler Gateway

**Answer: B,C (LEAVE A REPLY)**

To deploy machine catalogs with Machine Creation Services (MCS), a hosting connection (to the hypervisor or cloud environment) must be configured to provide resources, and a Delivery Controller must be available to manage provisioning and brokering of the machines.

#### **NEW QUESTION: 20**

A Citrix Administrator is concerned about the TCP overhead associated with Citrix HDX connections. There are concerns about latency and TCP overhead associated with setting up a connection to Virtual Delivery Agent (VDA) resources. What technology should be deployed to move connections to UDP and improve the quality of the user experience?

- A. Citrix Optimizer
- B. Microsoft Teams Optimization

C. Browser Content Redirection

D. HDX Adaptive Transport

**Answer: D (LEAVE A REPLY)**

HDX Adaptive Transport uses Citrix's Enlightened Data Transport (EDT) protocol, which runs over UDP instead of TCP. This reduces latency, minimizes TCP overhead, and improves the quality and responsiveness of HDX sessions, especially in high-latency or lossy network conditions.

### **NEW QUESTION: 21**

Scenario: A user is working on a document in an HDX session and saves data on the desktop.

The Virtual Delivery Agent (VDA) session abruptly crashes, causing the saved data to be lost.

Which Citrix Profile Management policy can a Citrix Administrator enable to prevent data loss?

A. Profile Caching

B. Profile Streaming

C. Delay Cached Profile Deletion

D. Active Write Back

**Answer: (SHOW ANSWER)**

Active Write Back ensures that changes made during the session, such as saving files to the desktop, are written back to the user profile in real time. This prevents data loss if the VDA session crashes unexpectedly.

### **NEW QUESTION: 22**

What are three daily steps a Citrix Administrator should take to monitor a Citrix Virtual Apps and Desktops infrastructure? (Choose three.)

A. Check for warnings or alerts with Citrix Director.

B. Perform a capacity assessment.

C. Test environment access.

D. Check virtual machine power states.

E. Review available Citrix software upgrades.

F. Review Citrix policies.

**Answer: A,C,D (LEAVE A REPLY)**

Checking for warnings or alerts in Citrix Director helps quickly identify performance or availability issues.

Testing environment access ensures that users can log on and launch sessions without problems.

Checking virtual machine power states verifies that VDAs are powered on and available for user connections.

### NEW QUESTION: 23

Scenario: A Citrix Administrator maintains a Citrix Virtual Apps and Desktops Site with a large number of Windows users running various locally attached client printers. No network printers are being used. The administrator has enabled the HDX printer mapping policy to 'Auto-create all client printers', which has resulted in a large number of drivers being loaded onto the Virtual Delivery Agent (VDA) machines. New standards are requiring the administrator to limit these Windows drivers on the VDA machines. Which printing feature can the administrator enable to meet the new standards?

- A. The Auto-create PDF universal printer policy
- B. The Citrix Universal Print Server
- C. The Auto-create local (non-network) client printers only policy
- D. The Citrix Universal Printer Driver

**Answer: D (LEAVE A REPLY)**

Enabling the Citrix Universal Printer Driver allows client printers to be auto-created without requiring individual printer drivers to be installed on the VDA machines. This standardizes printing, reduces driver sprawl, and meets compliance requirements by minimizing the number of Windows drivers on the VDAs.

### NEW QUESTION: 24

Which layer contains the Site database in a Citrix Virtual Apps and Desktops Architecture model?

- A. Control
- B. User
- C. Access
- D. Resource

**Answer: C (LEAVE A REPLY)**
