NEW QUESTION: 1

An administrator receives an escalation to investigate a low disk space alarm on a datastore. The administrator discovers that a snapshot has been accidentally taken on a production, write-intensive database server. The snapshot has grown to nearly 1 TB in size in less than an hour and continues growing every second.

Which behavior should the administrator expect while deleting the snapshot? (Choose the best answer.)

- A. ESXi will create a virtual RAM disk to cache ongoing database write activity; performance impact will be limited.
- B. ESXi will commit the snapshot delta disk into the base disk; ongoing database write activity could result in long stun times.
- C. ESXi will merge the snapshot delta disk into the base disk; the virtual machine will be briefly stunned.
- D. ESXi will instantly switch from the base disk to the snapshot delta disk with no performance impact.

NEW QUESTION: 3

A single host is manually configured to company standards.

Which option would an administrator select to capture this configuration for future use?

- A. Attach Host Profile
- B. Extract Host Profile
- C. Import Host Profile
- D. Reset Host Customizations

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 4

An administrator is investigating the reason for a powered on virtual machine failing to migrate with the following error log message:

The virtual machine requires hardware features that are unsupported or disabled on the target host.

CPUID details: incompatibility at level 0xx register 'xxx'

Host bits: xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx

Required: xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx

Which step should the administrator complete to resolve this error? (Choose the best answer.)

- A. Configure High Availability on the cluster.
- B. Configure Distributed Resource Scheduler (DRS) on the cluster.
- C. Configure vSAN on the cluster.
- D. Configure Enhanced vMotion Compatibility on the cluster.

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 5

Which two statements are true regarding the use of firmware update packages in vSphere Lifecycle Manager? (Choose two.)

- A. A hardware support manager must be registered as a vCenter Server extension.
- B. The firmware and drivers add-on can be used on clusters that are managed with baselines.
- C. The firmware and drivers add-on is provided by a third-party vendor.
- D. The firmware and drivers add-on can add or remove components from the ESXi base image.
- E. The firmware and drivers add-on are distributed through the official VMware online depot.

NEW QUESTION: 15

An administrator places a 300 GB virtual machine named "Finance1" on a 2 TB datastore containing other virtual machines. After virtual machine placement, the datastore has 200 GB of free space. The accounting department takes a nightly snapshot of Finance1, then deletes the previous snapshot. The administrator is concerned about snapshots filling the datastore.

Which statement is true regarding snapshots? (Choose the best answer.)

- A. The snapshots on Finance1 will be automatically committed if SEsparse format is used.
- B. The snapshots on Finance1 cannot outgrow the datastore in less than 24 hours.
- C. vCenter Server will not allow snapshots to fill the datastore beyond 95%.
- D. Any snapshot on Finance1 has the potential to fill the datastore to capacity.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 16

Which step can an administrator take so that vSphere can access patch information if vCenter Server does NOT have Internet access?

- A. Install VMware vSphere Update Manager Download Service on a Windows server.
- B. Use an offline ISO file to import patches to the vSphere Lifecycle Manager depot manually.
- C. Install VMware vSphere Update Manager Download Service on a Linux server.
- D. Use a Web server on the vCenter Server machine to automate the transfer of files.

NEW QUESTION: 47

An administrator receives an escalation to investigate a low disk space alarm on a datastore. The administrator discovers that a snapshot has been accidentally taken on a production, write-intensive database server. The snapshot has grown to nearly 1 TB in size in less than an hour and continues growing every second.

Which behavior should the administrator expect while deleting the snapshot?

- A. ESXi will merge the snapshot delta disk into the base disk; the virtual machine will be briefly stunned.
- B. ESXi will instantly switch from the base disk to the snapshot delta disk with no performance impact.
- C. ESXi will create a virtual RAM disk to cache ongoing database write activity; performance impact will be limited.
- D. ESXi will commit the snapshot delta disk into the base disk; ongoing database write activity could result in long stun times.
